Receipt

The samples were received on 3/3/2023 2:35 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.0°C

Metals

Method 6020B: The continuing calibration verification (CCV) associated with batch 240-564732 recovered above the upper control limit for Beryllium. The samples associated with this CCV were below the reporting limit for the affected analyte; therefore, the data have been reported. The associated samples are impacted: BAC-03-F-20230303-01 (240-181320-1) and EB-001-F-20230303-01 (240-181320-2).

Method 6020B: The continuing calibration verification (CCV) associated with batch 240-564732 recovered above the upper control limit for Lithium. The samples associated with this CCV were below the reporting limit for the affected analyte; therefore, the data have been reported. The associated samples are impacted: BAC-03-F-20230303-01 (240-181320-1) and EB-001-F-20230303-01 (240-181320-2).

Method 6020B: The continuing calibration verification (CCV) associated with batch 240-564732 recovered above the upper control limit for Chromium. The samples associated with this CCV were below the reporting limit for the affected analyte; therefore, the data have been reported. The associated samples are impacted: BAC-03-F-20230303-01 (240-181320-1) and EB-001-F-20230303-01 (240-181320-2).

Method 9315_Ra226: Radium-226 prep batch 160-602832: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-03-F-20230303-01 (240-181320-1), EB-001-F-20230303-01 (240-181320-2), (LCS 160-602832/2-A), (LCSD 160-602832/25-A) and (MB 160-602832/1-A)

Method 9320_Ra228: Radium-228 batch 602838: The LCS/LCSD recovered at (143% / 130%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS/LCSD are not from this agency and are therefore held to our in-house statistical limits of (62-148%) per method requirements. The LCS/LCSD pass, no further action is required (LCS 160-602838/2-A) and (LCSD 160-602838/25-A)

Method 9320_Ra228: Radium-228 batch 602838: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-03-F-20230303-01 (240-181320-1), EB-001-F-20230303-01 (240-181320-2), (LCS 160-602838/2-A), (LCSD 160-602838/25-A) and (MB 160-602838/1-A)

The samples associated with this CCV were below the reporting limits for the affected analytes; therefore, the data have been reported. The associated samples are impacted: BAC-23-F-20230411-01 (240-183578-3), BAC-08-F-20230411-01 (240-183578-4), EB-001-F-20230411-01 (240-183578-7), BAC-07-F-20230412-01 (240-183578-8), BAC-18-F--20230412-01 (240-183578-9), BAC-06-F-20230412-01 (240-183578-10) and EB-001-F-20230412-01 (240-183578-12).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method 300.0_28D: The following sample(s) was analyzed outside of analytical holding time due to instrument error. Instrument motor went out and samples had to be rerun on second instrument. BAC-12-F-20230411-01 (240-183578-6) and EB-001-F-20230411-01 (240-183578-7).

Receipt

The samples were received on 8/19/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 0.5° C, 0.8° C, 1.0° C, 3.0° C and 24.1° C.

RAD

Method 9315: Radium-226 prep batch 160-625154: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-07-F-A4-20230817-01 (240-190433-1), BAC-18-F-A4-20230817-01 (240-190433-2), BAC-06-F-A4-20230817-01 (240-190433-3), BAC-06-F-A4-20230817-01 (240-190433-3[MS]), BAC-06-F-A4-20230817-01 (240-190433-3[MSD]), BAC-16-F-A4-20230817-01 (240-190433-4), BAC-08-F-A4-20230817-01 (240-190433-5), EB-001-F-4A-20230817-01 (240-190433-6), (LCS 160-625154/2-A) and (MB 160-625154/1-A)

Method 9320: Radium-228 batch 625155: The detection goal was not met for the following sample(s). Sample was prepped at a reduced volume due to the presence of matrix interferences: BAC-08-F-A4-20230817-01 (240-190433-5). Analytical results are reported with the detection limit achieved.

Method 9320: Radium-228 batch 625155: The matrix spike (MS) recoveries were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. BAC-06-F-A4-20230817-01 (240-190433-3[MS])

Method 9320: Radium-228 batch 625155: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Narrative

Job Narrative 240-193489-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method. Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 10/12/2023 2:25 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 0.5°C, 0.6°C, 3.5°C, 3.6°C, 3.8°C, 19.8°C and 20.2°C

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Narrative

Job Narrative 240-193601-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method. Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 10/14/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.7°C and 14.5°C

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Narrative

Job Narrative 240-193603-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method. Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 10/14/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.7°C and 14.5°C

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter

Method 9320_Ra228: Radium-228 prep batch 160-632483: The following sample(s) did not meet the requested limit (RL) due to the reduced sample volume attributed to the presence of matrix interference. During preparation the analyst visually noted matrix effects. The data have been reported with this narrative. BAC-14-F-A4-20231012-01 (240-193603-1) and BAC-12-F-A4-20231012-01 (240-193603-3)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Narrative

**Job Narrative
240-195797-1**

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method. Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The sample was received on 11/18/2023 8:00 AM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 5.4°C and 16.3°C

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative 240-195798-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The sample was received on 11/18/2023 8:00 AM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 5.4°C and 16.3°C

Methods 9320: Radium-228 batch 603171: The LCS recovered at (127%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. The LCS passes, no further action is required. (LCSD 160-603171/3-A)

Receipt

The samples were received on 3/3/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 1.7° C, 2.3° C, 2.5° C, 2.7° C and 14.5° C.

Methods 9320: Radium-228 batch 602829: The LCS recovered at (139%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not from this agency and are therefore held to our in-house statistical limits of (62-148%) per method requirements. The LCS passes, no further action is required. (LCSD 160-602829/3-A)

Method 6020B: The continuing calibration verification (CCV) associated with batch 240-564732 recovered above the upper control limit for Beryllium. The samples associated with this CCV were below the reporting limit for the affected analyte; therefore, the data have been reported. The associated samples are impacted: BAC-03-F-20230303-01 (240-181320-1) and EB-001-F-20230303-01 (240-181320-2).

Method 6020B: The continuing calibration verification (CCV) associated with batch 240-564732 recovered above the upper control limit for Lithium. The samples associated with this CCV were below the reporting limit for the affected analyte; therefore, the data have been reported. The associated samples are impacted: BAC-03-F-20230303-01 (240-181320-1) and EB-001-F-20230303-01 (240-181320-2).

Method 6020B: The continuing calibration verification (CCV) associated with batch 240-564732 recovered above the upper control limit for Chromium. The samples associated with this CCV were below the reporting limit for the affected analyte; therefore, the data have been reported. The associated samples are impacted: BAC-03-F-20230303-01 (240-181320-1) and EB-001-F-20230303-01 (240-181320-2).

Method 9315_Ra226: Radium-226 prep batch 160-602832: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-03-F-20230303-01 (240-181320-1), EB-001-F-20230303-01 (240-181320-2), (LCS 160-602832/2-A), (LCSD 160-602832/25-A) and (MB 160-602832/1-A)

Method 9320_Ra228: Radium-228 batch 602838: The LCS/LCSD recovered at (143% / 130%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS/LCSD are not from this agency and are therefore held to our in-house statistical limits of (62-148%) per method requirements. The LCS/LCSD pass, no further action is required (LCS 160-602838/2-A) and (LCSD 160-602838/25-A)

Method 9320_Ra228: Radium-228 batch 602838: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Narrative

Job Narrative 240-183578-1

Receipt

The samples were received on 4/14/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 12 coolers at receipt time were 1.1°C, 1.2°C, 1.4°C, 1.6°C, 1.8°C, 1.8°C, 2.0°C, 2.3°C, 2.6°C, 2.8°C, 3.2°C and 18.1°C

Metals

Method 6020B: The continuing calibration verification (CCV) associated with batch 240-570098 recovered above the upper control limit for Lithium. The samples associated with this CCV were below the reporting limits for the affected analytes; therefore, the data have been reported. The associated samples are impacted: BAC-23-F-20230411-01 (240-183578-3), BAC-08-F-20230411-01 (240-183578-4), EB-001-F-20230411-01 (240-183578-7), BAC-07-F-20230412-01 (240-183578-8), BAC-18-F--20230412-01 (240-183578-9), BAC-06-F-20230412-01 (240-183578-10) and EB-001-F-20230412-01 (240-183578-12).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method 300.0_28D: The following sample(s) was analyzed outside of analytical holding time due to instrument error. Instrument motor went out and samples had to be rerun on second instrument. BAC-12-F-20230411-01 (240-183578-6) and EB-001-F-20230411-01 (240-183578-7).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.
