EXECUTIVE SUMMARY

On behalf of Gavin Power, LLC (Gavin), ERM Consulting & Engineering, Inc. (ERM) has prepared this *2023 Annual Groundwater Monitoring and Corrective Action Report* summarizing groundwater monitoring activities at the Bottom Ash Pond (BAP) at the General James M. Gavin Power Plant (Plant) located in Cheshire, Ohio. The BAP is one of three regulated coal combustion residual (CCR) units at the Plant that are subject to regulation under Title 40, Code of Federal Regulations (CFR), Part 257, Subpart D (40 CFR § 257.50 *et seq.*), also known as the CCR Rule. A review of the CCR monitoring well network is documented in the *Updated Groundwater Monitoring System Evaluation and Certification—40 CFR 257.91* for the BAP (ERM 2021a).

This report documents the status of the groundwater monitoring program for the BAP, which includes the following as required by 40 CFR § 257.90(e):

- A description of the current program status;
- A summary of key actions completed;
- A description of problems encountered and actions taken to resolve the problems; and
- Identification of key activities for the coming year.

The BAP CCR unit groundwater monitoring program began 2023 in a “detection monitoring” program status as defined by 40 CFR § 257.94 and remained in detection monitoring at the end of the 2023 reporting period. Groundwater monitoring in 2023 consisted of two semi-annual monitoring events completed in March and September/October 2023 that included groundwater level measurements and subsequent groundwater sampling. Groundwater level measurements were used to construct updated groundwater potentiometric surface maps.

Groundwater samples were collected for laboratory analysis of CCR Rule Appendix III constituents, and the results were compared to previously calculated upgradient well prediction limits to identify statistically significant increases (SSIs) for downgradient wells. The following locations and analytes exhibited SSIs in 2023:

Well	Date Sampled	Boron	Calcium	Chloride	Fluoride	pH	Sulfate	Total Dissolved Solids (TDS)
BAC-02	Mar-2023	X	X	X	φ	X	X	X
	Sep/Oct-2023	X	X	X	X	φ	X	X
BAC-03	Mar-2023	X	φ	X	φ	X	X	φ
	Sep/Oct-2023	X	φ	X	φ	X	X	φ
BAC-04	Mar-2023	X	φ	X	φ	X	X	φ
	Sep/Oct-2023	X	φ	X	φ	X	X	φ
BAC-05	Mar-2023	X	φ	X	φ	X	X	X
	Sep/Oct-2023	X	φ	X	φ	X	X	X

Notes: φ = No SSI; X = SSI; SSI = statistically significant increase

Each identified SSI was evaluated in the corresponding attached Alternate Source Demonstration (ASD) Reports. The ASD reports identify regional background (total dissolved solids [TDS], calcium, chloride, and fluoride), and the North Fly Ash Pond (NFAP) at the adjacent Kyger Creek Generating Station (boron, pH, and sulfate) as the sources of these SSIs; therefore, the BAP groundwater monitoring system remained in detection monitoring at the conclusion of 2023. Accordingly, no remedial actions were selected, initiated, or performed in 2023.

Some of the matters addressed herein are also addressed in USEPA's November 22, 2022 Final Decision: Denial of Alternative Closure Deadline for General James M. Gavin Plant, Cheshire, Ohio (Final Decision). In response to the Final Decision, Gavin has explained how the approaches described and documented in this report are consistent with USEPA regulations and guidance as well as with best engineering practices and judgment. Gavin has contested USEPA's findings in the Final Decision from a factual, technical and legal perspective. We note that USEPA's findings and determinations in the Final Decision are the subject of pending litigation.

1. INTRODUCTION

The General James M. Gavin Power Plant is a coal-fired generating station located in Gallia County in Cheshire, Ohio, along the border between Ohio and West Virginia (Figure 1-1). The Plant contains three regulated CCR management units that are subject to regulation under Title 40, Code of Federal Regulations, Part 257, Subpart D (40 CFR § 257.50 *et seq.*), also known as the CCR Rule: the Residual Waste Landfill, the Fly Ash Reservoir, and the BAP. The BAP has a total surface land area of approximately 49.1 acres and is located south of the main Plant area and adjacent to the Ohio River. The BAP, together with the smaller Reclaim Pond, makes up the Bottom Ash Complex (BAC), which has operated since 1974. Bottom ash slurry was previously pumped into the BAP where the surficial water was decanted through a reinforced concrete drop inlet structure into the Reclaim Pond. The water in the Reclaim Pond is either pumped to the Plant for reuse or discharged to the Ohio River via an overflow structure subject to the Gavin National Pollution Discharge Elimination System permit. The Reclaim Pond was not designed to retain an accumulation of CCR; did not and does not receive any significant amount of CCR; and did not and does not treat, store, or dispose of CCR. Therefore, it is not subject to the CCR Rule.

The conversion of Units 1 and 2 to dry ash handling systems was completed and the placement of bottom ash in the BAP ceased in 2022. The BAP continued to receive miscellaneous Plant wastewaters including coal-pile runoff, cooling-tower blowdown, pyrites, and various Plant sump wastewaters until April 7, 2023. Dewatering activities of the BAP commenced the week of March 20, 2023. The BAP last received influent wastewater on April 7, 2023, at which time the flow was entirely diverted directly into the Reclaim Pond (or, for some wastewater streams, to a pretreatment system and then into the Reclaim Pond). Dewatering of the BAP continued through May 31, 2023 at which time the BAP was considered drained for ash removal.

ERM produced this report on behalf of Gavin. The report documents the status of the groundwater monitoring program for the BAP, which includes the following as required by 40 CFR § 257.90(e):

- A description of the current program status;
- A summary of key actions completed;
- A description of problems encountered and actions taken to resolve the problems; and
- Identification of key activities for the coming year.

Consistent with the notification requirements of the CCR Rule, this annual groundwater monitoring report will be posted to the Plant operating record no later than 31 January 2024 (40 CFR § 257.105(h)(1)). Within 30 days of placing the report in the operating record, notification will be made to the Ohio Environmental Protection Agency, and the report will be placed on the Plant publicly accessible internet site (40 CFR § 257.106(h)(1), 257.107(h)(1)). Table 1-1 cross-references the reporting requirements under the CCR Rule with the contents of this report.

2. PROGRAM STATUS § 257.90(E)

The BAP groundwater monitoring system began the 2023 reporting period in detection monitoring. SSIs were identified for the BAP groundwater monitoring network for boron, calcium, chloride, fluoride, pH, sulfate, and TDS in 2023. Regional background (calcium, chloride, fluoride (H2 only), and TDS), and the Kyger Creek NFAP (boron, pH, and sulfate) were identified as alternate sources for the SSIs. Therefore, the BAP remains in detection monitoring at the end of the 2023 reporting period.

3. BACKGROUND

3.1 DESCRIPTION OF CCR UNIT

The BAP previously received bottom ash, miscellaneous Plant wastewaters including coal-pile runoff, cooling-tower blowdown, pyrites, and various Plant sump wastewaters, and is subject to the CCR Rule. The conversion of Units 1 and 2 to dry ash handling systems was completed and the receipt of CCR waste streams in the BAP ceased in 2022. The BAP received non-CCR waste streams until April 7, 2023 at which time flow was diverted to temporary water treatment infrastructure and then directly into the Reclaim Pond.

Prior to April 7, 2023, the water from the BAP was decanted through a reinforced concrete drop inlet structure into the Reclaim Pond before discharge through a permitted outfall. The 6.7-acre Reclaim Pond abuts and is located to the northwest of the Bottom Ash Pond (Figure 3-1). The two ponds comprise the BAC. The Reclaim Pond was not designed to retain an accumulation of CCR; did not and does not receive significant amounts of CCR; and did not and does not treat, store, or dispose of CCR, and therefore is not subject to the CCR Rule. Because the Reclaim Pond is not a CCR unit, and does not require groundwater monitoring, this report and the associated groundwater monitoring system pertains only to the BAP.

Gavin plans to achieve closure of the BAP through removal of CCR. CCR was excavated from the BAP throughout 2023 and disposed of in Gavin's lined landfill. All CCR material was removed by December 16, 2023.

3.2 GEOLOGY AND HYDROGEOLOGY

3.2.1 REGIONAL GEOLOGIC HISTORY

The Plant is located in the southeastern region of Ohio within the Allegheny Section of the Appalachian Plateau. Bedrock in Gallia County consists of sedimentary series of Allegheny, Conemaugh and Monongahela formations of Pennsylvanian age that were deposited about 298 to 302 million years ago (mya) (ODNR, 2006). The general dip of the underlying bedrock is east-southeast. The stratigraphic arrangement of the bedrock series in the region generally follows a cyclothymic sequence, defined by a cyclic repetition of sedimentary beds (Blake, 1952). The sedimentary beds include sandstone, siltstone/claystone and coal. The thickness and lateral extent of these beds vary in the area due to numerous drainage systems incising the bedrock. A prominent erosional force, originating over 2.5 mya in the Tertiary Period, was the Teays River (ODNR, 1995). The Teays Rivers headwaters began in western North Carolina, and its vast network of tributaries flowed to the north and northwest into West Virginia, Ohio, Indiana and Illinois (Erjavec, 2018). As the river moved through the landscape, it eroded bedrock material and deposited thick fluvial (deposited by a river system) sands and gravels in southeastern and central Ohio (Stout et al. 1943).

As time continued into the Pleistocene epoch (1.6 mya to 11,000 years ago), multiple glacial lobes advanced over the landscape and divided Ohio into its glaciated and non-glaciated regions. Early Pleistocene glaciation covered the northern and western sections of Ohio extending to its limit in central Ohio, near Chillicothe (Szabo, 2011). The glaciers of the Early Pleistocene created a

blockade in central Ohio where the Teays River dammed and ponded, forming long/narrow lakes (termed finger lakes) extending throughout the Teays River tributary valleys. These finger lakes were generally interconnected, and the overall territory of these finger lakes is referred to as Lake Tight (ODNR, 1995). Lake Tight was between 0.79 to 0.88 mya, comparable in size to present day Lake Erie and expanded to the south and east from central Ohio into parts of West Virginia and Kentucky (Erjavec, 2018). The historical extent of Lake Tight included the southeastern portion of Ohio in which the Gavin Site and the BAP currently exists. Lake Tight became the dominant depositional environment, creating very thick lacustrine beds (sedimentary beds formed in a lake depositional environment) of clays, silts and fine sands that lay on top of the coarser sands and gravels. The geologic combination of these deposits is referred to as the Teays Formation (Hoyer, 1976).

When Lake Tight breached, a new drainage system formed called Deep Stage. The Deep Stage drainage system had a reversed flow direction from the Teays River, now flowing from north to south and southwest (Stout et. al, 1943; Tight 1903). Deep Stage deeply incised the Teays Formation, eroding down to bedrock in areas of southern Ohio and creating high elevation terraces made up of Lake Tight silts and clays. Deep Stage created the Pomeroy River, which was the origin for the historic and present-day Ohio River Valley system (Stout et. Al, 1943). During the Wisconsin glacial stage in the Late Pleistocene (~24,000 to 11,000 years ago), the historic Ohio River valleys filled with sediments from the fluvio-glacial outwash (eroded and/or deposited by flowing meltwater from glaciers) (Bergolc, 2004). The glacial meltwater rivers deposited coarser-grained sands and gravels, which filled the incised valleys where the former Teays deposits existed, and over time increased the base elevations of the historic Ohio River valleys (Ray, 1974; Hoyer, 1976).

As the historic Ohio River had periods of high-energy sedimentation due to increased glacial meltwaters, it also experienced periods of low-energy sedimentation as meltwaters depleted. Low-energy environments, such as fluvial floodplains, deposit finer grained materials including clays, silts, and fine sands (Dunne et al., 2013). These postglacial lower-energy deposits occurred through the Quaternary Period into the Holocene Epoch (10,000 years ago to recent) (Ray, 1974; Bergolc, 2004). Simultaneously, erosion of the surrounding historic Ohio River valley walls deposited alluvial and colluvial sediments made of the previously deposited finer-grained Lake Tight beds (Ray, 1974; Hoyer 1976; Nelson et. al, 2022). As such, a fining upward sequence was created from the deposition of the alluvial and colluvial sediments, along with the low-energy fluvial deposition. This fining-upward sequence exists as a younger, finer-grained unit consisting of clays, silts and fine sands overlying the older, coarser-grained glacial sands and gravels.

3.2.2 SITE-SPECIFIC GEOLOGY

Observation of bedrock cores collected around the BAP indicate the uppermost bedrock layers are claystone/siltstone (interpreted to be the Round Knob) and an underlying sandstone stratum (interpreted to be the Cow Run). A sharp lithological contact exists between the bedrock units and the overlying coarser-grained glacial sands and gravels. These coarser sediments, consisting primarily of medium to coarse sands and gravels, are buried by the younger, finer-grained unit, which exists as a laterally extensive layer of clays and silts. This younger, finer-grained unit is also

known as the separation layer, existing between the base of the BAP and the coarser sediments, which make up the alluvial aquifer below. Some fine-grained sands are also observed within the clays and silts within the separation layer, primarily being intermixed within the clay and silt matrix. However, two instances of interbedded fine sands, clays and/or silts have been described in the boring/well logs for B-0904 on the northern border of the neighboring Kyger Creek property in April 2009 and BAC-13, which was installed on the eastern berm of the BAP in 2022. The descriptions of interbedding in B-0904 and BAC-13 were both described at the base of the separation layer where contact exists with the deeper, coarser sands and gravels. These intervals of interbedding are not laterally or vertically extensive, as evidenced by lithologic observations in adjacent borings. As such, these few descriptions of interbedding are not considered to be representative of the clay and silt separation layer located above the coarse sand and gravel. Rather these may be isolated depositional instances. The wells installed in 2022 around the BAP area show general agreement in Site lithology and provide more detailed geologic descriptions of the sediments beneath the BAP than did historical borings/wells installed in the area.

3.2.3 SITE HYDROLOGY AND HYDROGEOLOGY

The uppermost aquifer beneath the BAP is approximately 20 to 40 feet thick and consists primarily of the coarser-grained sands and gravels described in section 3.2.2, though some fine sand is also present. Also referred to as the alluvial aquifer, the uppermost aquifer is confined by the clay and silt separation layer above and by the siltstone/claystone bedrock units below (Figure 3-2). The Ohio River acts as a hydraulic boundary condition to the east. Water supply wells FW-15 and FW-1101, which are operated by the Gavin plant, exist to the north of the BAP (Figure 3-3). These wells are screened within the alluvial aquifer and have 20-to-30-foot screens. Pumping activities at these wells has a significant influence on groundwater flow at the BAP. Two additional water supply wells, FW-17 and FW-1102, are operated by Gavin but are not expected to have a significant influence on groundwater at the BAP due to their distance from the BAP (0.4 to 0.5 miles to the north) and the infrequency of their use.

Five undisturbed Shelby tube samples of the separation layer were collected using a barge within the BAP in 2020 for laboratory grain size distribution and permeameter testing (ERM 2021a). The samples ranged from 0.9% to 32.3% sand and 67.7% to 99.1% silt and clay. The permeameter testing of these samples yielded hydraulic conductivity (K) values ranging from 1.44×10^{-8} cm/sec to 1.18×10^{-7} cm/sec. The CCR Rule design criteria for in-place closure of CCR materials within existing CCR units require final cover systems and bottom liners to have a minimum hydraulic conductivity of 1×10^{-5} cm/sec. The CCR Rule design criteria for new CCR landfills and any lateral expansion of a CCR landfill require a two-component liner system with an upper composite liner consisting of a 30-mil geomembrane liner underlain by a lower liner of at least a two-foot layer of compacted soil (or similar non-geomembrane layer) with a hydraulic conductivity of no more than 1×10^{-7} cm/sec. The average hydraulic conductivity of the upper portion of the separation layer is two orders of magnitude lower than that required for final cover systems and bottom liners of in-place closure of CCR materials. It is also within the same order of magnitude and not significantly different than the design criteria for the compacted soil layer of new CCR landfills and expansions. Additionally, total unit thickness of the separation layer is substantial, and it far exceeds the design requirement thickness for liner systems in new CCR landfills and expansions.

Slug tests were completed by ERM in 2022 at 16 well locations. Slug test summary statistics for wells screened in the alluvial aquifer and bedrock are provided in Table 3-1, and individual slug test results are provided in Table 3-2.

TABLE 3-1. SUMMARY OF SLUG TEST RESULTS

Geologic Unit	Average K (cm/sec)	Low K (cm/sec)	High K (cm/sec)
Alluvial Aquifer (13 wells)	6.99×10^{-2}	1.05×10^{-2}	4.12×10^{-1}
Bedrock (3 wells)	1.39×10^{-2}	2.65×10^{-8}	4.17×10^{-2}

Notes: cm/sec = centimeters per second; K = hydraulic conductivity

1. ERM 2022 slug tests at locations shown in Table 3-2 below.

TABLE 3-2. BAP SLUG TEST RESULTS BY WELL

Well	Geologic Unit	Estimated K (cm/sec)
BAC-01	Alluvial Aquifer	8.18×10^{-2}
BAC-02	Alluvial Aquifer	4.12×10^{-1}
BAC-04	Alluvial Aquifer	7.66×10^{-2}
BAC-05	Alluvial Aquifer	1.40×10^{-2}
BAC-06	Alluvial Aquifer	4.39×10^{-2}
BAC-07	Alluvial Aquifer	5.19×10^{-2}
BAC-08	Alluvial Aquifer	1.54×10^{-2}
BAC-09	Bedrock	1.23×10^{-6}
BAC-10	Alluvial Aquifer	7.35×10^{-2}
BAC-11	Bedrock	4.17×10^{-2}
BAC-12	Alluvial Aquifer	1.53×10^{-2}
BAC-16	Alluvial Aquifer	2.60×10^{-2}
BAC-18	Alluvial Aquifer	1.05×10^{-2}
BAC-19	Bedrock	2.65×10^{-8}
BAC-21	Alluvial Aquifer	4.43×10^{-2}
BAC-23	Alluvial Aquifer	4.37×10^{-2}

Notes: cm/sec = centimeters per second; K = hydraulic conductivity

3.3 MONITORING WELL NETWORK AND SUPPLEMENTAL WELLS

The certified BAP groundwater monitoring well network consists of five upgradient monitoring wells (BAC-01, MW-1, MW-6, BAC-06, and BAC-07) and four downgradient monitoring wells (BAC-02, BAC-03, BAC-04, and BAC-05). All network monitoring wells are screened in the uppermost aquifer (alluvial aquifer) around the BAP. In 2020, BAC-06 and BAC-07 were installed at the

southern boundary of the Bottom Ash Pond and in 2021, were incorporated into the updated monitoring network (ERM 2021b).

In 2022, sixteen supplemental monitoring wells were proposed and successfully installed in key areas around the BAP (ERM 2023). Nine wells were installed in the coarse-grained alluvium (BAC-08, BAC-10, BAC-12, BAC-14, BAC-16, BAC-18, BAC-21, BAC-22, and BAC-23) and four wells were installed in shallow bedrock (BAC-09, BAC-11, BAC-13, and BAC-19). BAC-15 and BAC-20 were installed in the fine-grained silt and clay layer. BAC-17 was installed to span the alluvial aquifer and the separation layer. This well was installed to emulate the construction of well B-0904 which was previously sampled by Gavin but is not on Gavin's property. Figure 3-3 provides the monitoring well locations, including both the certified monitoring well network wells (shown in yellow and blue) and supplemental wells not in the federal program (shown in purple), on the Site location map. A summary of the well construction information for wells around the BAP is located in Appendix A, and boring logs and well construction logs are located in Appendix B.

The upgradient wells are positioned to accurately represent the quality of background groundwater flowing from the west (BAC-01, MW-1, MW-6) and groundwater flowing from the south (BAC-06 and BAC-07) from Kyger Creek Generating Station's NFAP. The downgradient wells are positioned at the downgradient boundary where bottom ash was previously placed prior to excavation to detect potential releases of CCR constituents from the BAP into groundwater in the uppermost aquifer. In addition, monitoring well B-0904 has historically been used to provide supplemental information to the monitoring network. This monitoring well is screened in both the separation and alluvial aquifer. The well is not located on Gavin's property and access issues have prevented consistent sampling, therefore this well is not included in the certified monitoring network.

3.4 PREVIOUS GROUNDWATER MONITORING ACTIVITIES

The BAP monitoring wells were initially sampled eight times between August 2016 and July 2017 to establish upgradient well baseline data. Consistent with the CCR Rule and the *Groundwater Monitoring Plan Appendix G Statistical Analysis Plan* (ERM 2017), a prediction limit approach was used to identify potential future impacts to groundwater. After each semi-annual groundwater sampling event in July 2017, May and September 2018, March and September 2019, March and September 2020, March and September 2021, and March/April and October 2022, the results from the downgradient wells were compared to the prediction limits to identify SSIs. ASD Reports were developed for each sampling event discussing each SSI, which concluded that the SSIs resulted from alternate sources, and thus the CCR unit remained in detection monitoring (ERM 2018b; ERM 2019; ERM 2020; ERM 2021c; ERM 2022; ERM 2023).

4. MONITORING ACTIVITIES

4.1 GROUNDWATER POTENTIOMETRIC ELEVATION MONITORING

Programmable electronic data loggers equipped with a pressure-sensitive water level transducer were installed at wells around the BAP (BAC-02, BAC-10, BAC-04, BAC-12, BAC-16, BAC-18, BAC-08 and BAC-01) in 2023. These monitoring well locations were selected based on their placement and proximity to one another and to the BAP. Locations were selected to evaluate the potential for mounding at the BAP, provide more precise monitoring of horizontal groundwater flow direction, and/or evaluate the direction, frequency, and intensity of vertical gradients.

As a measure of data quality, transducer data were reviewed against corresponding manual water level measurements to ensure accuracy and consistency between the two datasets. In addition, a stilling well was installed in the Ohio River adjacent to the BAP to collect river stage elevation data, which was also reviewed with the transducer-based potentiometric elevations. During the transducer deployment periods, water supply wells FW-15 and FW-1101 (located north of the BAP) were cycled on and off which allowed an evaluation of potentiometric elevations under both pumping and non-pumping conditions. A transducer deployed at monitoring well BAC-11 did not record data as planned in December 2023, possibly due to a deployment error or equipment malfunction. In early 2024, Gavin has commenced research on the cause of the error and will implement procedures to accurately collect water level information with a transducer at well BAC-11 in 2024.

4.2 2023 SAMPLING SUMMARY

Groundwater samples were collected in 2023 as part of the detection monitoring program under 40 CFR § 257.94 and analyzed for the constituents listed in Appendix III to 40 CFR Part 257, Subpart D. Table 4-1 provides a summary of the 2023 sample dates and the well gradient designation (upgradient or downgradient) relative to the BAP. During the H1 2023 and H2 2023 sampling events, no significant field sampling issues were encountered, and therefore no actions were required for resolution. Samples were collected by bladder pump, were not filtered in the field or at the laboratory and were managed under chain-of-custody procedures from the field to the laboratory.

TABLE 4-1: SAMPLING DATES FOR EACH WELL

Monitoring Well	Location	Sampling Dates	
		H1	H2

MW-6	Upgradient	07 April 2023	29 September 2023

Notes: H1 = spring 2023; H2 = fall 2023

In order to obtain more information on groundwater quality surrounding the BAP, the supplemental monitoring wells installed in mid-2022 were analyzed for the constituents listed in Appendices III and IV.

In addition to the semiannual groundwater monitoring events at the Site required under 40 CFR § 257.94, supplemental samples were collected from wells BAC-06 and BAC-07 towards the required minimum of eight independent samples for each background well for the constituents listed in Appendices III and IV per the requirements of 40 CFR § 257.94(b).

4.3 DATA QUALITY

Samples collected during 2023 were analyzed by Eurofins Canton/Cleveland located in Barberton Ohio. All resulting field and laboratory documentation was reviewed to assess the validity, reliability, and usability of the analytical results. Data quality information reviewed included field sampling forms, chain-of-custody documentation, holding times, laboratory methods, laboratory method blanks, laboratory control sample recoveries, field duplicate samples, matrix spikes/matrix spike duplicates, quantitation limits, and equipment blanks. Data qualifiers were appended to the results in the project database as appropriate based on laboratory quality measurements (e.g., control sample recoveries) and field quality measurements (e.g., agreement between normal and field duplicate samples). The data quality review found the laboratory analytical results to be valid, reliable, and usable for decision-making purposes with the listed qualifiers. No analytical results were rejected.

5. MONITORING RESULTS

5.1 GROUNDWATER POTENTIOMETRIC CONTOURS AND FLOW DIRECTION

Synoptic gauging was completed in March 2023, September 2023 and November 2023 to collect depth to groundwater measurements. The March and September events were completed prior to semiannual sampling events. The synoptic gauging event completed in September 2023 was performed when nearby water supply wells FW-15 and FW-1101 were operational and actively pumping, and the gauging event on 29 November 2023 was conducted under non-pumping conditions. Resulting potentiometric elevations for each gauging round were calculated by subtracting the depth to groundwater from the surveyed reference elevation for each well. Groundwater potentiometric elevations, interpreted potentiometric surface maps, and interpreted groundwater flow directions for wells screened in the alluvium are presented on Figure 5-1 (2023 H1, non-pumping conditions), Figure 5-2 (2023 H2, pumping conditions), and Figure 5-3 (2023 H2, non-pumping conditions).

During the March gauging event, during which time the water supply wells FW-15 and FW-1101 were not active, the principal groundwater flow direction in the uppermost aquifer system (alluvial aquifer) under the BAP was from west to east with a northeasterly component of flow in the southern portion of the BAP (Figure 5-1). In the September 2023 gauging event, a stronger influence of the water supply wells FW-15 and FW-1101 was observed, resulting in groundwater flow from the south, west and east, toward the water supply wells which were operational at the time of the gauging event (Figure 5-2). In the November 2023 gauging event, when the water supply wells had been off approximately 48 hours, groundwater flow was generally from the southwest to the northeast (Figure 5-3). An evaluation of the potential for groundwater mounding at the BAP is included in the 2023 H2 ASD, included as Appendix D.

5.2 HYDRAULIC TESTING AND GROUNDWATER VELOCITY CALCULATION

The hydraulic gradient at the BAP is generally controlled by two main factors, the Ohio River and pumping of FW-15 and FW-1101, which contribute to the average groundwater-flow gradient to the northeast. The horizontal hydraulic gradients for the March 2023 and November 2023 gauging events, which occurred during non-pumping conditions, were generally to the east/northeast, toward the Ohio River. The horizontal hydraulic gradient for the September 2023 gauging event, which occurred while water supply wells FW-15 and FW-1101 were operational, was generally to the north, towards BAC-02 and BAC-10.

Measured horizontal hydraulic gradients across the BAP, as measured between MW-1 and BAC-03, were 0.0006 for the March 2023 event, 0.0008 for the September 2023 (pumping) event, and 0.0005 for the November 2023 (non-pumping) event. Based on the measured hydraulic gradients, an assumed porosity of 0.3, and an estimated average hydraulic conductivity of 6.99×10^{-2} cm/sec for the alluvial aquifer, the horizontal velocity of groundwater in the alluvial aquifer beneath the BAP varied between 130 and 140 feet per year under non-pumping conditions and was 200 feet per year in September under pumping conditions. These values are similar to but lower than the horizontal groundwater velocities calculated in 2022 (140 feet per year under non-pumping conditions, 290 feet per year under pumping conditions).

5.3 COMPARISON OF RESULTS TO PREDICTION LIMITS

Consistent with the CCR Rule and the *Statistical Analysis Plan* (ERM 2017) in the operating record, an interwell prediction limit approach was used to identify potential impacts to groundwater. Upper prediction limits were developed for the Appendix III parameters; in the case of pH, a lower prediction limit was also developed. The *2017 Annual Groundwater Monitoring and Corrective Action Report* (ERM 2018a) provides documentation of the development of the upper and lower prediction limits for the BAP.

5.3.1 2023 SAMPLING EVENT RESULTS

Table 5-4 identifies SSIs for the March (H1) and September/October (H2) 2023 monitoring events based on a comparison of the sampling results in downgradient wells to the prediction limits for the respective Appendix III analytes.

TABLE 5-1: SSIS FROM 2023 SAMPLING EVENTS

Analyte/Event	Monitoring Well							
	BAC-02		BAC-03		BAC-04		BAC-05	
	H1	H2	H1	H2	H1	H2	H1	H2
Boron	X	X	X	X	X	X	X	X
Calcium	X	X	φ	φ	φ	φ	φ	φ
Chloride	X	X	X	X	X	X	X	X
Fluoride	φ	X	φ	φ	φ	φ	φ	φ
pH	X	φ	X	X	X	X	X	X
Sulfate	X	X	X	X	X	X	X	X
TDS	X	X	φ	φ	φ	φ	X	X

Notes: φ = No SSI; X = SSI; SSI = statistically significant increase; TDS = total dissolved solids
Results are for the downgradient wells sampled in March (H1) and October/September (H2) 2023.

March 2023 SSIs were similar to those observed in 2017, 2018, 2019, 2020, 2021, and 2022. Alternate sources were identified consistent with the results of those previous analyses for each of the SSIs detected in the March 2023 data and were documented in the *Gavin BAP First Semiannual Sampling Event of 2023 ASD Report* which is included as Appendix C. The first half 2023 ASD report identified the regional discharge of groundwater as the source of calcium, chloride, and TDS, and the Kyger Creek NFAP as the source of boron, low pH, and sulfate.

September/October 2023 SSIs were also similar to those observed in 2017, 2018, 2019, 2020, 2021, and 2022. Alternate sources were identified for each of the SSIs associated with the September/October 2023 data and documented in the *Gavin BAP Second Semiannual Sampling Event of 2023 ASD Report*, which is included as Appendix D. The second half 2023 report identified the regional discharge of groundwater as the source of calcium, chloride, fluoride, and TDS, and the Kyger Creek NFAP as the source of boron, low pH, and sulfate.

Appendix E provides a summary of all historical and current analytical results obtained from the BAP groundwater monitoring program (including recent supplemental sampling). Appendix F contains laboratory analytical reports from both semi-annual sampling events.

6. KEY FUTURE ACTIVITIES

The following key future activities are planned for 2024:

- Groundwater Sampling
 - Two groundwater sampling events will be performed in 2024 at the BAP and the results will be compared to the prediction limits.
 - Monitoring wells that were installed in 2022 will be sampled and evaluated for addition to the certified monitoring network for use as background or compliance wells.
- Groundwater Hydraulic Monitoring
 - Up to four groundwater gauging events will be performed in 2024 at the BAP to establish hydraulic gradients under both pumping and non-pumping conditions.
 - Transducers will be downloaded, and the data processed and evaluated.
- Monitoring Network
 - The existing monitoring network will be evaluated for potential additional wells.

GAVIN BOTTOM ASH POND FIRST
SEMIANNUAL SAMPLING EVENT OF 2023
ALTERNATE SOURCE DEMONSTRATION
REPORT

Errata Sheet

Gavin Bottom Ash Pond

First Semiannual Sampling Event of 2023 Alternate Source Demonstration Report

31 January 2024

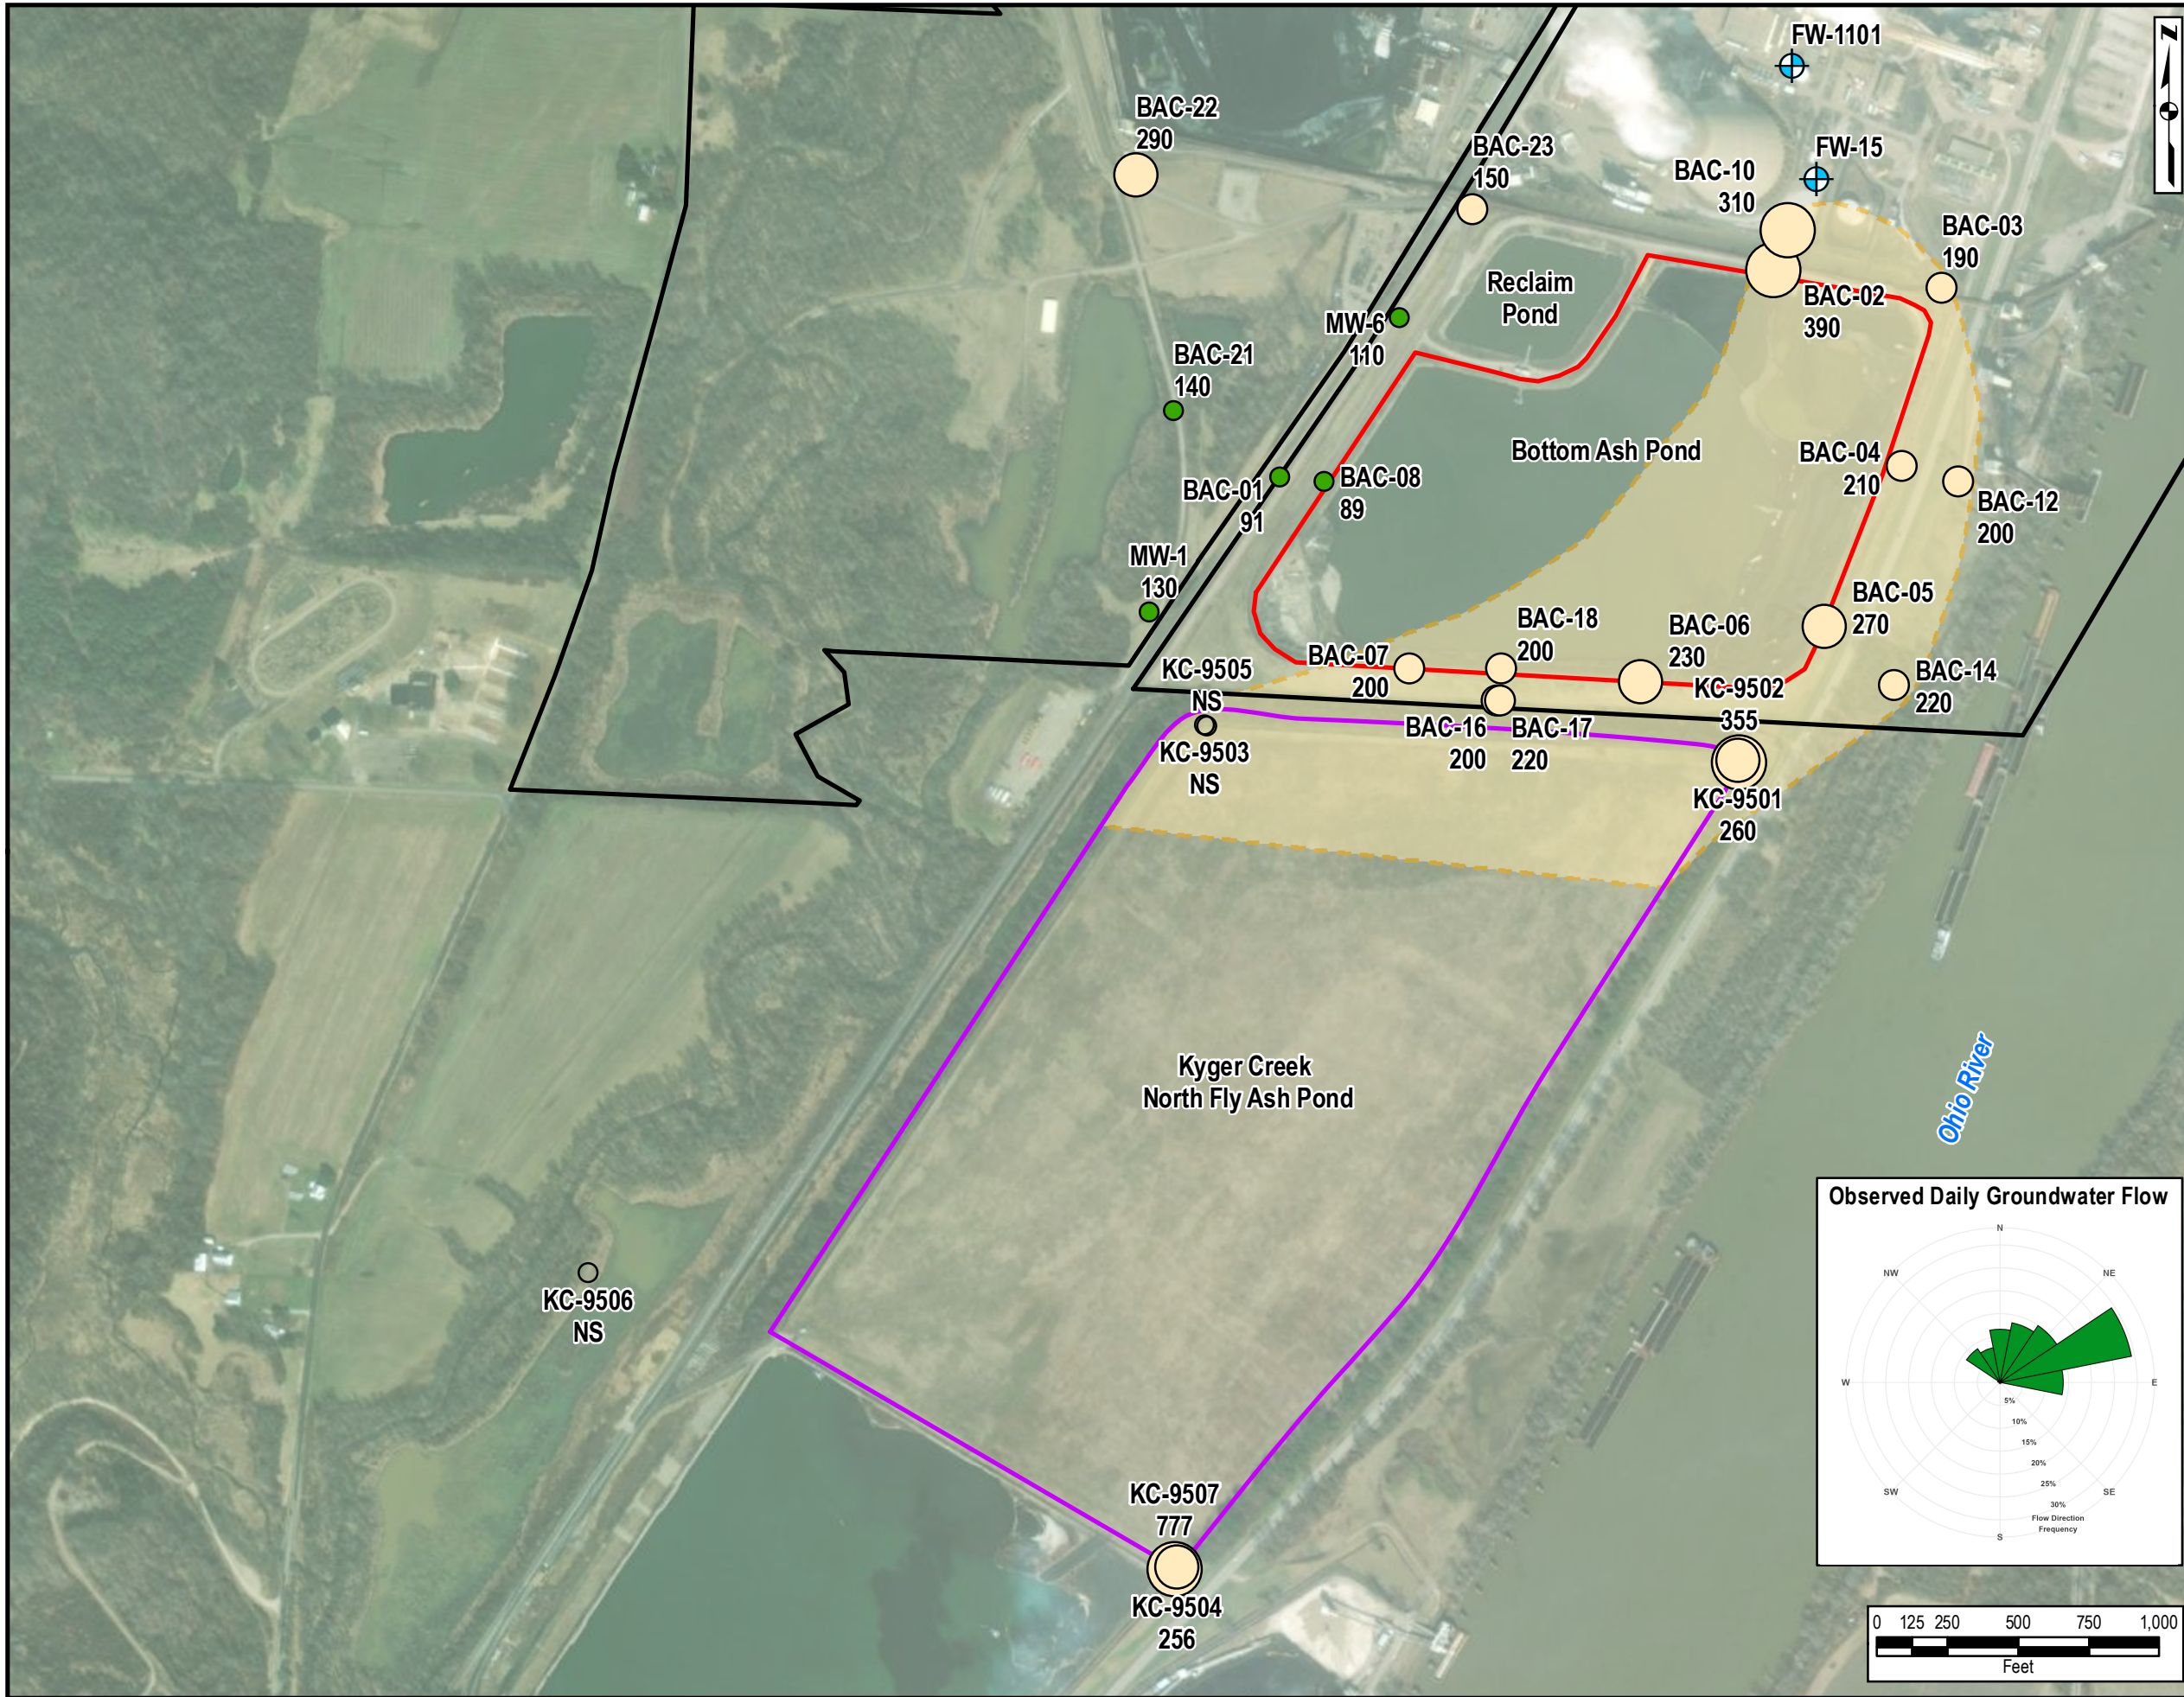

The following revisions have been incorporated into the **First Semiannual Sampling Event of 2023 Alternate Source Demonstration Report** dated 12 October 2023, as described in the following table.

Revision	Location	Description of Change
1	Figure 4-4	Replace Figure 4-4 (page 51 of this PDF), which inadvertently showed an incorrect plot of daily average groundwater flow directions, with an updated version (page 3 of this PDF), which includes an accurate plot of daily average groundwater flow directions between January 1 and June 30, 2023. Error in the original figure was due to an averaging error in MS Excel which has been corrected during the migration of the dataset to R Suite software in January 2024.
2	Figure 4-6	Replace Figure 4-6 (page 54 of this PDF), which inadvertently showed an incorrect plot of daily average groundwater flow directions, with an updated version (page 4 of this PDF), which includes an accurate plot of daily average groundwater flow directions between January 1 and June 30, 2023. Error in the original figure was due to an averaging error in MS Excel which has been corrected during the migration of the dataset to R Suite software in January 2024.

3

Figure 4-7

Replace Figure 4-7 (page 55 of this PDF), which inadvertently showed an incorrect plot of daily average groundwater flow directions, with an updated version (page 5 of this PDF), which includes an accurate plot of daily average groundwater flow directions between January 1 and June 30, 2023. Error in the original figure was due to an averaging error in MS Excel which has been corrected during the migration of the dataset to R Suite software in January 2024.

1. INTRODUCTION

1.1 Regulatory and Legal Framework

In accordance with Title 40 Code of Federal Regulations (CFR), Part 257, Subpart D – Standards for the Disposal of Coal Combustion Residuals (CCR) in Landfills and Surface Impoundments (CCR Rule) – Gavin Power, LLC (Gavin) has been implementing the groundwater monitoring requirements of 40 CFR § 257.90 *et seq.* for the Bottom Ash Pond (BAP) CCR Surface Impoundment at the General James M. Gavin Power Plant (Plant). Gavin calculated background levels and conducted statistical analyses for Appendix III constituents in accordance with 40 CFR § 257.93(h). Currently, Gavin is performing detection monitoring at the BAP in accordance with 40 CFR § 257.94. Statistically significant increases (SSIs) over background concentrations were detected in downgradient monitoring wells for Appendix III constituents for the first semiannual (H1) groundwater sampling event of 2023 and are explained in this Alternate Source Demonstration (ASD) Report.

An SSI for one or more Appendix III constituents is a potential indication of a release of constituents from a CCR unit to groundwater. In the event of an SSI, the CCR Rule provides that “... the owner or operator may demonstrate that a source other than the CCR unit caused the SSI over background levels for a constituent or that the SSI resulted from error in sampling, analysis, statistical evaluation, or natural variation in groundwater quality...” (40 CFR § 257.94(e)(2)). If it is demonstrated that the SSI is the result of a source other than the CCR unit, then the CCR unit may remain in the Detection Monitoring Program instead of transitioning to an Assessment Monitoring Program. To implement this demonstration, an ASD must be made in writing and the accuracy of the information must be verified through certification by a qualified Professional Engineer (40 CFR § 257.94(e)(2)).

The United States Environmental Protection Agency (USEPA) guidance document, “Solid Waste Disposal Facility Criteria Technical Manual, EPA530-R-93-017, Subpart E” (USEPA 1993), specifies the following six lines of evidence that must be addressed to determine whether an SSI resulted from a source other than the regulated disposal unit.

- An alternative source exists.
- A hydraulic connection exists between the alternative source and the well with a statistically significant increase.
- Constituent(s) (or precursor constituents) are present at the alternative source or along the flow path from the alternative source prior to possible release from the unit.
- The relative concentration and distribution of constituents in the zone of contamination are more strongly linked to the alternative source than to the unit when the fate and transport characteristics of the constituents are considered.
- The concentration observed in groundwater could not have resulted from the unit given the waste constituents and concentrations in the unit leachate and wastes, and the site hydrogeologic conditions.
- The data supporting conclusions regarding the alternative source are historically consistent with the hydrogeologic conditions and findings of the monitoring program.

This ASD Report addresses each of these lines of evidence for the SSIs detected in groundwater collected from downgradient compliance wells at the BAP. The groundwater monitoring program and ASD have been prepared utilizing accepted practices incorporating both site specific and regional information. In 2022, Gavin responded to feedback from the USEPA concerning the groundwater monitoring program at the BAP (USEPA 2022). In consideration of this feedback, Gavin has installed additional monitoring

wells and conducted supplemental characterization at the BAP to refine the conceptual site model (CSM). Findings and updates were originally provided in the 2022 Annual Groundwater Monitoring and Corrective Action Report (ERM 2023a) as well as discussed below.

1.2 Background

The Plant is a coal-fired generating station located in Gallia County in Cheshire, Ohio (Figure 1-1), and is bounded to the east by the Ohio River. The BAP is one of three CCR units at the Plant that are subject to regulation under the CCR Rule and is located adjacent to and immediately south of the main Plant area (Figure 1-2). Adjacent to the BAP is the smaller Reclaim Pond (Figure 1-3) which, along with the BAP, make up the Bottom Ash Complex (BAC) that has operated since 1974.

The certified groundwater monitoring well network consists of three upgradient monitoring wells (BAC-01, MW-1, and MW-6) along the western perimeter of the BAP, two upgradient monitoring wells (BAC-06 and BAC-07) along the southern perimeter, and four downgradient monitoring wells (BAC-02, BAC-03, BAC-04, and BAC-05) positioned along the northern and eastern perimeter of the BAP (Figure 1-3). These wells are herein referred to as "network" wells for the purposes of this report.

Consistent with the CCR Rule and the Groundwater Monitoring Plan developed for Gavin (ERM 2017), an interwell prediction limit approach was used to identify potential impacts to groundwater. Upper prediction limits, and a lower prediction limit specifically for pH, were established based on the upgradient groundwater data. The 2017 Annual Groundwater Monitoring and Corrective Action Report was prepared to document the status of the groundwater monitoring program for the BAP (ERM 2018a) and included results from eight sampling events performed from August 2016 to July 2017. The 2017 report and each subsequent Annual Groundwater Monitoring and Corrective Action Report have included comparisons of the sampling results obtained from downgradient wells during each semiannual detection monitoring event with the upper and lower prediction limits calculated based on the initial eight background samples taken from upgradient wells. ASD reports (ERM 2018b; ERM 2018c; ERM 2019a; ERM 2019b; ERM 2020a; ERM 2020b; ERM 2021b; ERM 2021c; ERM 2022a; ERM 2022b; ERM 2023b) were prepared to address SSIs that were identified during the initial and subsequent reporting periods.

Sixteen additional monitoring wells were installed in key areas around the BAP in 2022 (Figure 1-3). These wells have not yet been added to the certified network. These supplemental wells were strategically installed for data gathering purposes to enhance the CSM and better understand the dynamic hydraulics beneath and surrounding the BAP. Well construction details and boring logs are provided in the 2022 BAP Annual Groundwater Monitoring and Corrective Action Report (ERM 2023a). The supplemental wells installed in 2022 include:

- Nine (9) Alluvial Aquifer wells (BAC-08, BAC-10, BAC-12, BAC-14, BAC-16, BAC-18, BAC-21, BAC-22, and BAC-23) installed in the coarse-grained alluvium.
- Two (2) Separation Layer wells (BAC-15 and BAC-20) installed in the primarily fine-grained silt and clay layer overlying the alluvial aquifer.
- Four (4) Bedrock wells (BAC-09, BAC-11, BAC-13, and BAC-19) installed in shallow bedrock underlying the alluvial aquifer.
- One (1) Alluvial Aquifer and Separation Layer well (BAC-17) installed to span both the alluvial aquifer and separation layer geologic units. This well was installed to replicate the construction of well B-0904, which was previously sampled by Gavin but is no longer sampled because it is not on Gavin's property. Monitoring well BAC-17 has replaced B-0904 in alternate source evaluations to define the shallow groundwater quality migrating from Ohio Valley Electric Corporation's (OVEC) Kyger Creek North Fly Ash Pond (NFAP) towards the BAP.

1.3 Geology

Observation of bedrock cores collected around the BAP in 2022 indicates the uppermost bedrock layers are claystone/siltstone (interpreted to be the Round Knob) and an underlying sandstone stratum (interpreted to be the Cow Run). A sharp contact exists between the bedrock units and the overlying coarser-grained glacial sands and gravels. These coarser sediments, consisting primarily of medium to coarse sands and gravels, are buried by the younger, finer-grained unit, which exists as a laterally extensive layer of clays and silts. This younger, finer-grained unit (referred to as the separation layer), exists between the base of the BAP and the coarser sediments below (the uppermost aquifer). Some fine-grained sands are also observed within the separation layer, though they are primarily intermixed within the clay and silt matrix and generally found at depth, closer to the alluvial aquifer. Two instances of interbedded fine sands have been described in borings advanced around the BAP; one at boring B-0904 which was installed in 2009 on the northern border of the neighboring Kyger Creek property and the other at boring BAC-13, which was installed in 2022 on the eastern berm of the BAP. The interbedding at B-0904 and BAC-13 were both described at the base of the separation layer where contact exists with the deeper, coarser sands and gravels. These intervals of interbedding are not laterally or vertically extensive, as evidenced by lithologic observations in adjacent borings. As such, these limited descriptions of interbedding are not considered to be representative of the clay and silt separation layer located above the uppermost aquifer. Rather these may be isolated depositional instances. The supplemental wells installed in 2022 around the BAP area show general agreement in Site lithology and provide more detailed geologic descriptions of the sediments beneath the BAP than did historical borings/wells installed in the area.

1.4 Site Hydrology and Hydrogeology

The uppermost aquifer beneath the BAP area is approximately 20 to 40 feet thick and consists primarily of the coarser-grained sands and gravels described in section 1.3, though some fine sand is also present. Also referred to as the alluvial aquifer, the uppermost aquifer is confined by the clay and silt separation layer above and by the siltstone/claystone bedrock units below (Figure 1-4). The Ohio River acts as a hydraulic boundary condition to the east that is dynamic in nature due to fluctuations in river stage. Two water supply wells operated by the Gavin plant (FW-15 and FW-1101) exist approximately 400 to 700 feet north of the BAP (Figure 1-3). These wells have 20-to-30-foot screens established within the alluvial aquifer and have a significant influence on groundwater at the BAP, which is discussed further in Sections 4 and 5. Two additional water supply wells (FW-17 and FW-1102) exist approximately 0.4 to 0.5 miles further north and are not expected to have a significant influence on groundwater at the BAP due to their distance from the BAP and infrequency of their use. A wetland area exists to the west of the BAP, which contains naturally occurring ponds and wetland vegetation.

Five undisturbed Shelby tube samples of the separation layer were collected from a barge within the BAP in 2020 for laboratory grain size distribution and permeameter testing (ERM 2021a). The samples ranged from 0.9% to 32.3% sand and 67.7% to 99.1% silt and clay. The permeameter testing of these samples yielded hydraulic conductivity values (K values) ranging from 1.44E-08 cm/sec to 1.18E-07 cm/sec. Thus, even the samples with the highest amount of sand yielded very low K values. These data are direct evidence that the separation layer beneath the BAP acts as an aquitard to downward migration of water stored in the BAP.

1.5 2023 H1 Groundwater Sampling Event

The first semiannual groundwater sampling event of 2023 was performed in April 2023. The data from this sampling event were compared to the upper and lower prediction limits, and SSIs for Appendix III analytes were identified. Table 1-1 summarizes occurrences of SSIs from the April 2023 sampling event.

Table 1-1: SSIs in Groundwater beneath the BAP

Analyte	Monitoring Well			
	BAC-02	BAC-03	BAC-04	BAC-05
Boron	X	X	X	X
Calcium	X	φ	φ	φ
Chloride	X	X	X	X
Fluoride	φ	φ	φ	φ
pH	X	X	X	X
Sulfate	X	X	X	X
Total Dissolved Solids	X	φ	φ	X

Notes: φ = No SSI; X = SSI; BAP = Bottom Ash Pond; SSI = statistically significant increase.
Results are for the downgradient wells sampled in April 2023.

This ASD Report identifies the regional discharge of bedrock groundwater as the source of calcium, chloride, and total dissolved solids (TDS), and the Kyger Creek NFAP is identified as the source of boron, sulfate, and low pH. Earlier ASDs identified bedrock as the alternate source of sulfate; however, the alternate source identified for sulfate was revised in the H2 2022 ASD (ERM 2023b) based on new information obtained from the *Ohio Valley Electric Corporation Kyger Creek Station – Closed North Fly Ash Pond Groundwater Semiannual Data Analysis* (OVEC 2022). Supporting information and additional discussion of each of the lines of evidence are presented in subsequent sections of this ASD Report.

2. DESCRIPTION OF ALTERNATE SOURCES

Identified alternate sources for the Appendix III constituents that are observed at the BAP include:

- Regional Brine – Naturally occurring brine originating from bedrock (i.e., Cow Run Sandstone) as observed in shallow groundwater in and around Gavin. Identified as the alternate source of calcium, chloride, and TDS.
- Kyger Creek Generating Station Closed North Fly Ash Pond – CCR-impacted groundwater migrating from the Closed North Fly Ash Pond. Identified as the alternate source for boron, low pH, and sulfate.

Additional influence on groundwater quality at the BAP is observed from mixing of the alternate sources and upgradient alluvial aquifer groundwater from west of the BAP and/or surface water from the Ohio River.

A summary of each of these alternate sources and influences on groundwater quality is provided below.

2.1 Regional Brine

Naturally occurring brine, which is known to have elevated levels of chloride, fluoride, and other trace elements, exists in the subsurface in the Ohio River Valley (Stout et al. 1932; ORSANCO 1984; ODNR 1995). The discharge of brines is seen at a regional scale, with shallow wells near to the Ohio River observing brine impacts as a result of the vertical head gradient driving overall flow upwards from bedrock to alluvium (USGS 1997). The Cow Run Sandstone is the shallowest sandstone of any importance in Ohio where brine of marine origin has been observed (Phalen 1919; Stout et al. 1932). Brine was discovered at the land surface approximately 10 miles southwest of the Plant in Gallipolis, Ohio and was utilized for the commercial production of salt beginning in 1807 (Stout et al. 1932). Naturally occurring brine was also identified at the land surface in Jackson, Ohio approximately 30 miles west of the Plant (ODNR 1995). The regional presence of shallow brine indicates the potential for naturally occurring brine to contribute Appendix III constituents to groundwater at the Plant. Evidence of brine impacts near the Plant includes specific conductivity measurements at several monitoring wells upgradient of the Fly Ash Reservoir that are consistently greater than 10,000 $\mu\text{S}/\text{cm}$ and reach as high as 39,000 $\mu\text{S}/\text{cm}$. A brine signature was also observed in supplemental BAP monitoring well BAC-11 during sampling in April 2023. This signature included a specific conductivity field measurement of 48,189 $\mu\text{S}/\text{cm}$, TDS of 38,000 mg/L, and chloride levels of 23,000 mg/L. For reference, the approximate specific conductivity of seawater is 50,000 $\mu\text{S}/\text{cm}$ (USGS 2019).

The background groundwater data set is discussed further in Section 4.

2.2 Kyger Creek Generating Station

The Kyger Creek Generating Station is located along the Ohio River in Gallia County, south of and adjacent to the Gavin Plant (Figure 2-1). The Kyger Creek Fly Ash Pond complex consists of the 110-acre NFAP (closed) and 60-acre South Fly Ash Pond (SFAP). The construction history and groundwater monitoring results of these ponds are summarized in the first ASD Report (ERM 2018b). According to the approved Ohio Environmental Protection Agency (OEPA) Permit-to-Install (PTI), construction activities to close the NFAP were initiated in March 1998 and concluded in October 2000 (OVEC 2017). Semiannual groundwater sampling for PTI compliance at the NFAP has been performed since October 1997 and currently includes sampling of six monitoring wells (OEPA 1997). Per the PTI, samples are collected semiannually for:

- Groundwater Contamination Indicator Parameters – alkalinity, specific conductivity, sulfate, and total dissolved solids

- Groundwater Quality Parameters – barium, calcium, chloride, iron, lead, magnesium, manganese, selenium, sodium, gross alpha and gross beta, and pH

Groundwater monitoring for federal CCR compliance is performed at the SFAP only.

The closed Kyger Creek NFAP is located less than 300 feet from the Gavin BAP, and the units share an approximately 2,000-foot-long border (Figure 2-1). Gavin's network wells BAC-06 and BAC-07 were installed in 2020 at the top of the south berm along this boundary and screened within the alluvial aquifer. Six supplemental monitoring wells were installed along the south berm between the BAP and the Kyger Creek NFAP in 2022 to better understand the hydraulic relationship between the BAP and the NFAP and groundwater quality along the boundary. These supplemental wells include alluvial aquifer wells BAC-16 and BAC-18, separation layer wells BAC-15 and BAC-20, bedrock well BAC-19, and separation layer and alluvial aquifer well BAC-17.

The Kyger Creek NFAP has a higher potential to impact groundwater than the BAP because the Kyger Creek NFAP contains fly ash (approximately 1.7 million cubic yards), which when compared to bottom ash, has a greater potential to leach CCR constituents due to higher concentrations of CCR constituents and increased surface area due to smaller particle size (Cox et al. 1978; OEPA 1997; Jones et al. 2012), as described further in Section 7. The NFAP also contains approximately 900,000 cubic yards of boiler slag and boiler slag fines used to construct the NFPA berm and as cover material (OEPA 1997).

2.3 Upgradient Alluvial Aquifer Groundwater

Groundwater from upgradient of the BAP is observed at upgradient monitoring locations west of the BAP, including network wells MW-1, MW-6 and BAC-01, and supplemental wells BAC-08, BAC-21, BAC-22, and BAC-23. The upgradient status of these locations is confirmed by potentiometric surface maps which consistently show higher groundwater elevations west of the BAP than in wells north, south or east of the BAP. Potentiometric surface maps are presented and discussed further in Section 3. Groundwater from west of the BAP flows through the alluvial aquifer beneath the BAP where it ultimately mixes with groundwater migrating from Kyger Creek, groundwater discharging from bedrock, and surface water from the Ohio River.

2.4 Ohio River

The Ohio River extends approximately 981 river miles from Pittsburgh, Pennsylvania to Cairo, Illinois and drains an area of approximately 205,000 square miles (ORSANCO 2018). The Ohio River is located approximately 700 feet east of the BAP, and the alluvial aquifer beneath the BAP is hydraulically connected to the river.

While the Ohio River is not considered a source of impacts to groundwater under the BAP, the mixing of Ohio River surface water with groundwater does influence groundwater quality at the BAP through interaction of groundwater and river water (see Section 3). Surface water from the Ohio River enters the alluvial aquifer and interacts with groundwater beneath the BAP, driven by induced infiltration caused by pumping of the onsite water supply wells and during periods of rapidly rising and high river stage conditions (i.e., flooding). When the Ohio River floods, water from the river mixes with groundwater within the alluvial aquifer (ERM 2018b) beneath the BAP. The quality of the Ohio River water that mixes with groundwater is discussed in Section 4.

3. HYDRAULIC CONNECTIONS TO THE ALTERNATE SOURCES

Explanations of the hydraulic connections between potential alternate sources and the downgradient wells of the BAP were previously provided in the first ASD Report for the BAP (ERM 2018b). An updated summary of each of these connections is provided below.

3.1 Hydraulic Connection to Regional Brine

Regional groundwater within the fractured sedimentary bedrock in the Ohio River Valley generally flows from areas of higher topographic elevation towards areas of lower elevation, ultimately discharging to the Ohio River (ORSANCO 1984). Precipitation infiltrates the land surface to recharge the underlying aquifers below, and flow of groundwater within these aquifers is primarily driven by the gravitational force on groundwater (differences in hydraulic head) within the bedrock.

At the BAP, groundwater discharges upward from shallow fractured bedrock into the overlying alluvial aquifer. This upward discharge of groundwater from the bedrock aquifer to the overlying alluvial aquifer is attributable to three primary drivers:

- Higher hydraulic pressure (head) in the bedrock aquifer compared to the alluvial aquifer;
- Areas of high hydraulic conductivity related to the interconnected fracture network within the bedrock; and
- Active pumping conditions related to operation of the two water supply wells directly north of the BAP (FW-15 and FW-1101).

3.1.1 Hydraulic Conductivity

Groundwater flow within bedrock occurs primarily via flow through the network of interconnected and saturated fractures, which provides a much higher effective porosity (fracture/secondary porosity) than does the bedrock aquifer matrix (primary porosity). This is due to the effective pore size of the fractures (the ratio of volume of open fractures to the bulk volume of the bedrock matrix) as compared to the miniscule pore sizes between sedimentary grains making up the bedrock matrix. Consequently, the fracture network provides a flow system with significantly higher hydraulic conductivity than does the overall bedrock matrix porosity.

This network of fractures is highly heterogeneous, varying greatly in connectivity and conductivity from location to location. The fracture network is also anisotropic, which means the hydraulic conductivity varies in magnitude and direction at a particular location. As such, the occurrence of fracture interconnectivity and saturation varies greatly at a regional scale. In the Ohio River valley, stress relief fracturing in bedrock provides a structural framework for bedrock overlain by coarse glacial outwash alluvial deposits to be hydraulically interconnected (USGS 1981). The degree of stress fracturing is generally greatest in bedrock directly underlying the alluvial valley bottom, driving enhanced transmissivity of the fracture network in these areas (ERM 2023b). Such is the case of the Gavin plant BAP, where the Ohio River acts as a major regional groundwater discharge boundary, driving shallow brines towards the surface due to differences in hydraulic head.

Heterogeneity and anisotropy of the fracture network is clearly observed in the bedrock wells installed around the BAP. Hydraulic conductivity was measured to be $4.17\text{E-}02$ cm/sec at bedrock well BAC-11 where observations of significant fractures were made during drilling and geophysical logging. This high hydraulic conductivity value (K value) in BAC-11 is similar to K values measured in the alluvial aquifer. Conversely, substantially lower K values were measured at bedrock wells BAC-09 ($1.23\text{E-}06$ cm/sec) and BAC-19 ($2.65\text{E-}08$ cm/sec), where fewer instances of fracturing were observed. This difference in hydraulic conductivity values between wells screened within the same bedrock unit exemplifies the effect

of fracture network connectivity on hydraulic conductivity and helps to explain why some portions of the alluvial aquifer can be impacted by regional discharge (i.e., near BAC-02) while other areas may not be substantially influenced (i.e., near BAC-01 and BAC-18).

3.1.2 Influence of Pumping Conditions

As water is removed from the alluvial aquifer via pumping, it reduces the pressure that water within the aquifer exerts on the surrounding system. Under non-pumping conditions, the pressure head in the alluvial aquifer counteracts the pressure head in bedrock, decreasing upward vertical gradients and limiting upward migration of groundwater from bedrock. This relationship is more pronounced at couplet pairs BAC-02/BAC-11 and BAC-04/BAC-13 to the north and east and is less pronounced at couplet pairs BAC-01/BAC-09 and BAC-18/BAC-19 on the western and southern sides of the BAP where the effects of pumping are less noticeable due to their further distance from the water supply wells. When the water supply wells are actively pumping, the pressure head in the alluvial aquifer is diminished, allowing for a stronger upward migration of groundwater from bedrock to the alluvial aquifer, as observed at couplet BAC-02/BAC-11 under pumping conditions. A similar observation was made in wells BAC-04/BAC-13 along the eastern portion of the BAP, despite a smaller magnitude change in the resulting vertical gradient.

Vertical gradients were calculated for three gauging events performed in September 2022 (ERM 2023b). Results were depicted on three figures included with the report, which demonstrated consistent upward gradients in each of the four monitoring well couplet pairs around the BAP, under both pumping and non-pumping conditions. The results indicated that the steepest gradient exists in the well couplet closest to the river (east berm) under both pumping and non-pumping conditions. The upward gradient at the north berm was also relatively steep under pumping conditions. However, the vertical gradient at this well couplet decreased under non-pumping conditions due to reduced drawdown within the alluvial aquifer. Both the south berm and west berm couplets had relatively shallow upward gradients, and the difference between pumping and non-pumping observations was minimal, as expected given the distance to the pumping wells north of the BAP.

Comprehensive gauging was conducted in March 2023 to collect groundwater levels to be used in the evaluation of horizontal and vertical gradients. This gauging event took place under non-pumping conditions during a period when the Ohio river stage was 5 feet higher than it was during the September 2022 gauging events. The calculated vertical gradients for the March 2023 event were generally smaller than the gradients observed in 2022 under pumping conditions and were slightly negative. The negative gradients indicate that under conditions of elevated river stage and no pumping, there is a potential for downward hydraulic gradients from the alluvial to the bedrock aquifer. Given the short duration of most flooding events and the frequency of groundwater extraction operations, downward gradients are not expected to persist for extended periods of time. Results of the vertical gradient analysis for 2022 and 2023 are summarized in Table 3-1.

Table 3-1: Summary of Vertical Gradients at the BAP Boundary

Gauging Date	Pumping Condition	Vertical Gradients (ft/ft)			
		BAC-01/BAC-09	BAC-02/BAC-11	BAC-04/BAC-13	BAC-18/BAC-19
9 Sept 2022	Pumping	0.014	0.044	0.078	0.015
15 Sept 2022	Pumping	0.016	0.044	0.084	0.017
28 Sept 2022	Non-Pumping	0.010	0.003	0.061	0.004
23 March 2023	Non-Pumping	-0.006	-0.017	-0.019	-0.003

Note: Positive values represent upward vertical gradient.

To better understand the role of pumping on the dynamic flow field beneath the BAP, transducers were deployed in several wells around the BAP, and continuous long-term high-resolution groundwater elevation data was collected between August 2022 and April 2023. The results of this data indicate that pumping conditions occurred approximately 58% of the time over this period. This indicates that upward vertical gradients related to active pumping conditions were present for greater than half of the monitoring period and therefore, discharge of brine from the shallow bedrock to the overlying alluvial aquifer also occurred for the majority of the monitoring period.

In summary, the fractured sedimentary bedrock and alluvial aquifers are hydraulically connected, and groundwater is typically discharging from bedrock upward into the overlying alluvial aquifer (uppermost aquifer). This hydraulic connection varies spatially due to the heterogeneity and anisotropy of the fracture system, though it is evident that a stronger hydraulic connection exists in the northern and eastern areas of the BAP, closer to the Ohio River. The bedrock units beneath the BAP include the Round Knob and deeper Cow Run sandstone, which is known to contain regional brine (as described in Section 2.1), and upward vertical migration of water from the Cow Run sandstone to the alluvial aquifer beneath the BAP discharges brine to the alluvial aquifer. Additionally, the influence of active pumping as the prevalent groundwater condition exerts an amplified effect on the upward discharge of groundwater from bedrock to the alluvial aquifer.

3.2 Hydraulic Connection to Kyger Creek Generating Station

The installation of supplemental monitoring wells around the BAP in 2022 and implementation of transducers to collect continuous groundwater elevation data provided a higher resolution data set and contributed to an updated understanding of groundwater flow conditions surrounding the BAP area and particularly along the northern portion of the Kyger Creek NFAP. Although the naturally prevailing regional groundwater flow direction is from west to east toward the Ohio River, groundwater flow directions around the BAP are heavily influenced by pumping of Gavin water supply wells FW-15 and FW-1101 located to the north of the BAP. As shown from March 2023 groundwater elevation data, local groundwater flow directions on this day were primarily from west to east toward the Ohio River during non-pumping conditions (Figure 3-1). Groundwater elevations were not calculated in spring 2023 under pumping conditions; however, September 2022 results and the CSM indicate a strong north-northeasterly flow direction toward the water supply wells during pumping conditions (ERM 2023b). The impacts of pumping (and resulting drawdown) are clearly noticeable in wells located north and east of the BAP, and impacts were also evident in alluvial aquifer wells BAC-16 and BAC-18 along the southern boundary of the BAP near the NFAP, where drawdown of up to 0.50 feet was observed during pumping.

High resolution transducer data was evaluated to further analyze the effects of pumping on horizontal hydraulic gradients and flow directions in the alluvial aquifer beneath the BAP. The transducer data hydrographs for alluvial well couplet pairs were plotted with Ohio River stage for the period of August 2022 through April 2023, and horizontal gradients were calculated for each day of the monitoring period

using an R tool that calculates the best fit of a 2D plane to provided water levels based on the geometry of a given well-network. The approach was adapted from the EPA On-line Hydraulic Gradient Magnitude and Direction tool (USEPA 2021). The tool output is an overall flow vector magnitude and direction for the transducer network each day. The hydrograph for well couplet BAC-02 and BAC-10 was used to identify periods and approximate duration of pumping during the monitoring period due to the proximity of these wells to the water supply wells (Appendix A1), and pumping conditions were considered alongside calculated horizontal gradient vectors to determine the effects of pumping on horizontal gradients and flow direction at a higher resolution (Appendix A2-A6).

The results of this analysis revealed a nearly immediate response to pumping, regardless of whether one or both pumping wells were active (Appendix A2). Recovery response of the aquifer back to pre-pumping conditions was noticeable within one day after cessation of pumping, but recovery to the predominant natural groundwater flow direction (west to east) takes place gradually over the course of several days (Appendix A3). Aquifer response to rapid river stage changes indicated periods of steep gradients towards or away from the river depending on the specific moment relative to stage change (Appendix A4). Prior to the 23 March 2023 gauging event, pumps were on intermittently resulting in average flow in the northeasterly direction (Appendix A5). Given the predominant pumping condition during the transducer monitoring period (active pumping observed during approximately 58% of days), the prevailing flow direction for groundwater within the alluvial aquifer beneath the BAP was to the north-northeast (Appendix A6). It is critical to note that recovery of flow direction from north-northeast during pumping back to natural flow conditions (flow to the east) does not take place immediately. This delayed recovery effectively extends the duration of pumping-influenced flow directions and gradients, so the influence of pumping on flow conditions within the alluvial aquifer likely extends beyond the 58% of time calculated specifically for active pumping.

The following key points are associated with the interpreted groundwater flow paths:

- Due to the prevailing east-northeast regional and local groundwater flow direction, the Kyger Creek NFAP is not situated upgradient of the monitoring wells located along the western and northwestern areas of the Gavin BAP.
- Monitoring wells on the south side of the BAP are located downgradient of the Kyger Creek NFAP and upgradient of the BAP.
- During all groundwater flow conditions (pumping and non-pumping), the Kyger Creek NFAP is hydraulically upgradient of the monitoring wells along the southern and southeastern areas of the BAP.
- During pumping conditions, the Kyger Creek NFAP is hydraulically upgradient of the monitoring wells along the southern, eastern, and northeastern areas of the BAP.

It is evident that the Kyger Creek NFAP is hydraulically connected to the downgradient BAP monitoring wells (ERM 2018b; ERM 2021a; ERM 2023b) based on the prevalent northeastern direction of groundwater flow and the presence of the same alluvial aquifer beneath both the Kyger Creek NFAP and the Gavin BAP. Pumping activity of water supply wells FW-15 and FW-1101 creates a clear and nearly immediate anthropogenic influence on groundwater flow directions around the BAP, shifting groundwater flow northward, especially across the eastern half of the BAP. This shift in localized groundwater flow directions further orients the Kyger Creek NFAP as upgradient to a larger area of the BAP and results in an increased hydraulic connection between the Kyger Creek NFAP and the Gavin BAP.

4. CONSTITUENTS ARE PRESENT AT THE ALTERNATE SOURCES OR ALONG THE FLOW PATHWAYS

Groundwater quality at the BAP is influenced by multiple sources, as described in Sections 2 and 3. The Kyger Creek NFAP is identified as the source of boron, low pH, and sulfate. Regional brine is identified as the source of calcium, chloride, and TDS in BAP downgradient groundwater. Mixing of upgradient alluvial groundwater and water from the Ohio River also affect groundwater chemistry downgradient of the BAP. A summary of the constituents present at these sources is provided below.

4.1 Regional Brine

Regional brine is present in the area of the Gavin Plant and locally in bedrock under the BAP. Supplemental monitoring wells BAC-09, BAC-11, BAC-13, and BAC-19, which were installed in the Cow Run Sandstone at the BAP in 2022, all have chemical signatures indicating the presence of brine. The ranges for calcium, chloride, and TDS in bedrock groundwater and downgradient alluvial groundwater (BAC-02, BAC-03, BAC-04 and BAC-05) at the BAP is presented in Table 4-1.

Table 4-1: Comparison of Bedrock Groundwater to Downgradient BAP Groundwater

Analyte	Units	Bedrock Groundwater at BAP	Downgradient Alluvial Groundwater at BAP
Calcium	mg/L	84-2,200	74-140
Chloride	mg/L	870-23,000	35-76
TDS	mg/L	1,500-38,000	460-890

Notes: BAP = Bottom Ash Pond; mg/L = milligrams per liter; TDS = total dissolved solids. Results from samples collected in April 2023.

Cross section view figures for calcium (Figure 4-1a and 4-1b), chloride (Figure 4-2a and 4-2b), and TDS (Figure 4-3a and 4-3b) depict the distribution of concentrations for these three constituents within bedrock and the alluvial aquifer around the area of the BAP. Concentrations of calcium, chloride and TDS are generally one to two orders of magnitude higher in bedrock than in the overlying alluvial aquifer, consistent with a regional brine signature. Considering the upward hydraulic gradients observed at the bedrock/alluvium couplets and the higher concentrations of calcium, chloride and TDS in the bedrock groundwater, the SSIs in the alluvial aquifer are attributable to the discharge of groundwater from bedrock to the overlying alluvial aquifer.

4.2 Kyger Creek North Fly Ash Pond

4.2.1 Boron

Figure 4-4 depicts the distribution of boron concentrations across the BAP monitoring well network and the general horizontal flow path of boron from the northern boundary of the Kyger Creek NFAP under pumping conditions. This plume is consistent with the average observed daily groundwater flow vector as depicted on Figure 4-4, which is predominantly towards the north and/or east. The vector diagram summarizes transducer data collected from 25 August 2022 through 4 April 2023.

Boron concentrations and the approximated extent of boron impacts along the two primary flow directions (northeast and northward) from the Kyger Creek NFAP are also presented in cross section views (Figures 4-5a and 4-5b), as summarized by the following points:

- Monitoring well B-0904 is situated on Kyger Creek property downgradient of the Kyger Creek NFAP and upgradient of the BAP. Monitoring well B-0904 has historically had a higher boron concentration than any BAP well.
- BAC-17 was installed in 2022 as a replicant monitoring point for B-0904 (located on Kyger Creek property and inaccessible for sampling). BAC-17 is located downgradient of the Kyger Creek NFAP, upgradient of the BAP, and is screened in both the separation layer and into the underlying alluvial aquifer, mirroring the well screen of B-0904. The concentration of boron in BAC-17 was 3.6 mg/L in April 2023, a higher concentration than was observed in any downgradient well at the BAP. This concentration is consistent with the range historically observed at B-0904 of 3.7-4.2 mg/L boron.
- The concentration of boron in groundwater downgradient of the BAP ranged from 1.6 mg/L to 2.3 mg/L in the April 2023 samples. Contrarily, the most recent concentration of boron measured in surface water contained in the BAP was 0.44 mg/L in October 2022, and at upgradient wells BAC-01, MW-1, and MW-6 boron concentrations were less than 0.15 mg/L. Dewatering of the BAP has now commenced, and additional surface water measurements for boron will not be available.
- The highest boron concentrations in BAP downgradient wells were measured at wells BAC-04 and BAC-05, which are located nearest to and downgradient from the Kyger Creek NFAP.
- Concentrations of boron decrease with distance downgradient from the Kyger Creek NFAP, along the northeastern flow path (i.e., from BAC-05 to BAC-03).
- Monitoring wells BAC-06 and BAC-07 demonstrated slightly lower concentrations than measured in groundwater from monitoring well BAC-17 (and historically monitoring well B-0904), likely due to the slightly deeper position of the well screens combined with the mixing of water discharged from the underlying bedrock aquifer into the alluvial aquifer (Figure 4-4).

Correspondence obtained from the OEPA regarding Kyger Creek NFAP concluded that groundwater below the NFAP appears to be impacted by a release from the Kyger Creek NFAP and that an assessment of groundwater should be conducted (Appendix B and Appendix C). The Kyger Creek SFAP data also suggest that boron is present in groundwater below both Kyger Creek fly ash ponds. Table 4-2 summarizes boron analytical results from two groundwater sampling events conducted in March and October 2022 at monitoring wells downgradient of the Kyger Creek SFAP (AGES 2023). The highest concentrations were observed on the northeastern and southeastern boundaries of the SFAP. The northeastern boundary was interpreted to be downgradient from the Kyger Creek NFAP in 2020 (AGES 2021).

Table 4-2: Kyger Creek SFAP Boron 2022 Results

Analyte	Units	Maximum	Average
Boron	mg/L	16	8.1

Notes: mg/L = milligrams per liter; SFAP = South Fly Ash Pond.

The average concentration of boron (8.1 mg/L) in the Kyger Creek SFAP for 2022 is substantially higher than the maximum concentration of boron measured in groundwater beneath the BAP (2.3 mg/L) in April 2023 from network wells. The Kyger Creek SFAP and the now-closed NFAP both contain fly ash generated at the Kyger Creek Generating Station. As such, it is reasonable to expect that the chemical characteristics of the fly ash are similar in both units. Given the elevated boron concentrations in groundwater downgradient of the Kyger Creek SFAP and considering that both units are unlined, elevated concentrations of boron in groundwater downgradient of the Kyger Creek NFAP would be expected. Thus, this evidence supports the conclusion that boron is present in groundwater at the Kyger Creek Generating Station.

4.2.2 Sulfate

Figure 4-6 depicts the distribution of sulfate concentrations across the BAP monitoring well network and includes results from four Kyger Creek NFAP monitoring wells screened in the alluvial aquifer. Figure 4-6 also depicts the general horizontal flow path of sulfate from the northern boundary of the Kyger Creek NFAP under pumping conditions, along with the approximated extent of sulfate impacts from the Kyger Creek NFAP and around the BAP. This plume is consistent with the average observed daily groundwater flow vector as depicted on Figure 4-6, which is predominantly towards the north and/or east.

According to the December 2022 Kyger Creek Generating Station *Closed North Fly Ash Pond Groundwater Semiannual Data Analysis* (OVEC 2022), sulfate is present in wells surrounding the NFAP at concentrations exceeding those observed in groundwater around the BAP. Sulfate was present in monitoring well KC-9507 (located to the southeast of NFAP) at 777 mg/L and monitoring well KC-9502 (located to the northeast of the NFAP adjacent to the Gavin property boundary) at 355 mg/L.

4.2.3 pH

The pH of groundwater emanating from the Kyger Creek NFAP was previously measured in well B-0904 and was historically slightly acidic (ERM 2018b). Acidic pH results of 6.17 and 5.63 were measured at B-0904 replicant well BAC-17 in April 2023 and Kyger Creek well KC-9502 (located at the northeast corner of Kyger Creek property) in October 2022, respectively (OVEC 2022; Appendix A). The low pH at KC-9502 has been observed since 1997 (Appendix A) and was identified by OEPA in 1998 (OEPA 1998; Appendix B). Table 4-3 summarizes the pH data in groundwater in sources around the BAP.

Table 4-33: Groundwater and Surface Water pH Values

Location	pH (SU)
Kyger Creek NFAP: Upgradient BAP Groundwater (KC-9502; 25 October 2022)	5.63
Kyger Creek NFAP: Upgradient BAP Groundwater (B-0904; March 2020)	5.26
BAP: Upgradient Groundwater – Northwest (BAC-01, MW-1, and MW-6; April 2023)	6.54-7.14
BAP: Upgradient Groundwater – South (BAC-06, BAC-07, and BAC-17; April 2023)	6.15-6.57
BAP: Downgradient Groundwater (BAC-02 through BAC-05; April 2023)	5.99-6.23
BAP: Bedrock Groundwater (BAC-09, BAC-11, BAC-13, and BAC-19; April 2023)	7.31-7.79
Ohio River (October 2022)	6.89

Notes: BAP = Bottom Ash Pond; NFAP = North Fly Ash Pond; SU = Standard pH Units

The April 2023 results remain consistent with previous ASD Reports for the BAP (ERM 2018b, 2018c, 2019a, 2019b, 2020a, 2020b, 2021b, 2021c, 2022a, 2022b, 2023b). As shown in Figure 4-7, the distribution of pH and the northward flow direction demonstrate that low pH groundwater flows on-site from the Kyger Creek NFAP, where it mixes with upgradient alluvial groundwater, bedrock discharge, and water from the Ohio River, resulting in the intermediate pH observed in groundwater downgradient of the BAP. Monitoring wells BAC-06 and BAC-07 are not similarly impacted by acidic groundwater migrating from Kyger Creek, as evidenced by their higher pH. This is attributable to the well screens of BAC-06 and BAC-07 being substantially deeper than the well screens at B-0904 and BAC-17, lending to more influence by the regional discharge of groundwater from bedrock to the alluvial aquifer, as described further in Section 6.

5. LINKAGES OF CONSTITUENT CONCENTRATIONS AND DISTRIBUTIONS BETWEEN ALTERNATE SOURCES AND DOWNGRAIDENT WELLS

5.1 Regional Brine

As described in Section 3.1, groundwater typically discharges from bedrock upward into the overlying alluvial aquifer (uppermost aquifer). This hydraulic connection varies spatially due to the heterogeneity and anisotropy of the fracture system. The upward vertical migration of groundwater from the Cow Run sandstone to the alluvial aquifer beneath the BAP discharges brine to the alluvial aquifer. Additionally, the influence of active pumping as the prevalent groundwater condition exerts an amplified effect on the upward discharge of groundwater from bedrock to the alluvial aquifer.

Upward vertical gradients have been observed at all four locations around the BAP where bedrock and alluvial monitoring well couplet pairs are installed (ERM 2023b). Gradients were observed to be the steepest closest to the Gavin water supply wells and on the eastern side of the BAP nearest to the Ohio River. Pumping conditions were found to amplify upward vertical gradients by reducing pressure exerted by water within the alluvial aquifer, which normally counteracts pressure driving water upward from bedrock. The prevalence of pumping conditions (active pumping during approximately 58% of days) drives upward vertical gradients, which are steeper in areas of greater fracture density and interconnectedness within the bedrock aquifer. Additionally, delayed aquifer recovery from pumping conditions extends the duration under which the alluvial aquifer experiences upward vertical gradients related to pumping conditions.

Concentrations of calcium, chloride, and TDS in bedrock groundwater at the BAP as observed at BAC-11 are significantly higher than those observed in downgradient monitoring wells (Table 5-1). While the relative concentrations were lower at BAC-13 on the eastern side of the BAP, this may be due to lower connectivity and conductivity of the fracture sets. The measured hydraulic conductivity at BAC-11 was 4.17E-02 cm/sec, which is relatively high for bedrock and suggests that this well has a high degree of connectivity. Therefore, the relative concentrations observed in the downgradient monitoring wells are consistent with mixing of bedrock groundwater and groundwater from the alluvial aquifer.

Table 5-1: Ratio of Bedrock Groundwater to Downgradient BAP Groundwater for Regional Brine

Analyte	Units	Brine-Impacted Groundwater in Bedrock Beneath BAP (As measured at BAC-11)	Average Downgradient Well at BAP	Bedrock to Alluvial Aquifer Ratio
Calcium	mg/L	2,200	93	24:1
Chloride	mg/L	23,000	52	444:1
TDS	mg/L	38,000	588	65:1

Notes: BAP = Bottom Ash Pond; mg/L = milligrams per liter; TDS = total dissolved solids. Results from sample collected in April 2023.

5.2 Kyger Creek Generating Station

As described in Section 3.2 and Appendix C, the average direction of groundwater flow in the alluvial aquifer is to the north and east from Kyger Creek across the eastern side of the BAP towards the water supply wells. Figures 4-4 and 4-6 show the linkage for boron and sulfate between the alternate source and the downgradient monitoring wells. In addition, under non-pumping conditions (Figure 3-1), groundwater reverts to the eastward flow and constituents migrate towards the Ohio River.

5.2.1 Boron and Sulfate

The maximum boron concentration measured in onsite groundwater monitoring wells at the BAP was 3.6 mg/L at BAC-17. The average boron concentration observed at the adjacent SFAP in 2021 was 8.1 mg/L, with a maximum boron concentration reported to be 16 mg/L. The maximum sulfate concentration measured in upgradient onsite groundwater monitoring wells at the BAP was 290 mg/L at BAC-22 in spring 2023, while the maximum sulfate concentrations observed at the NFAP in fall 2022 were 355 mg/L in well KC-9502 located in the northeast corner of the NFAP and 777 mg/L in well KC-9507 located in the southeast corner of the NFAP. The ratio of the maximum Kyger Creek concentrations to the maximum downgradient BAP well is provided in Table 5-2. These ratios, and the predominance of pumping-influenced flow directions to the northeast demonstrate the linkage between boron and sulfate observed in downgradient BAP wells and Kyger Creek, the alternate source.

Table 5-2: Ratio of Kyger Creek Groundwater to Downgradient BAP Groundwater for Boron/Sulfate

Analyte	Units	Maximum Concentration			Ratio: Onsite to Downgradient BAP	Ratio: Kyger Creek to Downgradient BAP
		Onsite (BAC-17/ BAC-22)	Kyger Creek NFAP/SFAP (2022)	Downgradient BAP Well (BAC-02/BAC-05)		
Boron	mg/L	3.6	16	2.3	1.6	7:1
Sulfate	mg/L	290	777	390	0.7	2:1

Notes: BAP = Bottom Ash Pond; mg/L = milligrams per liter.

Results from Gavin samples collected in April 2023 and Kyger Creek samples collected in 2022.

5.2.2 pH

Table 5-3 summarizes the measured range of pH values measured at Kyger Creek, the BAP and the Ohio River. The observed pH SSIs at the BAP were below the lower prediction limit of 6.63, which was derived based on data from MW-1, BAC-01 and MW-6. BAP background groundwater, BAP bedrock groundwater and water from the Ohio River all have relatively neutral pH. Groundwater migrating from Kyger Creek NFAP has an acidic pH, as confirmed by the October 2022 pH measurement of 5.63 at monitoring well KC-9502, which is located approximately 150 feet south of the BAP. As discussed in Section 4.2.3, the low pH at KC-9502 has been observed since 1997 (Appendix A) and was identified by OEPA in 1998 (Appendix B). As discussed in Section 3, groundwater migrating northward from Kyger Creek mixes with upgradient groundwater migrating from the west and can mix with Ohio River water during high river stage conditions. This mixing of neutral and acidic waters causes groundwater at the downgradient BAP wells to become slightly acidic. These observations demonstrate the linkage between low pH groundwater observed in downgradient BAP wells and low pH groundwater from Kyger Creek, the alternate source.

Table 5-3: Comparison of Bedrock, Kyger Creek, and Downgradient BAP Groundwater for pH

Analyte	Units	Lowest Measured		Upgradient Wells West of BAP	Bedrock Wells	Ohio River	Downgradient BAP Wells (Mixing Area)
		Onsite BAP Well (BAC-07)	Kyger Creek NFAP (KC-9502)				
pH	SU	6.15	5.63	6.54 - 7.14	7.31 – 7.79	6.89	5.99 – 6.23

Notes: BAP = Bottom Ash Pond; SU = Standard pH Units.

Results from Gavin samples collected in April 2023, Ohio River and Kyger Creek samples collected in October 2022.

6. RELEASES FROM THE BAP ARE NOT SUPPORTED AS THE SOURCES

6.1 Evaluation of Groundwater Mounding at the BAP

Programmable electronic data loggers equipped with a pressure-sensitive water level transducer were installed at four alluvial aquifer monitoring well transects (eight monitoring wells) at the southern, western, northern, and eastern boundaries of the BAP to evaluate the potential for groundwater mounding. These monitoring well couplets were chosen based on their proximity to one another, and to the BAP. Each well couplet included a well on top of the berm directly adjacent to the BAP, and the other at the exterior base of the berm, which allowed for the evaluation of hydraulic heads and resulting hydraulic gradients between each couplet. A signature of mounding would be identified by consistently higher groundwater elevations at the well located at the top of the berm (closer to the BAP) compared to its counterpart at the base of the berm (further from the BAP). The four well couplet pairs included:

- BAC-01 (base of berm) and BAC-08 (top of berm), installed at the western boundary of the BAP
- BAC-10 (base of berm) and BAC-02 (top of berm), installed at the northern boundary of the BAP
- BAC-12 (base of berm) and BAC-04 (top of berm), installed at the eastern boundary of the BAP
- BAC-16 (base of berm) and BAC-18 (top of berm), installed at the southern boundary of the BAP

Groundwater elevations were compared over time for each well couplet to evaluate whether mounding was occurring. As a measure of data quality, transducer data were reviewed against corresponding manual water level measurements to ensure accuracy and consistency between the two datasets. In addition, a stilling well was installed in the Ohio River by permanently securing a steel pipe to a pier located in the river adjacent to the BAP. The top of the stilling well was surveyed which allowed manually and electronically recorded data to be converted to river stage elevation data, which was also reviewed against manual and transducer-based groundwater elevations. Transducers were deployed at the eight couplet wells between August 2022 and April 2023, with an intermittent period in October 2022 where data was not collected to allow for data download and other field activities. During the transducer deployment periods, water supply wells FW-15 and FW-1101 (located north of the BAP) were periodically cycled on and off for normal plant usage, which allows evaluation of groundwater elevations under both pumping and non-pumping conditions.

The conclusion of the initial analysis of data sets from August through December 2022 is that mounding at the BAP is not observed (ERM 2023b). Additional groundwater elevation data are being collected at the BAP in 2023, and a more comprehensive evaluation of the potential for groundwater mounding will be completed when long-term groundwater elevation trends become available.

6.2 Observed Boron Concentrations

Surface water samples at the BAP and Reclaim Pond were collected during each groundwater sampling event between 2016 and 2022. Boron has consistently been detected in surface water at 0.50 mg/L or lower, except for one event in 2019 when boron was measured at 1.30 mg/L, Table 6-1 compares the boron concentrations measured in surface water and monitoring wells. Based on this data, the boron concentration in the BAP surface water is too low to be the source of boron to the downgradient BAP wells. In contrast, groundwater flowing towards the BAP from under the Kyger Creek NFAP has consistently had a boron concentration higher than what is detected in downgradient groundwater. The average concentration at B-0904 from March 2018 to March 2020 was 3.95 mg/L, and BAC-17 had a boron concentration of 3.6 mg/L in April 2023, making the NFAP the most likely source.

Boron in the environment typically exists as boric acid or the borate ion. Both species are water-soluble and are not sensitive to redox conditions. Although adsorption/desorption reactions occur, adsorption is

strongest in slightly-to-moderately basic conditions (pH 7.5-10), which are not observed in groundwater around the BAP (ATSDR 2010). Therefore, it is not likely that oxidizing conditions present in surface water would impact boron concentrations in the BAP, nor is it likely that adsorption/desorption processes are significantly impacting the concentrations of boron in groundwater surrounding the BAP. Boron is expected to act as a conservative tracer due to its high solubility and mobility in water.

Table 6-1: Bottom Ash Pond Boron Results

Analyte	Units	Bottom Ash Pond ^a	Reclaim Pond ^a	Downgradient BAP Wells (Average) ^b
Boron	mg/L	0.44	0.51	2.0

^a Average sample results from February 2018 to October 2022

^b Sample results from April 2023

6.3 Chemical Fingerprints

The geochemical fingerprints of surface water from the BAP, from upgradient groundwater west of the BAP, from groundwater flowing from the Kyger Creek NFAP, and from surface water from the Ohio River were evaluated using the concentrations of parameters that are not expected to sorb strongly or participate in redox reactions. Boron, chloride, and potassium were chosen for these comparisons due to their high water solubility, limited redox chemistry, and presence in groundwater around the BAP. Boron-chloride and boron-potassium plots are shown in Figure 6-1 and Figure 6-2, respectively.

The samples presented on the concentration plots were collected from 2012 through 2023. The primary observations based on the concentration plots (Figures 6-1 and 6-2) are the following:

- Multiple samples collected from a single location (e.g., the Ohio River or Well BAC-01) tended to be tightly clustered, indicating that the chemical signatures of individual locations were consistent over time.
- Monitoring wells collected from a similar environment (i.e., upgradient wells located west of the BAP) tended to have similar concentrations and plot near each other.
- Groundwater from BAP upgradient wells MW-1, BAC-01, and MW-6 has a unique signature with relatively low boron, chloride, and potassium. The Ohio River has similar concentrations of boron and chloride, but generally has a higher concentration of potassium.
- Groundwater migrating from the Kyger Creek NFAP is captured by monitoring wells B-0904 and BAC-17, which was installed to replace B-0904. Concentrations of boron, chloride, and potassium at these wells are similar. These wells are characterized by high boron and low chloride and potassium.
- Groundwater from BAP downgradient wells BAC-02, BAC-03, BAC-04, and BAC-05 has a signature similar to groundwater migrating onto Gavin from the Kyger Creek NFAP (B-0904 and BAC-17). BAC-05, which is located closest to the Kyger Creek NFAP, plots closest to the Kyger Creek groundwater, followed by BAC-04, BAC-03, and BAC-02, respectively. This is consistent with their distance from the Kyger Creek NFAP. Groundwater at these wells is characterized by high boron, with elevated chloride and potassium relative to Kyger Creek groundwater due to the influence of bedrock groundwater. Supplemental monitoring wells BAC-12 and BAC-14 have chemical fingerprints consistent with other BAP downgradient wells. Groundwater local to monitoring well BAC-10 has slightly lower concentrations of boron, consistent with the attenuation of boron as groundwater flows away from the Kyger Creek NFAP.

- Groundwater from monitoring wells BAC-06 and BAC-07 show a distinct signature with similar concentrations of chloride and potassium to Kyger Creek groundwater, with lower but still elevated concentrations of boron. These wells are screened at a deeper interval than B-0904 and BAC-17, indicating that the boron plume flowing from the Kyger Creek NFAP is primarily located in shallower groundwater. Supplemental monitoring wells BAC-16 and BAC-18 have chemical fingerprints consistent with those at BAC-06 and BAC-07.
- Groundwater from supplemental bedrock wells BAC-09, BAC-11, BAC-13, and BAC-19 have a unique signature with moderate concentrations of boron (comparable to those observed at some upgradient locations) and very high chloride. Chloride concentrations are up to three orders of magnitude higher in bedrock groundwater than in alluvial background groundwater.
- Groundwater from supplemental upgradient monitoring wells located farther to west (BAC-21 and BAC-22) or to the northwest of the BAP (BAC-23) have a signature distinct from upgradient groundwater collected from the historical locations. Concentrations of boron, chloride, and potassium are slightly higher in these locations than in the historical upgradient wells.
- Groundwater from supplemental separation layer monitoring well BAC-15 has a distinct signature characterized by moderate boron and potassium and very low chloride. This well has limited connectivity to surrounding groundwater due to the low hydraulic conductivity of the separation layer.
- BAP surface water has a signature distinct from downgradient groundwater, characterized by moderate boron and chloride, with potassium concentrations higher than both upgradient and downgradient groundwater.

Based on the data summarized above and the chemical fingerprints of the groundwater at issue, the BAP is not deemed to be the source of the SSIs.

7. ALTERNATE SOURCE DATA ARE HISTORICALLY CONSISTENT WITH HYDROGEOLOGIC CONDITIONS AND FINDINGS OF THE MONITORING PROGRAM

7.1 Regional Brine

This ASD Report provides background groundwater quality data for the fractured sedimentary bedrock aquifers that underlie the Plant and surrounding area. Regional groundwater flow regimes through fractured bedrock near the BAP were established after the last deglaciation, which occurred approximately 14,000 years ago (Hansen 2017). Assuming a conservatively high effective porosity of 1 percent, estimated groundwater velocity values for the Morgantown Sandstone and Cow Run Sandstone units are approximately 78 feet per year and 45 feet per year, respectively. These flow rates would allow ample time for groundwater to migrate from upgradient regional background sources to Plant property. The data supporting these conclusions are historically consistent with hydrogeologic conditions and findings of the BAP monitoring program.

Enhancement of transmissivity in Ohio River Valley from stress-relief fracturing in bedrock provides conditions for bedrock to be interconnected to coarse glacial outwash alluvial deposits (USGS 1981; USGS, 1997). The discharge of brines is seen at a regional scale along the Ohio River with shallow wells near the Ohio River observing saltwater impacts; whereas, further from the Ohio River shallow wells report little to no brine impacts (USGS 1997). At the site, upward gradients between bedrock and alluvial wells near the Ohio River are observed along the BAP, and locations with the strongest upward gradients generally have high hydraulic conductivities, which supports the conclusion that bedrock and alluvial aquifers are hydraulically connected on-Site with the predominant flow direction being upward. Additionally, the influence of pumping conditions further contributes to upward vertical gradients, as described in previous sections. Total dissolved solids concentrations observed in bedrock wells around the BAP are consistent with observations seen at brine-freshwater mixing zones at other brine-impacted sites (Yager et al. 2017). Therefore, the regional and site-scale data are in strong agreement, and lead to the conclusion that regional brines are discharging under the BAP and mixing with alluvial groundwater underneath the BAP.

7.2 Kyger Creek Generating Station

The Kyger Creek NFAP was constructed in 1955 on a native soil base and without an engineered liner system to capture and contain leachate. The unit was used to manage fly ash until it was drained and closed from 1998 to 2000. However, despite closure, ash is still present within the Kyger Creek NFAP (AEP 1994). The NFAP was not capped with a low permeability barrier at the land surface, and therefore no barrier exists to prevent infiltration of precipitation, subsequent migration of water through highly-leachable CCR materials in the subsurface, and resulting recharge of boron-impacted water to the alluvial aquifer. Approximately 900,000 cubic yards of boiler slag and boiler slag fines were also used as surface fill and as material to build berms. Both materials yielded low pH samples during leachability testing (OEPA 1997).

Groundwater in the alluvial aquifer flows from the Kyger Creek NFAP in a northeasterly direction toward the Gavin BAP. Given the six decades that this unit has contained fly ash and the alluvial aquifer groundwater velocity estimates of 140 to 290 feet per year, ample time has passed for groundwater to migrate from the Kyger Creek NFAP beneath the BAP. The following evidence therefore supports that the Kyger Creek NFAP is the alternate source of boron, sulfate, and low pH:

- The low concentration of boron in water from the BAP and the distribution of boron in groundwater beneath the BAP (Section 4 and Section 6).

- Analytical results from groundwater samples collected for the Kyger Creek NFAP and SFAP suggest boron and sulfate are present in Kyger Creek groundwater and groundwater has an acidic pH. Given the similarity in construction and types of CCR managed, it is reasonable to interpret Kyger Creek SFAP groundwater results for boron are also representative of Kyger Creek NFAP groundwater quality (Section 4).
- The chemical fingerprinting evidence suggests groundwater from Kyger Creek mixes with upgradient groundwater from west of the BAP, groundwater discharging from the bedrock, and water from the Ohio River water under the eastern portion of the BAP (Section 6).
- The OEPA has concluded that groundwater appears to be impacted by a release (i.e., elevated conductivity, sulfate, TDS, and low pH) from the Kyger Creek NFAP (Appendix A and Appendix B).

In addition, a comparison of the materials managed provides evidence that the BAP is not the source of boron – that the Kyger Creek NFAP is a more likely source of boron. The Kyger Creek NFAP has contained fly ash since 1955, while the BAP has been used primarily for the management of bottom ash since 1974. Bottom ash and fly ash have different physical and chemical properties; laboratory investigations have demonstrated elements (including Appendix III constituents) have a much greater potential to leach from fly ash compared to bottom ash (Cox et al. 1978; Jones et al. 2012). The higher concentrations of boron observed in Kyger Creek SFAP groundwater compared to the lower concentration of boron observed in groundwater downgradient of the BAP are consistent with the known leaching properties of fly ash and bottom ash. Boron, therefore, is more likely to leach from the Kyger Creek SFAP/NFAP than the BAP based on the historical use of each unit. These observations support the conclusion that the Kyger Creek NFAP, and not the BAP, is the source of boron in groundwater under the BAP. Thus, the data supporting these conclusions are historically consistent with hydrogeologic conditions and findings of the BAP monitoring program.

8. CONCLUSIONS

The SSIs identified in this ASD Report are based on results from downgradient BAP monitoring well samples collected in April 2023. Review of data for quality assurance and statistical comparison was complete on 14 July 2023. In response to the SSIs, this ASD Report was prepared within the required 90-day period in accordance with 40 CFR § 257.94(e)(2).

All SSIs in the downgradient BAP monitoring wells have been determined to result from alternate sources: discharge of regional brine present in bedrock and the Kyger Creek Power Plant NFAP. Table 8-1 summarizes the six lines of evidence for each of the SSIs.

In conclusion, the BAP is not the source of the SSIs associated with the first semiannual sampling event groundwater results for 2023. Thus, Gavin will continue detection monitoring at the BAP in accordance with 40 CFR § 257.94(e)(2).

Table 8-1: BAP ASD Summary

Analyte	SSI Location	Six Lines of Evidence from USEPA Guidance					
		Alternate Source	Hydraulic Connection	Constituent Present at Source or along Flow Path	Constituent Distribution More Strongly Linked to Alternate Source	Constituent Could Not Have Resulted from the BAP	Data Are Historically Consistent with Hydrogeologic Conditions
Boron	BAC-02 BAC-03 BAC-04 BAC-05	Kyger Creek NFAP	X	X	X	X	X
Calcium	BAC-02	Regional Brine	X	X	X	X	X
Chloride	BAC-02 BAC-03 BAC-04 BAC-05	Regional Brine	X	X	X	X	X
pH	BAC-02 BAC-03 BAC-04 BAC-05	Kyger Creek NFAP	X	X	X	X	X
Sulfate	BAC-02 BAC-03 BAC-04 BAC-05	Kyger Creek NFAP	X	X	X	X	X
TDS	BAC-02 BAC-05	Regional Brine	X	X	X	X	X

 - 4) Manual measurements used to calculate groundwater elevations and to assess data quality.
 - 5) Precipitation data obtained from NOAA station for Gallipolis, OH US00333029

Appendix A1: Bottom Ash Pond Transducer Time-Series, North Couplet

Gavin Power, LLC.
Cheshire, Ohio

Date: 2022-09-23

Gradient: 0.0014 , Theta: 23.8, R²: 0.781

9/18/22-9/24/22: Active Pumping Conditions North of the BAP

During pumping, the predominant groundwater flow direction beneath the BAP is toward the north-northeast toward BAC-02/BAC-10, which lie between the BAP and the pumping wells FW-15 and FW-1101 at the Gavin Plant.

Date: 2022-09-25

Gradient: 0.00096 , Theta: 41.4, R²: 0.906

9/25/22: Initial Recovery Following Pumps Being Turned Off

Once the pumps are turned off, the predominant direction of groundwater flow beneath the BAP shifts slightly more toward the northeast, with less of a northern component.

Date: 2022-09-28

Gradient: 0.00065 , Theta: 64.6, R²: 0.988

9/26/22-9/28/22: Recovering Aquifer - Pumps Off for Multiple Days

Once the pumps have been off for multiple days (3 days), the alluvial aquifer is able to recover from pumping drawdown. The predominant direction of groundwater flow beneath the BAP continues to shift eastward toward the Ohio River, reducing the northern component of flow attributable to pumping.

Legend

-  Groundwater flow vector
-  Approximate Location of Bottom Ash Pond Boundary
-  Groundwater Monitoring Locations
-  Surface Water Monitoring Locations

Notes:

- 1) Active pumps are FW-15 and FW-1101.
- 2) Groundwater elevation units are feet.
- 3) Aerial Imagery: ESRI World Imagery Reproduced under license in ArcGIS 10.8
- 4) Groundwater hydraulic gradient and flow direction calculated by fitting a plane to water level measurements from across the site using a R Studio Shiny application. Approach adapted from the EPA On-line Hydraulic Gradient Magnitude and Direction tool.

Appendix A2: Groundwater Flow Direction with Two Pumps Active

Gavin Power, LLC.
Cheshire, Ohio

Date: 2022-12-06

Gradient: 0.00041 , Theta: 55.1, R^2: 0.941

12/4/22-12/6/22: Active Recovery Following Pumps Being Turned Off
 From 12/4 through 12/6, the aquifer is in active recovery from pumping on 12/3. During recovery, groundwater flow directions shift from north to northeast as conditions return to a natural flow direction toward the Ohio River discharge point.

Date: 2022-12-07

Gradient: 0.00047 , Theta: 17.7, R^2: 0.743

12/7/22-12/8/22: Single Pump Active North of the BAP
 Even with a single pump active, groundwater flow directions are strongly affected and shift to the north. However, gradients are not as steep under the drawdown influence from one pump as compared to when both pumps are on.

Date: 2022-12-11

Gradient: 0.00047 , Theta: 70.2, R^2: 0.963

12/9/22-12/11/22: Recovering Aquifer - Pumps Off for Multiple Days
 Once the pumps have been off for multiple days, the alluvial aquifer is able to recover from pumping drawdown. The predominant direction of groundwater flow beneath the BAP continues to shift eastward toward the Ohio River, reducing the northern component of flow attributable to pumping.

Legend

-  Groundwater flow vector
-  Approximate Location of Bottom Ash Pond Boundary
-  Groundwater Monitoring Locations
-  Surface Water Monitoring Locations

Notes:

- 1) Active pumps are FW-15 and FW-1101.
- 2) Groundwater elevation units are feet.
- 3) Aerial Imagery: ESRI World Imagery Reproduced under license in ArcGIS 10.8
- 4) Groundwater hydraulic gradient and flow direction calculated by fitting a plane to water level measurements from across the site using a R Studio Shiny application. Approach adapted from the EPA On-line Hydraulic Gradient Magnitude and Direction tool.

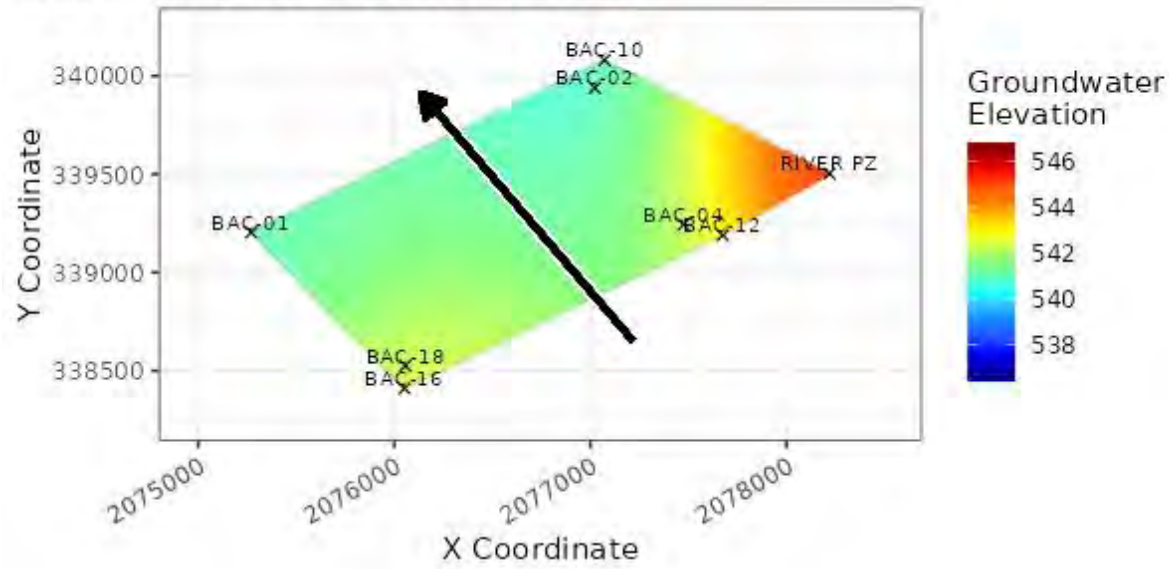

Appendix A3: Groundwater Flow Direction with Single Pump Active

Gavin Power, LLC.
 Cheshire, Ohio

Date: 2023-01-04

Gradient: 0.0023 , Theta: 319, R²: 0.616

1/3/23-1/4/23: Rapidly Rising River Stage Response

Rapidly rising river stage conditions occurred between 1/3 and 1/4. These conditions caused gradient directions to shift away from the river to the northwest for a short period until the River receded to normal conditions.

Date: 2023-01-12

Gradient: 0.00067 , Theta: 89.9, R²: 0.719

1/5/23-1/12/23: Rapidly Falling River Stage Response

Under rapidly falling river stage conditions, groundwater flow directions shift strongly to the east toward the Ohio River. Minimal pumping took place during this period. The timeframe for the flow direction to transition back to a predominantly easterly direction is influenced by the time since pumping cessation and also the river stage.

Legend

- 4) Groundwater hydraulic gradient and flow direction calculated by fitting a plane to water level measurements from across the site using a R Studio Shiny application. Approach adapted from the EPA On-line Hydraulic Gradient Magnitude and Direction tool.

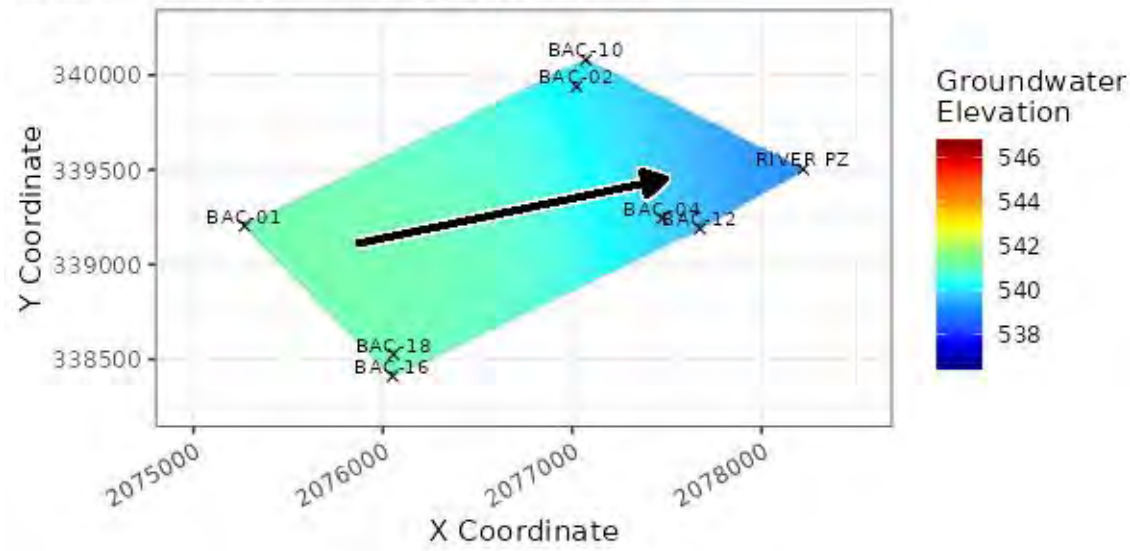

Appendix A4: Groundwater Flow Direction with Rapid River Stage Changes and Minimal Pumping.

Gavin Power, LLC.
Cheshire, Ohio

Date: 2023-03-20

Gradient: 0.00073 , Theta: 78.2, R²: 0.92

3/19/23-3/21/23: 1.5 days No Pumping

From approximately 3/19 22:00 through 3/21 8:15 there is no pumping and groundwater levels are declining. Average groundwater flow is predominantly to the east towards the Ohio River.

Date: 2023-03-22

Gradient: 0.00092 , Theta: 47.3, R²: 0.963

3/21/23-3/22/23: 18 hours Pumping

From approximately 3/21 8:15 through 3/22 14:00 there is pumping from one or both pumps. Average groundwater flow shifts to a more northeasterly direction towards the pumping wells.

Date: 2023-03-23

Gradient: 0.0009 , Theta: 56.3, R²: 0.966

3/22/23-3/23/23: 1 day No Pumping

From approximately 3/22 14:00 through 3/23 14:00 there is no pumping and water levels are relatively stable. The gauging event was completed from approximately 3/23 13:00-14:00. Flow vector represents average gradient for the entire day which is an average of the non-pumping gradient (through 3/23 14:00) and the pumping gradient (from 3/23 14:00 to the end of the day)

Delivered Electronically

Mr. Marco Deshaies
Division of Surface Water
Ohio Environmental Protection Agency
Southeast District Office
2195 Front Street
Logan, Ohio 43138

Dear Mr. Deshaies:

**Re: Ohio Valley Electric Corporation
Kyger Creek Station- Closed North Fly Ash Pond
Groundwater Semiannual Data Analysis**

Attached are field data (Attachment I) and laboratory analytical data (Attachment II) for the forty seventh set of semiannual samples collected in October, 2022, from groundwater monitoring wells KC-9501, KC-9502, KC-9504, KC-9507, KC-9508 and KC-9509 at the Ohio Valley Electric Corporation's (OVEC's) Kyger Creek Station.

In accordance with the groundwater sampling and analysis plan dated July 5, 1996, for the North Fly Ash Pond Closure Project (hereinafter referred to as "the Plan") and the statistical method notification letter dated October 20, 1999, the analytical results of the semiannual samples were statistically compared to the background data for the four Groundwater Contamination Indicator Parameters (alkalinity, specific conductivity, sulfate, and total dissolved solids) to determine if any significant change in groundwater quality has occurred. The statistical evaluation was performed by using the tolerance interval method for intrawell comparison in accordance with the Plan and notification letter.

An upper tolerance limit was calculated for each of the four parameters at each well using the background data set with a coverage of 95% (i.e., contains 95% of all possible sample measurements) and a tolerance coefficient of 95% (i.e., 95% degree of confidence with which the interval reaches the specified coverage).

The upper tolerance limits were constructed in accordance with "Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities, Interim Final Guidance" (U.S. EPA, 1989), using a one-sided tolerance factor of $K=3.188$ for $n=8$ found in Table 5 of Appendix B.

A summary of the sampling results as well as the calculated upper tolerance limits can be seen for each well on the spreadsheets included under Attachment III.

In accordance with the Plan, verbal communication of parameters exceeding upper tolerance limits was provided to you via voicemail on December 8, 2022, detailing that the concentrations for the parameter alkalinity exceeded the upper tolerance limit at wells KC-9501, KC-9502 and KC-9507; the concentrations for the parameter sulfate exceeded the upper tolerance limit at wells KC-9501, KC-9502, KC-9507, KC-9508, and KC-9509; the concentration for the parameter conductivity exceeded the upper tolerance limit at well KC-9502; and the concentrations for the parameter total dissolved solids exceeded the upper tolerance limit at wells KC-9501, KC-9502, and KC-9507.

If you have any questions, please contact me at (740) 289-7259.

Sincerely,

A handwritten signature in black ink, appearing to read "Jeremy Galloway". The signature is written in a cursive, flowing style.

Jeremy Galloway

Report Verification

This report and the above data have been confirmed by the following analyst.

Michael Ohlinger, Chemist

Email: msohlinger@aep.com

Phone: 614-836-4184

Audinet: 8-210-4184

THIS TEST REPORT RELATES ONLY TO THE ITEMS TESTED AND SHALL NOT BE REPRODUCED EXCEPT IN FULL WITHOUT WRITTEN APPROVAL OF THE LABORATORY. ALL TEST RESULTS MEET ALL OF THE REQUIREMENTS OF THE ACCREDITING AUTHORITY, UNLESS OTHERWISE NOTED.

Data Qualifier Legend

- M1 - The associated matrix spike (MS) or matrix spike duplicate (MSD) recovery was outside acceptance limits.
- P3 - The precision on the matrix spike duplicate (MSD) was above acceptance limits.
- U1 - Not detected at or above method detection limit (MDL).
- J1 - Concentration estimated. Analyte was detected between the method detection limit and the reporting limit.

Subject: Ohio Valley Electric Corporation - Ground Water Quality Results for May 1998
(DDAGW #: 07/22/98-04-3-05-0 3757)

Date: August 28, 1998

Introduction

The Ohio Valley Electric Corporation (OVEC) site is located in Gallia County, Ohio on State Route 7 approximately five miles north of Gallipolis, Ohio. There are two fly ash ponds at the OVEC site: the north and the south ponds. The PTI for closure plan is only for the closure of the north pond, while the south pond will continue to be used for fly ash disposal. The PTI was approved without OVEC having to address DDAGW's comments on the proposed ground water monitoring plan. The geology of interest beneath the OVEC site consists of unconsolidated sand and gravel formations of the Ohio River Valley Aquifer. There are two industrial, nonpotable well fields up river and down river of the north and south ponds. The industrial well fields and the Ohio River are the major influence of the ground water flow patterns at the OVEC site.

There are ten ground water monitoring wells at the closure site (KC-9501 through KC-9510) However, only wells KC-9501, KC-9502, KC-9504, KC-9507, KC-9508 and KC-9509 have been selected by OVEC for ground water monitoring purposes. Dedicated bladder pumps have been installed in these six wells for sampling purposes. The ground water monitoring package submitted on July 10, 1998 included ground water data for these six wells. The package also included water level data for fourteen wells present at the site. The six wells are proposed to be sampled quarterly for two years. No up gradient well was sampled, which is necessary to determine if an intrawell statistical approach is appropriate. DDAGW has commented on this before, but OVEC maintains that they will implement the ground water monitoring program in the approved PTI, which does not include a background well being monitored.

In a previous IOC to DSW, DDAGW outlined that based upon a comparison of shallow wells verses deep wells it appears that the water quality at the OVEC site is being impacted. Please refer to the January 1998 IOC for further information on the November sampling results.

The following are DDAGW's comments on the ground water monitoring data results in the July 1998 submittal for the OVEC site.

Observations

1. Since no background well was sampled, DDAGW has made several comparisons with the ground water quality results to evaluate whether the north fly ash pond has impacted ground water. These comparisons include shallow wells to deep wells, the wells on site to two ambient stations within the Ohio River Valley Aquifer, and the two well clusters monitoring the north fly ash pond to the cluster on the southern side of the south fly ash pond. The following are several observations about the water quality.
 - a. The shallow wells tend to have lower pH and alkalinity than the deeper wells at two of the three locations. The shallow wells KC-9502 and KC-9507 show pH ranging between 5.61 to 5.75, while the deeper well at the respective clusters, KC-9501 and KC-9504, showed pH near 7.0. Alkalinity in the deeper well 9501 was 181 ug/l, while the shallower well 9502 was at 19 ug/l.
 - b. Shallow wells 9502 and 9507 have higher concentrations of manganese, and iron versus the deep wells 9501 and 9504. Well 9501 has a manganese concentration of 0.64 mg/l while the shallow well at the same cluster has a manganese concentration of 12.6 mg/l. Iron is 1.03 mg/l in the deep well (9504) but is 16.8 mg/l in shallow well (9507).
 - c. In addition to the iron and manganese, 9507 (shallow well) has slightly higher concentrations of magnesium (Mg), TDS and sulfate (SO₄) when compared to the deep well, 9504.
 - d. The water quality for the cluster 9508 and 9509 was very similar for all parameters.
 - e. There has been fairly good consistency in water quality between the three ground water sampling events that have been performed to date, with the following exceptions: well 9502 is showing an increasing trend of iron (3.79 in 10/97 to 6.67 in 5/98); conductivity in well 9507 dropped from 850 in 10/97 and 868 in 1/98 down to 499 in 5/98; 9508 is showing a slight increase in iron between the three events while manganese is slightly decreasing.
 - f. Shallow wells 9502 and 9507 are close to being directly down gradient of the north fly ash pond while 9508 is located side gradient, or southward, of the south fly ash pond. Since there is no real difference between the deep and shallow wells at the 9508/09 location it stands to reason that the differences in water quality between shallow and deep at the other two locations may be related to a release from the north fly ash pond. Alkalinity, barium, calcium and pH are higher in the shallow well 9508 than found in 9502 and 9507. Iron and manganese are much

higher in 9502 and 9507 verses 9508. TDS, sulfate, and magnesium are higher in 9507 than found at 9508.

- g. DDAGW maintains two ground water ambient stations within the Ohio River Valley Aquifer near the OVEC site. The Middleport Well #4 and the Gallia Rural Water #4 stations are located near the OVEC site. Water quality from July 1998 at these two ambient locations was compared to the water quality being found at the OVEC site. Magnesium, barium, sodium, calcium and chloride are all similar in concentration in the ambient wells as found at the OVEC site. However, iron and manganese levels are much higher (1 to 2 orders of magnitude higher) in all of the wells (shallow and deep) at the OVEC site when compared to the ambient water quality. Interestingly, the OVEC deep wells show very similar alkalinity to the ambient wells.

Comments

1. No water level map was submitted with the three water quality reports. A potentiometric map should be submitted with the water quality data report.
2. In the June 25, 1997 memo on the ground water quality SAP, DDAGW recommended the inclusion of the background well KC-9506 in the initial two year sampling. As noted, this is particularly important in determining if an intrawell statistical approach is the best method for evaluating whether a release has occurred. Given the water quality from the first three quarters of monitoring, it appears that there are differences in water quality between the shallow and deep wells in two of the three clusters. Other differences in water quality were also evaluated above. These differences in water quality may be reflective of a release to ground water from the north pond. If a release has occurred at the OVEC site, then intrawell statistics cannot be used to evaluate a release. In order for OVEC to effectively demonstrate that no release has occurred and that intrawell comparison is appropriate, DDAGW continues to recommend that KC-9506 be included in the sampling effort.
3. Based on the water quality data and the submitted water level depth data, DDAGW continues to recommend that another monitoring well cluster be installed between the clusters 9501/9502 and 9504/9507 on the east side of the north fly ash pond. OVEC declined to install this well cluster in 1997 given that OEPA approved the PTI without this well as a component of the proposed ground water monitoring program. If OVEC will not install this monitoring well as part of detection monitoring program, then the cluster would likely be installed during assessment activities. Based on the review of the water quality data it is likely that assessment activities will be necessary.

Conclusion

DDAGW has completed its review of the July 1998 Ground Water Quality Report for the North Pond closure at the OVEC site in Gallia County. DDAGW made several observations

concerning the water quality data generated to date. Based on the water quality data it appears that there is a difference in water quality between the shallow and deep portions of the Ohio River Valley Aquifer on the down gradient side of the site. This may be an indication of a release from the north or south ponds. Should you have any further questions regarding this review or the site in general, please contact me.

Interoffice Memo

To: Marco Deshaies DSW, SEDO.
From: Steve Lowry through Steve Williams DDAGW, SEDO.
Date: February 7, 2017
RE: Ohio Valley Electric Corporation (OVEC), Kyger Creek Station, North Fly Ash Pond Closure Project, Internal Technical Review, Ground Water Program, Gallia County, OIB00005*PD
Subject: Review of the December 2015, May 2016 and December 2016 North Fly Ash Pond Closure Project Semi-annual groundwater sampling results.

INTRODUCTION

The DDAGW has reviewed the December 14, 2015, May 25, 2016 and the December 2, 2016 dated submittals containing the semiannual groundwater sampling and statistical analysis results from the North Fly Ash Pond Closure Project. These reports include data from the corresponding October 2015, April 2016 and October 2016 sampling events.

Groundwater monitoring of the North Fly Ash Pond is required as part of a January 15, 1997 PTI. Groundwater monitoring at the site began in October of 1997. The North Pond is closed and located immediately north of the adjacent and open South Fly Ash Pond. The North Fly Ash Pond was first used in the 1950's.

The statistical evaluations of groundwater quality contained in the above noted submittals indicate that the upper tolerance limits for the following parameters were exceeded at the following wells:

Alkalinity at wells KC-9501 and KC-9502, exceeded during all three sampling events.

Sulfate at wells KC-9508 and KC-9509, exceeded during all three sampling events, and at well KC-9502 during both 2016 events and KC-9504 during the October 2015 event.

TDS at wells KC-9508 and KC-9509, exceeded during all three sampling events.

Conductivity at well KC-9508 exceeded during the October 2016 sampling event.

Statistical exceedances have been declared by the facility for at least one parameter per sampling event since the beginning of the statistical evaluations, in October of 1999. As with past submittals, OVEC contends that "these statistical exceedances are due to natural variation and not associated with the North Fly Ash Closure Project".

The PTI does not include any provisions for further investigations related to the statistical increases, or for an assessment of the groundwater quality.

BACKGROUND

The facility has been conducting semi-annual groundwater monitoring at the North Fly Ash Pond since 1997. The PTI "Groundwater Sampling and Analysis Plan" is a rather brief document. The plan outlines sampling protocols and parameters and requires a statistical analysis of the four indicator parameters and a requirement to notify Ohio EPA of any statistically significant increases within 15 days of receipt of the analysis. As noted above, the plan does not contain any requirements for additional investigations or for the implementation of a groundwater assessment.

Per the PTI, during the spring sampling event, the statistical parameters of Alkalinity, Specific Conductance, Sulfate and TDS are collected and analyzed. During each fall sampling event, the above four parameters and an additional 12 water quality parameters are collected. The above three noted submittals contain the field parameters for the six sampled wells, total water depth measurements, river stage measurements, the laboratory data sheets for the sampled parameters, and a table that shows the sampling results for each parameter and the intra-well 95% confidence interval value for each of the statistical parameters.

Groundwater flow maps were not included in the submitted documents. The groundwater flow direction at the site is difficult to accurately determine due to the limited number of water level measurements included in the submittals. The lack of a submitted water level from an upgradient well also hinders evaluation of groundwater flow directions. Additionally, clarification may be necessary as water level data appears to be reported as a depth to water, from the top of the monitoring well inner casing, as opposed to mean sea level.

The North Fly Ash Pond is monitored by six wells which represent three well clusters, each monitoring two separate units. These wells are screened in sand and gravel deposits associated with the Ohio River. The wells range in depth from approximately 34 feet to 94 feet below grade. The well screens of each well cluster are separated by a distance of approximately two to five feet. The well clusters (shallow listed first) are grouped as follows: KC-9502/KC-9501, KC-9507/KC-9504, and KC-9509/KC-9508. Groundwater monitoring was not initiated at the North Fly Ash Pond until approximately 40 years after waste placement was initiated.

Wells KC-9509/KC-9508 are located primarily downgradient of the South Fly Ash Pond. These wells show the most significant impact to groundwater. The shallow well KC-9509 is showing statistically significant increases in conductivity, TDS and sulfate. Conductivity has increased from 485 umohs/cm in 1997 to 1,126 umoh/cm in 2016. TDS has increased from 603 mg/l to 779 mg/l and sulfate has increased from 241 mg/l to 460 mg/l over the same time period. The deeper well KC-9508 is showing

statistically significant increases in TDS and sulfate along with a visually increasing trend in conductivity since 2010. TDS in well KC-9508 has increased from 558 mg/l in 1997 to 866 mg/l in 2016, sulfate has increased from 190 mg/l in 2010 to 420 mg/l in 2016 and conductivity has increased from 512 umohs/cm in 1997 to 1,296 umoh/cm over the same time period.

Wells KC-9501/9502, located at the northernmost portion of the North Fly Ash Pond, has shown a statistically significant increase in alkalinity in both wells. Alkalinity in well KC-9501 has increased from 169 mg/l to 260 mg/l, and well KC-9502 from 19 mg/l to 45.7 mg/l over the 1997 to 2016 time period.

Wells KC 9507/9504 located downgradient of the North Fly Ash Pond reveals mostly decreasing trends in all statistically evaluated parameters, with the exception of deep well KC-9504, which has a statistically increasing trend for sulfate. The sulfate concentration in well KC-9504 started out at a concentration of 327 mg/l in 1997 and is currently at 423 mg/l. The sulfate concentration in this well was as high as 820 mg/l in 2008. The trend for sulfate in this well has been decreasing since 2008. TDS in this well is currently at a concentration of 757 mg/l with a past high of 1480 mg/l in 2008.

For comparison purposes, un-impacted groundwater from Ohio River sand and gravel deposits, from the Proctorville Wellfield (Lawrence County), reveal the following average concentrations: Alkalinity 58.2 mg/l, Conductivity 320.1 umhos/cm, TDS 195.7 mg/l and Sulfate 46.1 mg/l.

The sampling of additional existing groundwater monitoring wells, such as background well KC-9506 and possibly the KC-9505/9503 cluster may provide additional information regarding groundwater quality, flow directions and the extent of impacted ground water in the area of the North Fly Ash Pond. The installation of additional appropriately placed downgradient wells would also allow for a more meaningful evaluation of groundwater quality and flow directions in the area of the North Fly Ash Pond.

As shown in the December 14, 2015, the May 25, 2016 and the December 2, 2016 dated submittals titled "North Fly Ash Pond Closure Project, Groundwater Semiannual Data Analysis" the drinking water health standard was exceeded in all six monitoring wells for the parameter manganese. DDAGW will conduct a detailed review of potential receptors in the area. However, a preliminary review shows no private wells or public well fields immediately down gradient of the Kyger Creek Station, North Fly Ash Pond Closure Project.

RECOMMENDATIONS

1. The DDAGW has reviewed the December 14, 2015, the May 25, 2016 and the December 2, 2016 dated submittals titled "North Fly Ash Pond Closure Project,

Groundwater Semiannual Data Analysis". In these documents OVEC has presented the results of a statistical analysis of groundwater and concluded that the nine statistical exceedances are due to "natural variation and not associated with the North Fly Ash Pond Closure Project". The DDAGW does not concur with OVEC's statement that "these statistical exceedances are due to natural variation and are not associated with the North Fly Ash Closure Project". OVEC has not undertaken any known field activities to demonstrate that the statistically elevated concentrations of sulfate, TDS, Conductivity or Alkalinity are not the result of the operation of the North Fly Ash Pond. The DDAGW recommends that an assessment of groundwater quality be conducted at the North Fly Ash Pond.

To better evaluate the declared statistical exceedances, the DDAGW recommends that OVEC make improvements to the groundwater monitoring system for the North Fly Ash Pond and then conduct an assessment of groundwater quality as outlined in Attachment "G" of Guidance Document GD0303.010 titled "Ground Water Monitoring Program Plan Requirements for Wastewater Facilities".

2. The DDAGW recommends the following improvements be made to the groundwater monitoring network at the North Fly Ash Pond:
 - a. That water level measurements and groundwater sampling results from background well KC-9506 be included in all future submittals. This sampling data point would represent background water quality for the North Fly Ash Pond and allow for a more meaningful evaluation of groundwater quality.
 - b. That water level measurements from well KC-9510, KC-9503 and KC-9505 also be included in all future submittals.
 - c. That OVEC evaluate the usefulness of including wells KC9503 and KC-9505 into the groundwater monitoring network.
 - d. That the 10 groundwater monitoring wells installed in the area of the North Fly Ash Pond (KC-9501 to KC-9510) be resurveyed to ensure that the collected water level measurements accurately reflect site conditions.
 - e. That future submittals include ground water flow maps derived from the above noted monitoring wells and that the water level measurements are recorded in reference to mean sea level.
 - f. That upon determining current groundwater flow directions in the area of the North Fly Ash Pond, OVEC evaluate the adequacy of the current groundwater monitoring network. At this time the installation of an additional shallow groundwater monitoring well between existing wells KC9502 and KC-9507 appears to be appropriate.

Conclusion

The DDAGW has reviewed the December 14, 2015, May 25, 2016 and the December 2, 2016 dated submittals titled North Fly Ash Pond Closure Project submittals. The DDAGW has recommended that OVEC make improvements to the groundwater monitoring network at the North Fly Ash Pond and that an assessment of groundwater quality be conducted.

1. INTRODUCTION

1.1 REGULATORY AND LEGAL FRAMEWORK

In accordance with Title 40 Code of Federal Regulations (CFR), Part 257, Subpart D – Standards for the Disposal of Coal Combustion Residuals (CCR) in Landfills and Surface Impoundments (CCR Rule) – Gavin Power, LLC (Gavin) has been implementing the groundwater monitoring requirements of 40 CFR § 257.90 et seq. for the Bottom Ash Pond (BAP) CCR Surface Impoundment at the General James M. Gavin Power Plant (Plant). Gavin calculated background levels and conducted statistical analyses for Appendix III constituents in accordance with 40 CFR § 257.93(h). Currently, Gavin is performing detection monitoring at the BAP in accordance with 40 CFR § 257.94. Statistically significant increases (SSIs) over background concentrations were detected in downgradient monitoring wells for Appendix III constituents for the second semiannual (H2) groundwater sampling event of 2023 and are explained in this Alternate Source Demonstration (ASD) Report. The second semiannual groundwater sampling event of 2023 was performed from September 27, 2023 to October 3, 2023. Review of data for quality assurance and statistical comparison was completed on December 5, 2023. Consistent with the 90-day requirement of 40 CFR § 257.94(e)(1) this ASD Report is included with the annual groundwater monitoring and corrective action report required under CFR § 257.90(e), which is due January 31, 2024.

An SSI for one or more Appendix III constituents is a *potential* indication of a release of constituents from a CCR unit to groundwater. In the event of an SSI, the CCR Rule provides that "... the owner or operator may demonstrate that a source other than the CCR unit caused the SSI over background levels for a constituent or that the SSI resulted from error in sampling, analysis, statistical evaluation, or natural variation in groundwater quality..." (40 CFR § 257.94(e)(2)). If it is demonstrated that the SSI is the result of a source other than the CCR unit, then the CCR unit may remain in the Detection Monitoring Program instead of transitioning to an Assessment Monitoring Program. To implement this demonstration, an ASD must be made in writing and the accuracy of the information must be verified through certification by a qualified Professional Engineer (40 CFR § 257.94(e)(2)).

The United States Environmental Protection Agency (USEPA) guidance document, "Solid Waste Disposal Facility Criteria Technical Manual, EPA530-R-93-017, Subpart E" (USEPA 1993), specifies the following six lines of evidence that must be addressed to determine whether an SSI resulted from a source other than the regulated disposal unit.

- An alternative source exists;
- A hydraulic connection exists between the alternative source and the well with a statistically significant increase;
- Constituent(s) (or precursor constituents) are present at the alternative source or along the flow path from the alternative source prior to possible release from the unit;

- The relative concentration and distribution of constituents in the zone of contamination are more strongly linked to the alternative source than to the unit when the fate and transport characteristics of the constituents are considered;
- The concentration observed in groundwater could not have resulted from the unit given the waste constituents and concentrations in the unit leachate and wastes, and the site hydrogeologic conditions; and
- The data supporting conclusions regarding the alternative source are historically consistent with the hydrogeologic conditions and findings of the monitoring program.

This ASD Report addresses each of these lines of evidence for the SSIs detected in groundwater collected from downgradient compliance wells at the BAP. The groundwater monitoring program and ASD have been prepared utilizing accepted practices incorporating both site specific and regional information. In 2022, the USEPA provided feedback on the groundwater monitoring program at the BAP (USEPA 2022) and Gavin formally responded to the concerns (Gavin 2022). In consideration of this feedback, Gavin installed additional monitoring wells and conducted supplemental characterization at the BAP to refine the conceptual site model (CSM). Findings and updates were originally provided in the 2022 Annual Groundwater Monitoring and Corrective Action Report (ERM 2023a), and are also discussed below.

Some of the matters addressed herein are also addressed in USEPA's November 22, 2022 Final Decision: Denial of Alternative Closure Deadline for General James M. Gavin Plant, Cheshire, Ohio (Final Decision). In response to the Final Decision, Gavin has explained how the approaches described and documented in this report are consistent with USEPA regulations and guidance as well as with best engineering practices and judgment. Gavin has contested USEPA's findings in the Final Decision from a factual, technical and legal perspective. We note that USEPA's findings and determinations in the Final Decision are the subject of pending litigation.

1.2 BACKGROUND

The Plant is a coal-fired generating station located in Gallia County in Cheshire, Ohio (Figure 1-1), and is bounded to the east by the Ohio River. The BAP is one of three CCR units at the Plant that are subject to regulation under the CCR Rule and is located adjacent to and immediately south of the main Plant area (Figure 1-2). Adjacent to the BAP is the smaller Reclaim Pond (Figure 1-3) which, along with the BAP, make up the Bottom Ash Complex (BAC) that has operated since 1974. The Reclaim Pond was not designed to retain an accumulation of CCR; did not and does not receive any significant amount of CCR; and did not and does not treat, store, or dispose of CCR. Therefore, it is not subject to the CCR Rule.

The certified groundwater monitoring well network (ERM 2021a) consists of three upgradient monitoring wells (BAC-01, MW-1, and MW-6) along the western perimeter of the BAP, two upgradient monitoring wells (BAC-06 and BAC-07) along the southern perimeter, and four downgradient monitoring wells (BAC-02, BAC-03, BAC-04, and BAC-05) positioned along the northern and eastern perimeter of the BAP (Figure 1-3). These wells are herein referred to as "network" wells for the purposes of this report.

Consistent with the CCR Rule and the Groundwater Monitoring Plan developed for Gavin (ERM 2017), an interwell prediction limit approach was used to identify potential impacts to groundwater. Upper prediction limits, and a lower prediction limit specifically for pH, were established based on the upgradient groundwater data. The 2017 Annual Groundwater Monitoring and Corrective Action Report was prepared to document the status of the groundwater monitoring program for the BAP (ERM 2018a) and included results from eight sampling events performed from August 2016 to July 2017. The 2017 report and each subsequent Annual Groundwater Monitoring and Corrective Action Report have included comparisons of the sampling results obtained from downgradient wells during each semiannual detection monitoring event with the upper and lower prediction limits calculated based on the initial eight background samples taken from upgradient wells. ASD reports (ERM 2018b; ERM 2019; ERM 2020; ERM 2021b; ERM 2022; ERM 2023) were prepared to address SSIs that were identified during the initial and subsequent reporting periods.

Sixteen additional monitoring wells were installed in key areas around the BAP in 2022 (Figure 1-3). These wells have not yet been added to the certified network; however, background sampling has been completed since October 2022.

1.3 GEOLOGY

Observation of bedrock cores collected around the BAP in 2022 (ERM 2023) indicates the uppermost bedrock layers are claystone/siltstone (interpreted to be the Round Knob) and an underlying sandstone stratum (interpreted to be the Cow Run). A sharp contact exists between the bedrock units and the overlying coarser-grained glacial sands and gravels. These coarser sediments, consisting primarily of medium to coarse sands and gravel, are buried by the younger, finer-grained unit, which exists as a laterally extensive layer of clays and silts. This younger, finer-grained unit (referred to as the separation layer), exists between the base of the BAP and the coarser sediments below (the uppermost aquifer). Some fine-grained sands are also observed within the separation layer, though they are primarily intermixed within the clay and silt matrix and generally found at depth, closer to the alluvial aquifer.

1.4 SITE HYDROLOGY AND HYDROGEOLOGY

The uppermost aquifer beneath the BAP area is approximately 20 to 40 feet thick and consists primarily of the coarser-grained sands and gravels described in section 1.3, though some fine sand is also present. Also referred to as the alluvial aquifer, the uppermost aquifer is confined by the clay and silt separation layer above and by the siltstone/claystone bedrock unit below (Figure 1-4). The Ohio River acts as a hydraulic boundary condition to the east that is dynamic in nature due to fluctuations in river stage. Two water supply wells operated by the Plant (FW-15 and FW-1101) exist approximately 400 to 700 feet north of the BAP (Figure 1-3). These wells have 20-to-30-foot screens established within the alluvial aquifer and have a significant combined influence on groundwater flow at the BAP, which is discussed further in Sections 3 through 5. The use of the wells is variable in both duration and frequency and is dependent on Plant needs; however, when in use, the pumping rates are consistent at 550 and 650 gallons per minute for FW-1101 and FW-15, respectively. Two additional water supply wells (FW-17 and FW-1102) exist approximately 0.4

to 0.5 miles further north and are not expected to have a significant influence on groundwater at the BAP due to their distance from the BAP and infrequency of their use. A wetland area exists to the west of the BAP, which contains naturally occurring ponds and wetland vegetation.

Five undisturbed Shelby tube samples of the clay and silt separation layer (mentioned above, located between the uppermost aquifer and the bedrock unit below) were collected from a barge within the BAP in 2020 for laboratory grain size distribution and permeameter testing (ERM 2021c). The samples ranged from 0.9% to 32.3% sand and 67.7% to 99.1% silt and clay. The permeameter testing of these samples yielded hydraulic conductivity values (K values) ranging from 1.44×10^{-8} cm/sec to 1.18×10^{-7} cm/sec. Thus, even the samples with a higher amount of sand yielded very low K values. These data are direct evidence that the separation layer beneath the BAP acts as an aquitard to downward migration of water stored in the BAP.

1.5 2023 H2 GROUNDWATER SAMPLING EVENT

The data from the second semiannual groundwater sampling event from 2023 were compared to the upper and lower prediction limits for the respective parameters, and SSIs for Appendix III analytes were identified. Table 1-1 summarizes occurrences of SSIs from the September and October 2023 sampling event.

TABLE 1-1: SSIS IN GROUNDWATER BENEATH THE BAP

Analyte	Monitoring Well			
	BAC-02	BAC-03	BAC-04	BAC-05
Boron	X	X	X	X
Calcium	X	φ	φ	φ
Chloride	X	X	X	X
Fluoride	X	φ	φ	φ
pH	φ	X	X	X
Sulfate	X	X	X	X
Total Dissolved Solids	X	φ	φ	X

Notes: φ = No SSI; X = SSI; BAP = Bottom Ash Pond; SSI = statistically significant increase.

This ASD Report identifies the regional discharge of bedrock groundwater as the source of calcium, chloride, fluoride, and total dissolved solids (TDS), and the Kyger Creek NFAP is identified as the source of boron, sulfate, and low pH. Supporting information and additional discussion of each of the lines of evidence are presented in subsequent sections of this ASD Report.

2. DESCRIPTION OF ALTERNATE SOURCES

Identified alternate sources for the Appendix III constituents that are observed at the BAP include:

- Regional Brine – Naturally occurring brine originating from bedrock (i.e., Cow Run Sandstone) as observed in shallow groundwater in and around Gavin. Identified as the alternate source of calcium, chloride, fluoride, and TDS.
- Kyger Creek Generating Station Closed North Fly Ash Pond – CCR-impacted groundwater migrating from the Closed North Fly Ash Pond. Identified as the alternate source for boron, low pH, and sulfate.

Additional influence on groundwater quality at the BAP is observed from mixing of the alternate sources and upgradient alluvial aquifer groundwater from west of the BAP and/or surface water from the Ohio River.

A summary of each of these alternate sources and influences on groundwater quality is provided below.

2.1 REGIONAL BRINE

Naturally occurring brine, which is known in the Ohio River Valley to have elevated levels of chloride, fluoride, and other trace elements, exists in the subsurface (Stout et al. 1932; ORSANCO 1984; ODNR 1995). The discharge of brines is seen at a regional scale, with shallow wells near the Ohio River observing brine impacts as a result of the vertical head gradient driving overall flow upwards from bedrock to alluvium (USGS 1997). The Cow Run Sandstone is the shallowest sandstone of any importance in Ohio where brine of marine origin has been observed (Phalen 1919; Stout et al. 1932). Brine was discovered at the land surface approximately 10 miles southwest of the Plant in Gallipolis, Ohio and was utilized for the commercial production of salt beginning in 1807 (Stout et al. 1932). Naturally occurring brine was also identified at the land surface in Jackson, Ohio approximately 30 miles west of the Plant (ODNR 1995). The regional presence of shallow brine indicates the potential for naturally occurring brine to contribute Appendix III constituents to groundwater at the Plant. Evidence of brine impacts near the Plant includes specific conductivity measurements at several monitoring wells upgradient of the Fly Ash Reservoir that are consistently greater than 10,000 $\mu\text{S}/\text{cm}$ and reach as high as 39,000 $\mu\text{S}/\text{cm}$. A brine signature was also observed in supplemental BAP monitoring well BAC-11 during sampling in September 2023. This signature included a specific conductivity field measurement of 39,301 $\mu\text{S}/\text{cm}$, TDS of 38,000 mg/L, and chloride levels of 33,000 mg/L. For reference, the approximate specific conductivity of seawater is 50,000 $\mu\text{S}/\text{cm}$ (USGS 2019).

The background groundwater data set is discussed further in Section 4.

2.2 KYGER CREEK NORTH FLY ASH POND

The Kyger Creek Generating Station is located along the Ohio River in Gallia County, south of and adjacent to the Plant (Figure 2-1). The Kyger Creek Fly Ash Pond complex consists of the 110-acre NFAP (closed) and 60-acre South Fly Ash Pond (SFAP). The construction history and groundwater monitoring results of these ponds are summarized in the first ASD Report (ERM 2018b). According

to the approved Ohio Environmental Protection Agency (OEPA) Permit-to-Install (PTI), construction activities to close the NFAP were initiated in March 1998 and concluded in October 2000 (OVEC 2017). Semiannual groundwater sampling for PTI compliance at the NFAP has been performed since October 1997 and currently includes sampling of six monitoring wells (OEPA 1996). Per the PTI, samples are collected semiannually for:

- Groundwater Contamination Indicator Parameters – alkalinity, specific conductivity, sulfate, and total dissolved solids; and
- Groundwater Quality Parameters – barium, calcium, chloride, iron, lead, magnesium, manganese, selenium, sodium, gross alpha and gross beta, and pH.

Groundwater monitoring for federal CCR compliance is performed at the SFAP only.

The closed Kyger Creek NFAP is located less than 300 feet south of the Gavin BAP, and the units share an approximately 2,000-foot-long border (Figure 2-1). Gavin's network wells BAC-06 and BAC-07 were installed in 2020 at the top of the south berm along this boundary and screened within the alluvial aquifer. Six supplemental monitoring wells were installed along the south berm between the BAP and the Kyger Creek NFAP in 2022 to better understand the hydraulic relationship between the BAP and the NFAP and groundwater quality along the boundary. These supplemental wells include alluvial aquifer wells BAC-16 and BAC-18, separation layer wells BAC-15 and BAC-20, bedrock well BAC-19, and separation layer and alluvial aquifer well BAC-17.

The Kyger Creek NFAP has a higher potential to impact groundwater than the BAP because the Kyger Creek NFAP contains fly ash (approximately 1.7 million cubic yards), which when compared to bottom ash, has a greater potential to leach CCR constituents due to higher concentrations of CCR constituents and increased surface area due to smaller particle size (Cox et al. 1978; OEPA 1996; Jones et al. 2012), as described further in Section 7. The NFAP also contains approximately 900,000 cubic yards of boiler slag and boiler slag fines used to construct the NFAP berm and as cover material (OEPA 1996).

2.3 UPGRADIENT ALLUVIAL AQUIFER GROUNDWATER

Groundwater from upgradient of the BAP is observed at upgradient monitoring locations west of the BAP, including network wells MW-1, MW-6 and BAC-01, and supplemental wells BAC-08, BAC-21, BAC-22, and BAC-23. The upgradient status of these locations is confirmed by potentiometric surface maps which consistently show higher potentiometric elevations west of the BAP than in wells north, south, or east of the BAP. Potentiometric surface maps are presented and discussed further in Section 3. Groundwater from west of the BAP flows through the alluvial aquifer beneath the BAP where it ultimately mixes with groundwater migrating from Kyger Creek, groundwater discharging from bedrock, and surface water from the Ohio River.

2.4 OHIO RIVER

The Ohio River extends approximately 981 river miles from Pittsburgh, Pennsylvania to Cairo, Illinois and drains approximately 205,000 square miles (ORSANCO 2018). The Ohio River is located approximately 700 feet east of the BAP, and the alluvial aquifer beneath the BAP is hydraulically connected to the River.

While the Ohio River is not considered a source of impacts to groundwater under the BAP, the mixing of Ohio River surface water with groundwater does influence groundwater quality at the BAP through interaction of groundwater and river water (see Section 3). Surface water from the Ohio River enters the alluvial aquifer and interacts with groundwater beneath the BAP, driven by induced infiltration caused by pumping of the onsite water supply wells and during periods of rapidly rising and high river stage conditions (i.e., flooding). When the Ohio River floods, water from the River mixes with groundwater within the alluvial aquifer (ERM 2018b) beneath the BAP. The quality of the Ohio River water that mixes with groundwater is discussed in Section 4.

3. HYDRAULIC CONNECTIONS TO THE ALTERNATE SOURCES

Explanations of the hydraulic connections between potential alternate sources and the downgradient wells of the BAP were previously provided in the first ASD Report for the BAP (ERM 2018b). An updated summary of each of these connections is provided below.

3.1 EVALUATION OF ONSITE PUMPING

To better understand the role of pumping on the dynamic flow field beneath the BAP, transducers were deployed in several alluvial wells around the BAP, and continuous long-term, high-resolution potentiometric elevation data were collected from January through November 2023. Transducer data were evaluated to identify pumping signatures (drawdown curves) for the on-site water supply wells, and these signatures were used to approximate the frequency and duration of pumping. The pumping of the on-site water supply wells is variable in both duration and frequency and is dependent on Plant needs. Therefore, usage from month to month and year to year may be slightly different which has the potential to affect overall groundwater flow dynamics for various time periods.

An evaluation to approximate the percentage of days and hours of pumping during the 2023 monitoring periods was performed by reviewing transducer data collected from nearby monitoring well BAC-10 to identify pumping periods. Review of the 2023 data included estimation of the number of hours of pumping and interpretation of pumping at individual well FW-1101, which has a smaller pumping signature. The results of this 2023 evaluation indicate that pumping at one or both of these wells occurred on approximately 85% of days in 2023 (approximately 309 of 365 days) and approximately 44% of the total time (approximately 3,826 total hours). This total pump duration includes a one-month period (all of December 2023) when both supply wells were inactive. In comparison, pumping at FW-15 and/or FW-1101 in 2022 occurred on approximately 72% of days (79 of 109 days), and active pumping conditions occurred for approximately 47% of the time (approximately 1,236 total hours). This indicates that pumping conditions were relatively consistent in frequency and duration between the 2022 and 2023 monitoring periods.

3.2 HYDRAULIC CONNECTION TO REGIONAL BRINE

Regional groundwater within the fractured sedimentary bedrock in the Ohio River Valley generally flows from areas of higher topographic elevation towards areas of lower elevation, ultimately discharging to the Ohio River (ORSANCO 1984). Precipitation infiltrates the land surface to recharge the underlying aquifers below, and flow of groundwater within these aquifers is primarily driven by the gravitational force on groundwater (differences in hydraulic head) within the bedrock.

At the BAP, groundwater discharges upward from shallow fractured bedrock into the overlying alluvial aquifer under certain hydraulic conditions. This upward discharge of groundwater from the bedrock aquifer to the overlying alluvial aquifer is attributable to the following three primary drivers:

- Hydraulic pressure (head) in the bedrock aquifer compared to the alluvial aquifer driven by elevation and recharge at the adjacent ridges;

- Areas of high hydraulic conductivity related to the interconnected fracture network within the bedrock; and
- Active pumping conditions related to operation of the two water supply wells directly north of the BAP (FW-15 and FW-1101).

3.2.1 HYDRAULIC CONDUCTIVITY

Groundwater flow within bedrock occurs primarily via flow through the network of interconnected and saturated fractures, which provides a much higher effective porosity (fracture/secondary porosity) than does the bedrock aquifer matrix (primary porosity). This is due to the effective pore size of the fractures (the ratio of volume of open fractures to the bulk volume of the bedrock matrix) as compared to the miniscule pore sizes between sedimentary grains making up the bedrock matrix. Consequently, the fracture network provides a flow system with significantly higher hydraulic conductivity than the overall bedrock matrix porosity.

This network of fractures is highly heterogeneous, varying greatly in connectivity and conductivity from location to location. The fracture network is also anisotropic, which means the hydraulic conductivity varies in magnitude and direction at a particular location. As such, the occurrence of fracture interconnectivity and saturation varies greatly at a regional scale. In the Ohio River Valley, stress relief fracturing in bedrock provides a structural framework for bedrock overlain by coarse glacial outwash alluvial deposits to be hydraulically interconnected. The degree of stress fracturing is generally greatest in bedrock directly underlying the alluvial valley bottom, driving enhanced transmissivity of the fracture network in these areas (USGS 1981). Such is the case of the BAP area, where the Ohio River acts as a major regional groundwater discharge boundary, driving shallow brines towards the surface due to differences in hydraulic head. In addition, the depth of brine is shallower along the Ohio River than in the surrounding ridges due to flow from areas of recharge to areas of discharge (USGS 1997).

Heterogeneity and anisotropy of the fracture network is clearly observed in the bedrock wells installed around the BAP. Hydraulic conductivity was measured to be 4.17×10^{-2} cm/sec at bedrock well BAC-11 where observations of significant fractures were made during drilling and geophysical logging. This high hydraulic conductivity value (K value) in BAC-11 is similar to K values measured in the alluvial aquifer. Conversely, substantially lower K values were measured at bedrock wells BAC-09 (1.23×10^{-6} cm/sec) and BAC-19 (2.65×10^{-8} cm/sec), where fewer fractures were observed. This difference in hydraulic conductivity values between wells screened within the same bedrock unit exemplifies the effect of fracture network connectivity on hydraulic conductivity and helps to explain why some portions of the alluvial aquifer can be impacted by regional discharge (i.e., near BAC-02) while other areas may not be substantially influenced (i.e., near BAC-01 and BAC-18).

3.2.2 INFLUENCE OF PUMPING CONDITIONS

As water is removed from the alluvial aquifer via pumping, it reduces the pressure that water within the aquifer exerts on the surrounding system. As described in the 2022 H2 Alternate Source Demonstration Report (ERM 2023), upward vertical gradients between the bedrock aquifer and the alluvial aquifer were observed. For example, the July to September 2022 data showed this

relationship was more pronounced at couplet pairs BAC-02/BAC-11 and BAC-04/BAC-13 to the north and east and was less pronounced at couplet pairs BAC-01/BAC-09 and BAC-18/BAC-19 on the western and southern sides of the BAP where the effects of pumping are less noticeable (i.e., less drawdown) due to their greater distance from the water supply wells and the relatively low hydraulic conductivity of the bedrock wells. When the water supply wells are actively pumping, the pressure head in the alluvial aquifer is diminished in the vicinity of the water supply wells (Figure 3-1), allowing for a stronger upward migration of groundwater from bedrock to the alluvial aquifer.

3.3 HYDRAULIC CONNECTION TO KYGER CREEK NORTH FLY ASH POND

Groundwater flow directions around the BAP are heavily influenced by pumping of Gavin water supply wells FW-15 and FW-1101. Based on 2023 transducer data from monitoring wells around the BAP, the alluvial aquifer continued to have an immediate response to pumping, similar to observations in 2022, regardless of whether one or both wells are active.

The 2023 transducer data were evaluated to analyze the effects of pumping on horizontal hydraulic gradients and flow directions in the alluvial aquifer beneath the BAP. Horizontal gradients were calculated for each day from January 1, 2023, through November 7, 2023, using an R tool that calculates the best fit of a 2D plane to the potentiometric elevations based on the geometry of a given well-network. The approach was adapted from the EPA On-line Hydraulic Gradient Magnitude and Direction tool (USEPA 2021). The tool output is an overall flow vector frequency and direction for the transducer network. The diagrams in Figure 3-2 summarize the frequency and direction of groundwater flow. During the January 1, 2023, to June 30, 2023, time period groundwater flow was predominantly east-northeast, and during the July 1, 2023, to November 7, 2023, time period, groundwater flow was predominantly north-northeast. These findings confirm the following key points:

- Due to the prevailing northeasterly groundwater flow direction, the Kyger Creek NFAP is not situated upgradient of the monitoring wells located along the western and northwestern areas of the Gavin BAP;
- Monitoring wells on the south side of the BAP are located downgradient of the Kyger Creek NFAP and upgradient of the BAP;
- During all groundwater flow conditions (pumping and non-pumping), the Kyger Creek NFAP is hydraulically upgradient of the monitoring wells along the southern and southeastern areas of the BAP; and
- During pumping conditions, the Kyger Creek NFAP is hydraulically upgradient of the monitoring wells along the southern, eastern, and northeastern areas of the BAP.

It is evident that the Kyger Creek NFAP is hydraulically connected to the downgradient BAP monitoring wells based on the prevalent northeasterly direction of groundwater flow and the presence of the same alluvial aquifer beneath both the Kyger Creek NFAP and the BAP. Pumping activity of water supply wells FW-15 and FW-1101 creates a clear and nearly immediate influence on groundwater flow directions around the BAP, shifting groundwater flow northward, especially across the eastern half of the BAP. This shift in localized groundwater flow directions orients the

Kyger Creek NFAP as upgradient to a larger area of the BAP and results in an increased hydraulic connection between the Kyger Creek NFAP and the aquifer beneath the BAP.

4. CONSTITUENTS ARE PRESENT AT THE ALTERNATE SOURCES OR ALONG THE FLOW PATHWAYS

Groundwater quality at the BAP is influenced by multiple sources, as described in Sections 2 and 3. The Kyger Creek NFAP is identified as the source of boron, low pH, and sulfate. Regional brine is identified as the source of calcium, chloride, fluoride and TDS in BAP downgradient groundwater. The mixing of upgradient alluvial groundwater and water from the Ohio River also affects groundwater chemistry downgradient of the BAP. A summary of the constituents present at these sources is provided below.

4.1 REGIONAL BRINE

Regional brine is present in the area of the Plant and locally in bedrock under the BAP. Supplemental monitoring wells BAC-09, BAC-11, BAC-13, and BAC-19, which were installed in the Cow Run Sandstone at the BAP in 2022, all have chemical signatures indicating the presence of brine. The ranges for calcium, chloride, fluoride and TDS in bedrock groundwater and downgradient alluvial groundwater (BAC-02, BAC-03, BAC-04 and BAC-05) at the BAP is presented in Table 4-1.

TABLE 4-1: COMPARISON OF BEDROCK GROUNDWATER TO DOWNGRADIENT BAP GROUNDWATER

Analyte	Units	Bedrock Groundwater at BAP	Downgradient Alluvial Groundwater at BAP
Calcium	mg/L	91-2,600	79-140
Chloride	mg/L	920-33,000	38-63
Fluoride	mg/L	0.56-1.6	0.064-0.23
TDS	mg/L	1,500-38,000	440-800

Notes: BAP = Bottom Ash Pond; mg/L = milligrams per liter; TDS = total dissolved solids. Results from samples collected in September and October 2023.

Cross section view figures for calcium (Figure 4-1a and 4-1b), chloride (Figure 4-2a and 4-2b), TDS (Figure 4-3a and 4-3b), and fluoride (Figures 4-4a and 4-4b) depict the distribution of concentrations for these four constituents within bedrock and the alluvial aquifer around the area of the BAP. Concentrations of calcium, chloride, fluoride and TDS are generally one to two orders of magnitude higher in bedrock than in the overlying alluvial aquifer, consistent with a regional brine signature. Therefore, the higher concentrations of calcium, chloride, fluoride, and TDS in the bedrock groundwater and the observed upward hydraulic gradients indicate the SSIs are attributable to the discharge of groundwater from bedrock to the overlying alluvial aquifer.

4.2 KYGER CREEK NORTH FLY ASH POND

4.2.1 BORON

Figure 4-5 depicts the distribution of boron concentrations across the BAP monitoring well network and the general horizontal flow path of boron from the northern boundary of the Kyger Creek

NFAP. This plume is consistent with the average observed daily groundwater flow vector as depicted on Figure 4-5, which is predominantly towards the north and/or northeast. The vector diagram summarizes transducer data collected from July 1, 2023, through November 7, 2023.

Boron concentrations and the approximated extent of boron impacts along the two primary flow directions (northeast and northward) from the Kyger Creek NFAP are also presented in cross section views (Figures 4-6a and 4-6b), as summarized by the following points:

- Monitoring well B-0904 is situated on Kyger Creek property downgradient of the Kyger Creek NFAP and upgradient of the BAP. Monitoring well B-0904 has historically had a higher boron concentration than any BAP well.
- BAC-17 was installed in 2022 as a replicant monitoring point for B-0904 (located on Kyger Creek property and no longer accessible for sampling). BAC-17 is located downgradient of the Kyger Creek NFAP and upgradient of the BAP, and is screened in both the separation layer and into the underlying alluvial aquifer, mirroring the well screen of B-0904. The concentration of boron in BAC-17 was 4.0 mg/L in October 2023, a higher concentration than was observed in any downgradient well at the BAP in H2 2023. This concentration is consistent with the range historically observed at B-0904 of 3.7-4.2 mg/L boron.
- The highest boron concentrations in BAP downgradient wells were measured at wells BAC-04 and BAC-05, which are located nearest to and downgradient from the Kyger Creek NFAP.
- Concentrations of boron decrease with distance downgradient from the Kyger Creek NFAP, along the northeastern flow path (i.e., from BAC-05 to BAC-03).
- Monitoring wells BAC-06 and BAC-07 demonstrated slightly lower concentrations than measured in groundwater from monitoring well BAC-17 (and historically monitoring well B-0904), likely due to the slightly deeper position of the well screens within the aquifer combined with the mixing of water discharged from the underlying bedrock aquifer into the alluvial aquifer (Figure 4-5).

Correspondence obtained from the OEPA regarding Kyger Creek NFAP concluded that groundwater below the NFAP appears to be impacted by a release from the Kyger Creek NFAP and that an assessment of groundwater should be conducted (Appendix A and Appendix B). Although groundwater around the Kyger Creek NFAP is not sampled for boron, the Kyger Creek SFAP data suggest that boron is present in groundwater below both Kyger Creek fly ash ponds. Table 4-2 summarizes boron analytical results from two groundwater sampling events conducted in March and October 2022 at monitoring wells downgradient of the Kyger Creek SFAP (AGES 2023). The highest concentrations were observed on the northeastern and southeastern boundaries of the SFAP. The northeastern boundary was interpreted to be downgradient from the Kyger Creek NFAP in 2020 (AGES 2021).

TABLE 4-2: KYGER CREEK SFAP BORON 2022 RESULTS

Analyte	Units	Maximum	Average
Boron	mg/L	16	8.1

Notes: mg/L = milligrams per liter; SFAP = South Fly Ash Pond.

The average concentration of boron (8.1 mg/L) in the Kyger Creek SFAP for 2022 is substantially higher than the maximum concentration of boron measured in groundwater beneath the BAP (2.5 mg/L) in fall 2023 from network wells. The Kyger Creek SFAP and the now-closed NFAP both contain fly ash generated at the Kyger Creek Generating Station. As such, it is reasonable to expect that the chemical characteristics of the fly ash are similar in both units. Given the elevated boron concentrations in groundwater downgradient of the Kyger Creek SFAP and considering that both units are unlined, elevated concentrations of boron in groundwater downgradient of the Kyger Creek NFAP would be expected. Thus, this evidence supports the conclusion that boron is present in groundwater at the Kyger Creek Generating Station.

4.2.2 SULFATE

Figure 4-7 depicts the distribution of sulfate concentrations across the BAP monitoring well network and includes results from four Kyger Creek NFAP monitoring wells screened in the alluvial aquifer. Figure 4-7 also depicts the general horizontal flow path of sulfate from the northern boundary of the Kyger Creek NFAP under pumping conditions, along with the approximated extent of sulfate impacts from the Kyger Creek NFAP and around the BAP. This plume is consistent with the average observed daily groundwater flow vector as depicted on Figure 4-7, which is predominantly towards the northeast.

According to the December 2023 Kyger Creek Generating Station Closed North Fly Ash Pond Groundwater Semiannual Data Analysis (OVEC 2023), sulfate is present in wells surrounding the NFAP at concentrations exceeding those observed in groundwater around the BAP. In October 2023, sulfate was present in monitoring well KC-9507 (located to the southeast of NFAP) at 876 mg/L and monitoring well KC-9502 (located to the northeast of the NFAP adjacent to the Gavin property boundary) at 363 mg/L. Toxicity Characteristic Leaching Procedure (TCLP) data included with the Permit to Install for the Ohio Valley Electric-Kyger Creek Plant North Fly Ash Pond Closure Project indicate that fly ash produced at Kyger Creek and placed in the NFAP leaches water with sulfate concentrations of 559 mg/L (OEPA 1996).

4.2.3 PH

The pH of groundwater emanating from the Kyger Creek NFAP was previously measured in well B-0904 and was historically slightly acidic (ERM 2018b). Acidic pH results of 5.58 and 5.73 were measured at B-0904 replicant well BAC-17 and Kyger Creek well KC-9502 (located at the northeast corner of Kyger Creek property) in October 2023, respectively (OVEC 2023; Appendix A). The low pH at KC-9502 has been observed since 1997 (Appendix A) and was identified by OEPA in 1998 (OEPA 1998; Appendix B). Table 4-3 summarizes the pH data in groundwater in sources around the BAP.

TABLE 4-3: GROUNDWATER AND SURFACE WATER PH VALUES

Location	pH (SU)
Kyger Creek NFAP: Upgradient BAP Groundwater (KC-9502; 25 October 2023)	5.73
Kyger Creek NFAP: Upgradient BAP Groundwater (B-0904; March 2020)	5.26
BAP: Upgradient Groundwater – Northwest (BAC-01, MW-1, and MW-6; September and October 2023)	6.84-7.14
BAP: Upgradient Groundwater – South (BAC-06, BAC-07, and BAC-17; September and October 2023)	5.58-6.62
BAP: Downgradient Groundwater (BAC-02 through BAC-05; September and October 2023)	5.89-6.64
BAP: Bedrock Groundwater (BAC-09, BAC-11, BAC-13, and BAC-19; September and October 2023)	7.09-7.72
Ohio River (November 2023)	6.93

Notes: BAP = Bottom Ash Pond; NFAP = North Fly Ash Pond; SU = Standard pH Units.

The fall 2023 results remain consistent with previous ASD Reports for the BAP (ERM 2018b; ERM 2019; ERM 2020; ERM 2021b; ERM 2022; ERM 2023). As shown in Figure 4-8, the distribution of pH and the northward flow direction demonstrate that low pH groundwater flows on-site from the Kyger Creek NFAP, where it mixes with upgradient alluvial groundwater, bedrock discharge, and water from the Ohio River, resulting in the intermediate pH observed in groundwater downgradient of the BAP. Monitoring wells BAC-06 and BAC-07 are not similarly impacted by acidic groundwater migrating from Kyger Creek, as evidenced by their higher pH. This is attributable to the well screens of BAC-06 and BAC-07 being substantially deeper than the well screens at B-0904 and BAC-17, lending to more influence by the regional discharge of groundwater from bedrock to the alluvial aquifer, as described further in Section 6.

5. LINKAGES OF CONSTITUENT CONCENTRATIONS AND DISTRIBUTIONS BETWEEN ALTERNATE SOURCES AND DOWNGRAIDENT WELLS

5.1 REGIONAL BRINE

As discussed in Section 4.1, the concentrations of calcium, chloride, fluoride and TDS are significantly higher in bedrock groundwater compared to alluvial groundwater, in particular at bedrock monitoring wells BAC-09 and BAC-11. Table 5-1 demonstrates that the concentration of calcium, chloride, fluoride, and TDS range from 13 to 673 times higher in bedrock compared to alluvial groundwater. Brine impacted bedrock groundwater is the alternate source of calcium, chloride, fluoride, and TDS. As described in Section 3.1, groundwater discharges from bedrock upward into the overlying alluvial aquifer (uppermost aquifer) under certain hydraulic conditions. The prevalence of pumping conditions in 2023 (active pumping on approximately 85% of days and during approximately 44% of the total 2023 monitoring period) increased upward hydraulic gradients from bedrock into the alluvial aquifer. The presence of higher concentrations of calcium, chloride, fluoride, and TDS establishes bedrock groundwater as the source, and the presence of upward hydraulic gradients is the linkage (i.e., the means to migrate) between the alternate source and downgradient wells.

TABLE 5-1: RATIO OF BEDROCK GROUNDWATER TO DOWNGRAIDENT BAP GROUNDWATER FOR REGIONAL BRINE

Analyte	Units	Maximum Brine-Impacted Groundwater in Bedrock Beneath BAP (As measured at BAC-09/ BAC-11)	Average Downgradient Well at BAP	Bedrock to Alluvial Aquifer Ratio
Calcium	mg/L	2,600	98	27:1
Chloride	mg/L	33,000	49	673:1
Fluoride	mg/L	1.6	0.12	13:1
TDS	mg/L	38,000	530	72:1

Notes: BAP = Bottom Ash Pond; mg/L = milligrams per liter; TDS = total dissolved solids. Results from samples collected in September and October 2023.

5.2 KYGER CREEK NORTH FLY ASH POND

As described in Section 3.3, the average direction of groundwater flow in the alluvial aquifer is generally to the north and northeast from the Kyger Creek NFAP across the eastern side of the BAP towards the water supply wells. Figures 4-5 and 4-7 show the linkage for boron and sulfate between the alternate source and the downgradient monitoring wells. Figure 4-8 shows the linkage for low pH groundwater between the alternate source and the downgradient monitoring wells.

5.2.1 BORON AND SULFATE

The maximum boron concentration measured in onsite groundwater monitoring wells at the BAP was 4.0 mg/L at BAC-17 (Figure 4-5). The average boron concentration observed at the SFAP in 2022 was 8.1 mg/L, with a maximum boron concentration reported to be 16 mg/L. Groundwater at the Kyger Creek NFAP is not analyzed for boron, but it is expected to have similar concentrations due to the materials placed there. The maximum sulfate concentration measured in upgradient onsite groundwater monitoring wells along the southern boundary of the BAP was 230 mg/L at BAC-06 in fall 2023, while the maximum sulfate concentrations observed at the NFAP in fall 2023 were 363 mg/L in well KC-9502 located in the northeast corner of the NFAP and 876 mg/L in well KC-9507 located in the southeast corner of the NFAP (Figure 4-7). The ratio of the maximum Kyger Creek concentrations to the maximum downgradient BAP well is provided in Table 5-2. These ratios, and the predominance of pumping-influenced flow directions to the northeast, demonstrate the linkage between boron and sulfate observed in downgradient BAP wells and Kyger Creek, the alternate source.

TABLE 5-2: RATIO OF KYGER CREEK GROUNDWATER TO DOWNGRADIENT BAP GROUNDWATER FOR BORON/SULFATE

Analyte	Units	Maximum Concentration		Ratio: Kyger Creek to Downgradient BAP
		Kyger Creek NFAP/SFAP (2022/2023)	Downgradient BAP Well (BAC-02/BAC-04)	
Boron	mg/L	16	2.5	6:1
Sulfate	mg/L	876	310	2.8:1

Notes: BAP = Bottom Ash Pond; mg/L = milligrams per liter.

Results from Gavin samples collected in September and October 2023, Kyger Creek NFAP samples collected in October 2023, and Kyger Creek SFAP samples collected in 2022.

5.2.2 PH

Table 5-3 summarizes the range of pH values measured at the Kyger Creek NFAP, the BAP and the Ohio River. The observed pH SSIs at the BAP were below the lower prediction limit of 6.63, which was derived based on background data from MW-1, BAC-01 and MW-6. BAP background groundwater, BAP bedrock groundwater and water from the Ohio River all have relatively neutral pH. Groundwater migrating from Kyger Creek NFAP has an acidic pH, as confirmed by the October 2023 pH measurement of 5.73 at monitoring well KC-9502, which is located approximately 150 feet south of the BAP. As discussed in Section 4.2.3, the low pH at KC-9502 has been observed since 1997 and was identified by OEPA in 1998 (Appendix B). As discussed in Section 3, groundwater migrating northward from the Kyger Creek NFAP mixes with upgradient groundwater migrating from the west and can mix with Ohio River water during high river stage conditions. This mixing of neutral and acidic waters causes groundwater at the downgradient BAP wells to become slightly acidic. These observations demonstrate the linkage between low pH groundwater observed in downgradient BAP wells and low pH groundwater from the Kyger Creek NFAP, the alternate source.

TABLE 5-3: COMPARISON OF BEDROCK, KYGER CREEK NFAP, AND DOWNGRADIANT BAP GROUNDWATER FOR PH

Analyte	Units	Lowest Measured		Upgradient Wells West of BAP	Bedrock Wells	Ohio River	Downgradient BAP Wells (Mixing Area)
		Onsite BAP Well (BAC-17)	Kyger Creek NFAP (KC-9502)				
pH	SU	5.58	5.73	6.84 – 7.14	7.09 – 7.72	6.93	5.89 – 6.64

Notes: BAP = Bottom Ash Pond; NFAP = North Fly Ash Pond; SU = Standard pH Units.

Results from Gavin samples collected in September and October 2023, Kyger Creek samples collected in October 2023, and Ohio River sample collected November 2023.

6. THE BAP IS NOT SUPPORTED AS THE SOURCE

6.1 EVALUATION OF POTENTIAL GROUNDWATER MOUNDING AT THE BAP

Programmable electronic data loggers equipped with a pressure-sensitive water level transducer were installed at four alluvial aquifer monitoring well transects (eight monitoring wells) at the southern, western, northern, and eastern boundaries of the BAP to evaluate the potential for groundwater mounding. These monitoring well couplets were chosen based on their proximity to one another, and to the BAP. Each well couplet included a well on top of the berm directly adjacent to the BAP, and the other at the exterior base of the berm, which allowed for the evaluation of hydraulic heads and resulting hydraulic gradients between each couplet. A signature of mounding would be identified by consistently higher potentiometric elevations at the well located at the top of the berm (closer to the BAP) compared to its counterpart at the base of the berm (further from the BAP). The four well couplet pairs included the following:

- BAC-01 (base of berm) and BAC-08 (top of berm), installed at the western boundary of the BAP;
- BAC-10 (base of berm) and BAC-02 (top of berm), installed at the northern boundary of the BAP;
- BAC-12 (base of berm) and BAC-04 (top of berm), installed at the eastern boundary of the BAP; and
- BAC-16 (base of berm) and BAC-18 (top of berm), installed at the southern boundary of the BAP.

Figure 6-1 shows the potentiometric elevation measured at BAC-01 is consistently higher than the potentiometric elevation measured at BAC-08 from August 2022 through January 2023. Although the transducer at BAC-08 was removed for repair in January 2023 and subsequently redeployed elsewhere, manual measurements made in March and April 2023 show the potentiometric elevation at BAC-01 is consistently higher than the potentiometric elevation at BAC-08. These observations are not consistent with mounding at the western boundary of the BAP.

Figure 6-2 shows the hydraulic relationship between BAC-10 and BAC-02 is largely controlled by the operation of the pumping wells located north of the BAP. Well BAC-10 is located closer to the pumping wells and typically has a lower potentiometric surface during times of pumping. This signature is consistent with greater drawdown at BAC-10 because it is closer to the water supply wells than BAC-02 and is not a result of mounding at the northern boundary at the BAP.

Figure 6-3 shows the potentiometric elevation measured at BAC-12 is consistently very similar to or higher than the potentiometric elevation measured at BAC-04 from August 2022 through November 2023. These observations are not consistent with mounding at the eastern boundary of the BAP.

Figure 6-4 shows the potentiometric elevation measured at BAC-16 is consistently very similar to or higher than the potentiometric elevation measured at BAC-18 from August 2022 through November 2023. These observations are not consistent with mounding at the southern boundary of the BAP.

6.2 OBSERVED BORON CONCENTRATIONS

Surface water samples at the BAP and Reclaim Pond were collected during each groundwater sampling event between 2016 and 2022. Prior to dewatering of the BAP, boron was consistently detected in surface water at 0.50 mg/L or lower, except for one event in 2019 when boron was measured at 1.30 mg/L. Table 6-1 compares the boron concentrations measured in surface water and monitoring wells. Based on this data, the boron concentration in the BAP surface water is too low to be the source of boron to the downgradient BAP wells. In contrast, groundwater flowing towards the BAP from under the Kyger Creek NFAP has consistently had a boron concentration higher than what is detected in downgradient groundwater. The average concentration at B-0904 from March 2018 to March 2020 was 3.95 mg/L, and BAC-17 had an average boron concentration of 3.98 mg/L from October 2022 to October 2023, making the NFAP the most likely source.

Boron in the environment typically exists as boric acid or the borate ion. Both species are water-soluble and are not sensitive to redox conditions. Although adsorption/desorption reactions occur, adsorption is strongest in slightly-to-moderately basic conditions (pH 7.5-10), which are not observed in groundwater around the BAP (ATSDR 2010). Therefore, it is not likely that oxidizing conditions present in surface water would impact boron concentrations in the BAP, nor is it likely that adsorption/desorption processes are significantly impacting the concentrations of boron in groundwater surrounding the BAP. Boron is expected to act as a conservative tracer due to its high solubility and mobility in water.

TABLE 6-1: BAP BORON RESULTS

Analyte	Units	Bottom Ash Pond ^a	Reclaim Pond ^a	Downgradient BAP Wells ^b
Boron	mg/L	0.44	0.51	2.0

^a Average sample results from February 2018 to October 2022.

^b Average sample results from September and October 2023.

6.3 LEACHING DATA

Based on leaching testing performed on bottom ash from the BAP, the CCR material present in the BAP does not yield concentrations of Appendix III parameters above background (or below background in the case of pH). Therefore, the BAP does not constitute a source of impact to groundwater.

Gavin collected composite bottom ash samples annually from the BAP. These samples were extracted by modified TCLP following method ASTM D3987 to evaluate the leaching potential of bottom ash material from the BAP. A summary of the results is included in Table 6-2, including minimum, maximum, and average leachate concentrations for the bottom ash samples from 2016 to 2023. Table 6-2 also includes applicable LPL and UPL values derived for the BAP Appendix III parameters, as well as the average of nine samples collected from monitoring well BAC-21, located west of the BAP to represent groundwater quality hydraulically upgradient and distant from the BAP.

TABLE 6-2: BAP TCLP RESULTS

Appendix III Parameter	Units	App III LPL	App III UPL	BAC-21 (Avg)	Gavin Modified TCLP			
					n	Min	Max	Avg
Fluoride	mg/L	-	0.161	0.08	8	<0.01	0.059	0.053
Chloride	mg/L	-	24.7	72	8	0.174	0.91	0.621
Sulfate	mg/L	-	140	131	8	2.1	42	10
TDS	mg/L	-	505	538	8	<10.0	56	29
pH	SU	6.63	7.22	6.84	8	6.5	9.7	8.02
Calcium	mg/L	-	129	130	4	3	12	6.1
Boron	mg/L	-	0.177	0.36	4	<0.1	<0.1	<0.1

Notes: n = number of samples available from 2016 to 2023; < = not detected at the listed reporting limit; SU = standard units.

These results indicate that the Appendix III parameters do not leach from Gavin bottom ash at concentrations above the Appendix III UPLs. We note that the pH SSI is for pH levels lower than the LPL, so the fact that the average pH level in the TCLP results is not only above the LPL but also above the UPL is further indication that the BAP is not the source of the low pH SSI. Leaching results are generally lower than background groundwater observed west of the BAP. Accordingly, concentrations observed in downgradient wells must be caused by a source other than the BAP.

6.4 CHEMICAL FINGERPRINTS

The geochemical fingerprints of surface water from the BAP, upgradient groundwater west of the BAP, groundwater flowing from the Kyger Creek NFAP, and surface water from the Ohio River were evaluated using the concentrations of parameters that are not expected to sorb strongly or participate in redox reactions. Boron, chloride, and potassium were chosen for these comparisons due to their higher water solubility, limited redox chemistry, and presence in groundwater around the BAP. Boron-chloride and boron-potassium plots are shown in Figure 6-5 and Figure 6-6, respectively.

The samples presented on the concentration plots were collected from 2016 through 2023. The primary observations based on the concentration plots (Figures 6-5 and 6-6) are the following:

- Multiple samples collected from a single location (e.g., the Ohio River or Well BAC-01) tended to be tightly clustered, indicating that the chemical signatures of individual locations were consistent over time.
- Monitoring wells collected from a similar environment (i.e., upgradient wells located west of the BAP) tended to have similar concentrations and plot near each other.
- Groundwater from BAP upgradient wells MW-1, BAC-01, and MW-6 has a unique signature with relatively low boron, chloride, and potassium. The Ohio River has similar concentrations of boron and chloride, but generally has a higher concentration of potassium.
- Groundwater migrating from the Kyger Creek NFAP is captured by monitoring wells B-0904 and BAC-17, which was installed to replace B-0904. Concentrations of boron, chloride, and potassium at these wells are similar. These wells are characterized by high boron and low chloride and potassium.

- Groundwater from BAP downgradient wells BAC-02, BAC-03, BAC-04, and BAC-05 has a signature similar to groundwater migrating onto Gavin from the Kyger Creek NFAP (B-0904 and BAC-17). BAC-05, which is located closest to the Kyger Creek NFAP, plots closest to the Kyger Creek NFAP groundwater, followed by BAC-04, BAC-03, and BAC-02, respectively. This is consistent with their distance from the Kyger Creek NFAP. Groundwater at these wells is characterized by high boron, with elevated chloride and potassium relative to Kyger Creek groundwater due to the influence of bedrock groundwater. Supplemental monitoring wells BAC-12 and BAC-14 have chemical fingerprints consistent with other BAP downgradient wells.
- Groundwater from monitoring wells BAC-06 and BAC-07 shows a distinct signature with similar concentrations of chloride and potassium to Kyger Creek NFAP groundwater, with lower but still elevated concentrations of boron. These wells are screened at a deeper interval than B-0904 and BAC-17, indicating that the boron plume flowing from the Kyger Creek NFAP is primarily located in the upper part of the alluvial aquifer.
- Groundwater from supplemental bedrock wells BAC-09, BAC-11, BAC-13, and BAC-19 has a unique signature with moderate concentrations of boron (comparable to those observed at some upgradient locations) and very high chloride. Chloride concentrations are up to three orders of magnitude higher in bedrock groundwater than in alluvial background groundwater, which is consistent with the interpretation of brine influencing Cow Run groundwater quality.
- Groundwater from supplemental upgradient monitoring wells located farther to west/northwest (BAC-21, BAC-22, and BAC-23) has a signature similar to the network upgradient wells, (MW-1, BAC-01 and MW-6) but with slightly more boron and potassium.
- Groundwater from supplemental separation layer monitoring well BAC-15 has a distinct signature characterized by moderate boron and potassium and very low chloride. This well has limited connectivity to surrounding groundwater due to the low hydraulic conductivity of the separation layer.
- BAP surface water through 2023 had a signature distinct from downgradient groundwater, characterized by moderate boron and chloride, with potassium concentrations higher than both upgradient and downgradient groundwater.

Based on the data summarized above and the chemical fingerprints of the groundwater at issue, the BAP is not deemed to be the source of the SSIs.

7. ALTERNATE SOURCE DATA ARE HISTORICALLY CONSISTENT WITH HYDROGEOLOGIC CONDITIONS AND FINDINGS OF THE MONITORING PROGRAM

7.1 REGIONAL BRINE

Regional groundwater flow regimes through fractured bedrock upgradient of the BAP were established after the last deglaciation, which occurred approximately 14,000 years ago (Hansen 2017). Enhancement of transmissivity in Ohio River Valley from stress-relief fracturing in bedrock provides conditions for bedrock to be interconnected to coarse glacial outwash alluvial deposits (USGS 1981; USGS, 1997). Regional groundwater within the fractured sedimentary bedrock in the Ohio River Valley generally flows from areas of higher topographic elevation towards areas of lower elevation, ultimately discharging to the Ohio River (ORSANCO 1984). Assuming a conservatively high effective porosity of 1 percent, estimated groundwater velocity values for the Morgantown Sandstone and Cow Run Sandstone units are approximately 77 feet per year and 31 feet per year, respectively. These flow rates would allow ample time for groundwater to migrate from upgradient regional background sources to Plant property. The data supporting these conclusions are historically consistent with hydrogeologic conditions and findings of the BAP monitoring program.

The discharge of brines is seen at a regional scale along the Ohio River with shallow wells near the Ohio River observing saltwater impacts; whereas, further from the Ohio River shallow wells report little to no brine impacts (USGS 1997). At the site, upward gradients between bedrock and alluvial wells near the Ohio River have been observed, and locations with the strongest observed upward gradients generally have high hydraulic conductivities, which supports the conclusion that bedrock and alluvial aquifers are hydraulically connected on-site. Additionally, the influence of pumping conditions further contributes to upward vertical gradients, as described in previous sections. Total dissolved solids concentrations observed in bedrock wells around the BAP are consistent with observations seen at brine-freshwater mixing zones at other brine-impacted sites (Yager et al. 2017). The regional and site-specific data are in strong agreement, therefore, and lead to the conclusion that regional brines are discharging under the BAP and mixing with alluvial groundwater underneath the BAP.

7.2 KYGER CREEK NORTH FLY ASH POND

The Kyger Creek NFAP was constructed in 1955 on a native soil base and without an engineered liner system to capture and contain leachate. The unit was used to manage fly ash until it was drained and closed from 1998 to 2000. However, despite closure, ash is still present within the Kyger Creek NFAP (AEP 1994). The NFAP was not capped with a low permeability barrier at the land surface, and therefore no barrier exists to prevent infiltration of precipitation, subsequent migration of water through highly leachable CCR materials in the subsurface and resulting recharge of sulfate and boron-impacted water to the alluvial aquifer. Approximately 900,000 cubic yards of boiler slag and boiler slag fines were also used as surface fill and as material to build berms. Both materials yielded low pH samples during leachability testing (OEPA 1996).

Groundwater in the alluvial aquifer flows from the Kyger Creek NFAP in a northeasterly direction toward the BAP. Given the six decades that this unit has contained fly ash and the alluvial aquifer groundwater velocity estimates of 130 to 200 feet per year, ample time has passed for groundwater to migrate from the Kyger Creek NFAP beneath the BAP. The following evidence therefore supports that the Kyger Creek NFAP is the alternate source of boron, sulfate, and low pH:

- The low concentration of boron in water from the BAP compared to the higher concentrations of boron in groundwater beneath the BAP (Section 4 and Section 6).
- Analytical results from groundwater samples collected for the Kyger Creek NFAP and SFAP suggest boron and sulfate are present in Kyger Creek groundwater and groundwater has an acidic pH. Given the similarity in construction and types of CCR managed, it is reasonable to interpret Kyger Creek SFAP groundwater results for boron are also representative of Kyger Creek NFAP groundwater quality (Section 4).
- TCLP data indicates that material placed in the Kyger Creek NFAP leaches high sulfate and low pH, while bottom ash from the BAP leaches low sulfate, low boron, and near-neutral pH.
- The chemical fingerprinting evidence suggests groundwater from Kyger Creek mixes with upgradient groundwater from west of the BAP, groundwater discharging from the bedrock, and water from the Ohio River water under the eastern portion of the BAP (Section 6).
- The OEPA has concluded that groundwater appears to be impacted by a release (i.e., elevated conductivity, sulfate, TDS, and low pH) from the Kyger Creek NFAP (Appendix A and Appendix B).

A comparison of the materials managed in the BAP provides evidence that the BAP is not the source of boron and that the Kyger Creek NFAP is a more likely source of boron. The Kyger Creek NFAP has contained fly ash since 1955, while the BAP has been used primarily for the management of bottom ash since 1974. Bottom ash and fly ash have different physical and chemical properties; laboratory investigations have demonstrated elements (including Appendix III constituents) have a much greater potential to leach from fly ash compared to bottom ash (Cox et al. 1978; Jones et al. 2012). The higher concentrations of boron observed in Kyger Creek SFAP groundwater compared to the lower concentration of boron observed in groundwater downgradient of the BAP are consistent with the known leaching properties of fly ash and bottom ash. Boron, therefore, is more likely to leach from the Kyger Creek SFAP/NFAP than the BAP based on the historical use of each unit. These observations support the conclusion that the Kyger Creek NFAP, and not the BAP, is the source of boron in groundwater under the BAP. Thus, the data supporting these conclusions are historically consistent with hydrogeologic conditions and findings of the BAP monitoring program.

8. CONCLUSIONS

The SSIs identified in this ASD Report are based on results from downgradient BAP monitoring well samples collected in September and October 2023. Review of data for quality assurance and statistical comparison was completed on December 5, 2023. In response to the SSIs, this ASD Report was prepared within the required 90-day period in accordance with 40 CFR § 257.94(e)(2).

SSIs in the downgradient BAP monitoring wells have been determined to result from alternate sources based on analysis of the gathered data: discharge of regional brine present in bedrock and the Kyger Creek Power Plant NFAP. Table 8-1 summarizes the six lines of evidence for each of the SSIs.

In conclusion, the BAP is not the source of the SSIs associated with the second semiannual sampling event groundwater results for 2023. Thus, Gavin will continue detection monitoring at the BAP in accordance with 40 CFR § 257.94(e)(2).

TABLE 8-1: BAP ASD SUMMARY

Analyte	SSI Location	Six Lines of Evidence from USEPA Guidance					
		Alternate Source	Hydraulic Connection	Constituent Present at Source or along Flow Path	Constituent Distribution More Strongly Linked to Alternate Source	Constituent Could Not Have Resulted from the BAP	Data Are Historically Consistent with Hydrogeologic Conditions

1 July to 7 November 2023

Notes:

- 1) Groundwater flow vector diagrams calculated using an R Studio Shiny application.
- 2) The approach was adapted from the EPA On-line Hydraulic Gradient Magnitude and Direction tool.
- 3) Transducer data were collected from 1 January through 7 November 2023.

Delivered Electronically

Mr. Marco Deshaies
Division of Surface Water
Ohio Environmental Protection Agency
Southeast District Office
2195 Front Street
Logan, Ohio 43138

Dear Mr. Deshaies:

**Re: Ohio Valley Electric Corporation
Kyger Creek Station- Closed North Fly Ash Pond
Groundwater Semi-annual Data Analysis**

Attached are field data (Attachment I) and laboratory analytical data (Attachment II) for the forty ninth set of semiannual samples collected on October 19, 2023, from groundwater monitoring wells KC-9501, KC-9502, KC-9504, KC-9507, KC-9508 and KC-9509 at the Ohio Valley Electric Corporation's (OVEC's) Kyger Creek Station.

In accordance with the groundwater sampling and analysis plan dated July 5, 1996, for the North Fly Ash Pond Closure Project (hereinafter referred to as "the Plan") and the statistical method notification letter dated October 20, 1999, the analytical results of the semiannual samples were statistically compared to the background data for the four Groundwater Contamination Indicator Parameters (alkalinity, specific conductivity, sulfate, and total dissolved solids) to determine if any significant change in groundwater quality has occurred. The statistical evaluation was performed by using the tolerance interval method for intrawell comparison in accordance with the Plan and notification letter.

An upper tolerance limit was calculated for each of the four parameters at each well using the background data set with a coverage of 95% (i.e., contains 95% of all possible sample measurements) and a tolerance coefficient of 95% (i.e., 95% degree of confidence with which the interval reaches the specified coverage).

The upper tolerance limits were constructed in accordance with "Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities, Interim Final Guidance" (U.S. EPA, 1989), using a one-sided tolerance factor of $K=3.188$ for $n=8$ found in Table 5 of Appendix B.

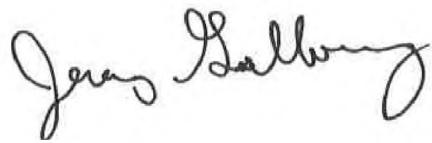

A summary of the sampling results as well as the calculated upper tolerance limits can

be seen for each well on the spreadsheets included under Attachment III.

In accordance with the Plan, verbal communication of parameters exceeding upper tolerance limits was provided to you via voicemail on 12/7/2023 detailing that the concentrations for the parameter alkalinity exceeded the upper tolerance limit at wells KC-9501, KC-9502, and KC-9507; the concentrations for the parameter sulfate exceeded the upper tolerance limit at wells KC-9501, KC-9502, KC-9507, and KC-9509; and the concentrations for the parameter total dissolved solids exceeded the upper tolerance limit at wells KC-9501, KC-9502, KC-9507, and KC-9509.

If you have any questions, please contact me at (740) 289-7259.

Sincerely,

A handwritten signature in black ink that reads "Jeremy Galloway". The signature is written in a cursive, flowing style.

Jeremy Galloway
Environmental Specialist

Water Analysis Report

Dolan Chemical Laboratory
4001 Bixby Road
Groveport, OH 43125
Phone: 614-836-4221
Audinet: 210-4221

Job ID: 233259

Customer: Kyger Creek Plant

Date Reported: 11/02/2023

Report Verification

This report and the above data have been confirmed by the following analyst.

Michael Ohlinger, Chemist

Email: msohlinger@aep.com

Phone: 614-836-4184

Audinet: 8-210-4184

THIS TEST REPORT RELATES ONLY TO THE ITEMS TESTED AND SHALL NOT BE REPRODUCED EXCEPT IN FULL WITHOUT WRITTEN APPROVAL OF THE LABORATORY. ALL TEST RESULTS MEET ALL OF THE REQUIREMENTS OF THE ACCREDITING AUTHORITY, UNLESS OTHERWISE NOTED. ALL TIMES LISTED ARE IN THE EASTERN TIME ZONE.

Data Qualifier Legend

U1 - Not detected at or above method detection limit (MDL).

J1 - Concentration estimated. Analyte was detected between the method detection limit and the reporting limit.

M1 - The associated matrix spike (MS) or matrix spike duplicate (MSD) recovery was outside acceptance limits.

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac Laboratories Inc., - Marietta, OH. If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed above.

I certify that all test results meet all of the requirements of the accrediting authority listed within this report. Analytical results are reported on a 'as received' basis unless specified otherwise. Analytical results for solids with units ending in (dry) are reported on a dry weight basis. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories. The reported results are related only to the samples analyzed as received.

RE: Project: M3K0262
Pace Project No.: 30637359

Dear Tiffany Bailey:

Enclosed are the analytical results for sample(s) received by the laboratory on November 07, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Carla Cmar

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

PROJECT NARRATIVE

Project: M3K0262
Pace Project No.: 30637359

Method: EPA 903.1
Description: 903.1 Radium 226
Client: Microbac Laboratories, Inc.-OH
Date: November 29, 2023

General Information:

6 samples were analyzed for EPA 903.1 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

PROJECT NARRATIVE

Project: M3K0262
Pace Project No.: 30637359

Method: EPA 904.0
Description: 904.0 Radium 228
Client: Microbac Laboratories, Inc.-OH
Date: November 29, 2023

General Information:

6 samples were analyzed for EPA 904.0 by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: M3K0262
Pace Project No.: 30637359

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: For Safe Drinking Water Act (SDWA) analyses, the reported Unc. is the calculated Count Uncertainty (95% confidence interval) using a coverage factor of 1.96. For all other matrices (non-SDWA), the reported Unc. is the calculated Expanded Uncertainty (aka Combined Standard Uncertainty, CSU), reported at the 95% confidence interval using a coverage factor of 1.96.

Gamma Spec: The Unc. reported for all gamma-spectroscopy analyses (EPA 901.1), is the calculated Expanded Uncertainty (CSU) at the 95.4% confidence interval, using a coverage factor of 2.0.

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

Subject: Ohio Valley Electric Corporation - Ground Water Quality Results for May 1998
(DDAGW #: 07/22/98-04-3-05-0 3757)

Date: August 28, 1998

Introduction

The Ohio Valley Electric Corporation (OVEC) site is located in Gallia County, Ohio on State Route 7 approximately five miles north of Gallipolis, Ohio. There are two fly ash ponds at the OVEC site: the north and the south ponds. The PTI for closure plan is only for the closure of the north pond, while the south pond will continue to be used for fly ash disposal. The PTI was approved without OVEC having to address DDAGW's comments on the proposed ground water monitoring plan. The geology of interest beneath the OVEC site consists of unconsolidated sand and gravel formations of the Ohio River Valley Aquifer. There are two industrial, nonpotable well fields up river and down river of the north and south ponds. The industrial well fields and the Ohio River are the major influence of the ground water flow patterns at the OVEC site.

There are ten ground water monitoring wells at the closure site (KC-9501 through KC-9510) However, only wells KC-9501, KC-9502, KC-9504, KC-9507, KC-9508 and KC-9509 have been selected by OVEC for ground water monitoring purposes. Dedicated bladder pumps have been installed in these six wells for sampling purposes. The ground water monitoring package submitted on July 10, 1998 included ground water data for these six wells. The package also included water level data for fourteen wells present at the site. The six wells are proposed to be sampled quarterly for two years. No up gradient well was sampled, which is necessary to determine if an intrawell statistical approach is appropriate. DDAGW has commented on this before, but OVEC maintains that they will implement the ground water monitoring program in the approved PTI, which does not include a background well being monitored.

In a previous IOC to DSW, DDAGW outlined that based upon a comparison of shallow wells verses deep wells it appears that the water quality at the OVEC site is being impacted. Please refer to the January 1998 IOC for further information on the November sampling results.

The following are DDAGW's comments on the ground water monitoring data results in the July 1998 submittal for the OVEC site.

Observations

1. Since no background well was sampled, DDAGW has made several comparisons with the ground water quality results to evaluate whether the north fly ash pond has impacted ground water. These comparisons include shallow wells to deep wells, the wells on site to two ambient stations within the Ohio River Valley Aquifer, and the two well clusters monitoring the north fly ash pond to the cluster on the southern side of the south fly ash pond. The following are several observations about the water quality.
 - a. The shallow wells tend to have lower pH and alkalinity than the deeper wells at two of the three locations. The shallow wells KC-9502 and KC-9507 show pH ranging between 5.61 to 5.75, while the deeper well at the respective clusters, KC-9501 and KC-9504, showed pH near 7.0. Alkalinity in the deeper well 9501 was 181 ug/l, while the shallower well 9502 was at 19 ug/l.
 - b. Shallow wells 9502 and 9507 have higher concentrations of manganese, and iron versus the deep wells 9501 and 9504. Well 9501 has a manganese concentration of 0.64 mg/l while the shallow well at the same cluster has a manganese concentration of 12.6 mg/l. Iron is 1.03 mg/l in the deep well (9504) but is 16.8 mg/l in shallow well (9507).
 - c. In addition to the iron and manganese, 9507 (shallow well) has slightly higher concentrations of magnesium (Mg), TDS and sulfate (SO₄) when compared to the deep well, 9504.
 - d. The water quality for the cluster 9508 and 9509 was very similar for all parameters.
 - e. There has been fairly good consistency in water quality between the three ground water sampling events that have been performed to date, with the following exceptions: well 9502 is showing an increasing trend of iron (3.79 in 10/97 to 6.67 in 5/98); conductivity in well 9507 dropped from 850 in 10/97 and 868 in 1/98 down to 499 in 5/98; 9508 is showing a slight increase in iron between the three events while manganese is slightly decreasing.
 - f. Shallow wells 9502 and 9507 are close to being directly down gradient of the north fly ash pond while 9508 is located side gradient, or southward, of the south fly ash pond. Since there is no real difference between the deep and shallow wells at the 9508/09 location it stands to reason that the differences in water quality between shallow and deep at the other two locations may be related to a release from the north fly ash pond. Alkalinity, barium, calcium and pH are higher in the shallow well 9508 than found in 9502 and 9507. Iron and manganese are much

higher in 9502 and 9507 verses 9508. TDS, sulfate, and magnesium are higher in 9507 than found at 9508.

- g. DDAGW maintains two ground water ambient stations within the Ohio River Valley Aquifer near the OVEC site. The Middleport Well #4 and the Gallia Rural Water #4 stations are located near the OVEC site. Water quality from July 1998 at these two ambient locations was compared to the water quality being found at the OVEC site. Magnesium, barium, sodium, calcium and chloride are all similar in concentration in the ambient wells as found at the OVEC site. However, iron and manganese levels are much higher (1 to 2 orders of magnitude higher) in all of the wells (shallow and deep) at the OVEC site when compared to the ambient water quality. Interestingly, the OVEC deep wells show very similar alkalinity to the ambient wells.

Comments

1. No water level map was submitted with the three water quality reports. A potentiometric map should be submitted with the water quality data report.
2. In the June 25, 1997 memo on the ground water quality SAP, DDAGW recommended the inclusion of the background well KC-9506 in the initial two year sampling. As noted, this is particularly important in determining if an intrawell statistical approach is the best method for evaluating whether a release has occurred. Given the water quality from the first three quarters of monitoring, it appears that there are differences in water quality between the shallow and deep wells in two of the three clusters. Other differences in water quality were also evaluated above. These differences in water quality may be reflective of a release to ground water from the north pond. If a release has occurred at the OVEC site, then intrawell statistics cannot be used to evaluate a release. In order for OVEC to effectively demonstrate that no release has occurred and that intrawell comparison is appropriate, DDAGW continues to recommend that KC-9506 be included in the sampling effort.
3. Based on the water quality data and the submitted water level depth data, DDAGW continues to recommend that another monitoring well cluster be installed between the clusters 9501/9502 and 9504/9507 on the east side of the north fly ash pond. OVEC declined to install this well cluster in 1997 given that OEPA approved the PTI without this well as a component of the proposed ground water monitoring program. If OVEC will not install this monitoring well as part of detection monitoring program, then the cluster would likely be installed during assessment activities. Based on the review of the water quality data it is likely that assessment activities will be necessary.

Conclusion

DDAGW has completed its review of the July 1998 Ground Water Quality Report for the North Pond closure at the OVEC site in Gallia County. DDAGW made several observations

concerning the water quality data generated to date. Based on the water quality data it appears that there is a difference in water quality between the shallow and deep portions of the Ohio River Valley Aquifer on the down gradient side of the site. This may be an indication of a release from the north or south ponds. Should you have any further questions regarding this review or the site in general, please contact me.

From: Steve Lowry through Steve Williams DDAGW, SEDO.
Date: February 7, 2017
RE: Ohio Valley Electric Corporation (OVEC), Kyger Creek Station, North Fly Ash Pond Closure Project, Internal Technical Review, Ground Water Program, Gallia County, OIB00005*PD
Subject: Review of the December 2015, May 2016 and December 2016 North Fly Ash Pond Closure Project Semi-annual groundwater sampling results.

INTRODUCTION

The DDAGW has reviewed the December 14, 2015, May 25, 2016 and the December 2, 2016 dated submittals containing the semiannual groundwater sampling and statistical analysis results from the North Fly Ash Pond Closure Project. These reports include data from the corresponding October 2015, April 2016 and October 2016 sampling events.

Groundwater monitoring of the North Fly Ash Pond is required as part of a January 15, 1997 PTI. Groundwater monitoring at the site began in October of 1997. The North Pond is closed and located immediately north of the adjacent and open South Fly Ash Pond. The North Fly Ash Pond was first used in the 1950's.

The statistical evaluations of groundwater quality contained in the above noted submittals indicate that the upper tolerance limits for the following parameters were exceeded at the following wells:

Alkalinity at wells KC-9501 and KC-9502, exceeded during all three sampling events.

Sulfate at wells KC-9508 and KC-9509, exceeded during all three sampling events, and at well KC-9502 during both 2016 events and KC-9504 during the October 2015 event.

TDS at wells KC-9508 and KC-9509, exceeded during all three sampling events.

Conductivity at well KC-9508 exceeded during the October 2016 sampling event.

Statistical exceedances have been declared by the facility for at least one parameter per sampling event since the beginning of the statistical evaluations, in October of 1999. As with past submittals, OVEC contends that "these statistical exceedances are due to natural variation and not associated with the North Fly Ash Closure Project".

The PTI does not include any provisions for further investigations related to the statistical increases, or for an assessment of the groundwater quality.

BACKGROUND

The facility has been conducting semi-annual groundwater monitoring at the North Fly Ash Pond since 1997. The PTI "Groundwater Sampling and Analysis Plan" is a rather brief document. The plan outlines sampling protocols and parameters and requires a statistical analysis of the four indicator parameters and a requirement to notify Ohio EPA of any statistically significant increases within 15 days of receipt of the analysis. As noted above, the plan does not contain any requirements for additional investigations or for the implementation of a groundwater assessment.

Per the PTI, during the spring sampling event, the statistical parameters of Alkalinity, Specific Conductance, Sulfate and TDS are collected and analyzed. During each fall sampling event, the above four parameters and an additional 12 water quality parameters are collected. The above three noted submittals contain the field parameters for the six sampled wells, total water depth measurements, river stage measurements, the laboratory data sheets for the sampled parameters, and a table that shows the sampling results for each parameter and the intra-well 95% confidence interval value for each of the statistical parameters.

Groundwater flow maps were not included in the submitted documents. The groundwater flow direction at the site is difficult to accurately determine due to the limited number of water level measurements included in the submittals. The lack of a submitted water level from an upgradient well also hinders evaluation of groundwater flow directions. Additionally, clarification may be necessary as water level data appears to be reported as a depth to water, from the top of the monitoring well inner casing, as opposed to mean sea level.

The North Fly Ash Pond is monitored by six wells which represent three well clusters, each monitoring two separate units. These wells are screened in sand and gravel deposits associated with the Ohio River. The wells range in depth from approximately 34 feet to 94 feet below grade. The well screens of each well cluster are separated by a distance of approximately two to five feet. The well clusters (shallow listed first) are grouped as follows: KC-9502/KC-9501, KC-9507/KC-9504, and KC-9509/KC-9508. Groundwater monitoring was not initiated at the North Fly Ash Pond until approximately 40 years after waste placement was initiated.

Wells KC-9509/KC-9508 are located primarily downgradient of the South Fly Ash Pond. These wells show the most significant impact to groundwater. The shallow well KC-9509 is showing statistically significant increases in conductivity, TDS and sulfate. Conductivity has increased from 485 umohs/cm in 1997 to 1,126 umoh/cm in 2016. TDS has increased from 603 mg/l to 779 mg/l and sulfate has increased from 241 mg/l to 460 mg/l over the same time period. The deeper well KC-9508 is showing

statistically significant increases in TDS and sulfate along with a visually increasing trend in conductivity since 2010. TDS in well KC-9508 has increased from 558 mg/l in 1997 to 866 mg/l in 2016, sulfate has increased from 190 mg/l in 2010 to 420 mg/l in 2016 and conductivity has increased from 512 umohs/cm in 1997 to 1,296 umoh/cm over the same time period.

Wells KC-9501/9502, located at the northernmost portion of the North Fly Ash Pond, has shown a statistically significant increase in alkalinity in both wells. Alkalinity in well KC-9501 has increased from 169 mg/l to 260 mg/l, and well KC-9502 from 19 mg/l to 45.7 mg/l over the 1997 to 2016 time period.

Wells KC 9507/9504 located downgradient of the North Fly Ash Pond reveals mostly decreasing trends in all statistically evaluated parameters, with the exception of deep well KC-9504, which has a statistically increasing trend for sulfate. The sulfate concentration in well KC-9504 started out at a concentration of 327 mg/l in 1997 and is currently at 423 mg/l. The sulfate concentration in this well was as high as 820 mg/l in 2008. The trend for sulfate in this well has been decreasing since 2008. TDS in this well is currently at a concentration of 757 mg/l with a past high of 1480 mg/l in 2008.

For comparison purposes, un-impacted groundwater from Ohio River sand and gravel deposits, from the Proctorville Wellfield (Lawrence County), reveal the following average concentrations: Alkalinity 58.2 mg/l, Conductivity 320.1 umhos/cm, TDS 195.7 mg/l and Sulfate 46.1 mg/l.

The sampling of additional existing groundwater monitoring wells, such as background well KC-9506 and possibly the KC-9505/9503 cluster may provide additional information regarding groundwater quality, flow directions and the extent of impacted ground water in the area of the North Fly Ash Pond. The installation of additional appropriately placed downgradient wells would also allow for a more meaningful evaluation of groundwater quality and flow directions in the area of the North Fly Ash Pond.

As shown in the December 14, 2015, the May 25, 2016 and the December 2, 2016 dated submittals titled "North Fly Ash Pond Closure Project, Groundwater Semiannual Data Analysis" the drinking water health standard was exceeded in all six monitoring wells for the parameter manganese. DDAGW will conduct a detailed review of potential receptors in the area. However, a preliminary review shows no private wells or public well fields immediately down gradient of the Kyger Creek Station, North Fly Ash Pond Closure Project.

RECOMMENDATIONS

1. The DDAGW has reviewed the December 14, 2015, the May 25, 2016 and the December 2, 2016 dated submittals titled "North Fly Ash Pond Closure Project,

Groundwater Semiannual Data Analysis". In these documents OVEC has presented the results of a statistical analysis of groundwater and concluded that the nine statistical exceedances are due to "natural variation and not associated with the North Fly Ash Pond Closure Project". The DDAGW does not concur with OVEC's statement that "these statistical exceedances are due to natural variation and are not associated with the North Fly Ash Closure Project". OVEC has not undertaken any known field activities to demonstrate that the statistically elevated concentrations of sulfate, TDS, Conductivity or Alkalinity are not the result of the operation of the North Fly Ash Pond. The DDAGW recommends that an assessment of groundwater quality be conducted at the North Fly Ash Pond.

To better evaluate the declared statistical exceedances, the DDAGW recommends that OVEC make improvements to the groundwater monitoring system for the North Fly Ash Pond and then conduct an assessment of groundwater quality as outlined in Attachment "G" of Guidance Document GD0303.010 titled "Ground Water Monitoring Program Plan Requirements for Wastewater Facilities".

2. The DDAGW recommends the following improvements be made to the groundwater monitoring network at the North Fly Ash Pond:
 - a. That water level measurements and groundwater sampling results from background well KC-9506 be included in all future submittals. This sampling data point would represent background water quality for the North Fly Ash Pond and allow for a more meaningful evaluation of groundwater quality.
 - b. That water level measurements from well KC-9510, KC-9503 and KC-9505 also be included in all future submittals.
 - c. That OVEC evaluate the usefulness of including wells KC9503 and KC-9505 into the groundwater monitoring network.
 - d. That the 10 groundwater monitoring wells installed in the area of the North Fly Ash Pond (KC-9501 to KC-9510) be resurveyed to ensure that the collected water level measurements accurately reflect site conditions.
 - e. That future submittals include ground water flow maps derived from the above noted monitoring wells and that the water level measurements are recorded in reference to mean sea level.
 - f. That upon determining current groundwater flow directions in the area of the North Fly Ash Pond, OVEC evaluate the adequacy of the current groundwater monitoring network. At this time the installation of an additional shallow groundwater monitoring well between existing wells KC9502 and KC-9507 appears to be appropriate.

Conclusion

The DDAGW has reviewed the December 14, 2015, May 25, 2016 and the December 2, 2016 dated submittals titled North Fly Ash Pond Closure Project submittals. The DDAGW has recommended that OVEC make improvements to the groundwater monitoring network at the North Fly Ash Pond and that an assessment of groundwater quality be conducted.

Notes:
FD = Field duplicate sample
N = Normal environmental sample
deg C = Degree Celcius
mg/L = Milligrams per liter
mV = Millivolts
NTU = Nephelometric Turbidity Unit
uS/cm = Microsiemens per centimeter
pCi/L = Picocuries per liter
B: Compound was found in the blank and sample.
J: Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value.
U: Indicates the analyte was analyzed for but not detected.
F1 = MS and/or MSD Recovery is outside acceptance limits.
Empty cells = Not analyzed

Notes:
FD = Field duplicate sample
N = Normal environmental sample
deg C = Degree Celcius
mg/L = Milligrams per liter
mV = Millivolts
NTU = Nephelometric Turbidity Unit
uS/cm = Microsiemens per centimeter
pCi/L = Picocuries per liter
B: Compound was found in the blank and sample.
J: Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value.
U: Indicates the analyte was analyzed for but not detected.
F1 = MS and/or MSD Recovery is outside acceptance limits.
Empty cells = Not analyzed

Notes:
FD = Field duplicate sample
N = Normal environmental sample
deg C = Degree Celcius
mg/L = Milligrams per liter
mV = Millivolts
NTU = Nephelometric Turbidity Unit
uS/cm = Microsiemens per centimeter
pCi/L = Picocuries per liter
B: Compound was found in the blank and sample.
J: Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value.
U: Indicates the analyte was analyzed for but not detected.
F1 = MS and/or MSD Recovery is outside acceptance limits.
Empty cells = Not analyzed

N = Normal environmental sample
deg C = Degree Celcius
mg/L = Milligrams per liter
mV = Millivolts
NTU = Nephelometric Turbidity Unit
uS/cm = Microsiemens per centimeter
pCi/L = Picocuries per liter
B: Compound was found in the blank and sample.
J: Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value.
U: Indicates the analyte was analyzed for but not detected.
F1 = MS and/or MSD Recovery is outside acceptance limits.
Empty cells = Not analyzed

JOB DESCRIPTION

Federal CCR Wells

JOB NUMBER

240-183219-1

Eurofins Cleveland

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Rad

Qualifier	Qualifier Description
F	MS/MSD Recovery and/or RPD exceeds the control limits
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Lightstone Generation Gavin Power LLC
Project/Site: Federal CCR Wells

Job ID: 240-183219-1

Job ID: 240-183219-1

Laboratory: Eurofins Cleveland

Narrative

**Job Narrative
240-183219-1**

Revised 6/06/2023 to include Calcium per client request.

Receipt

The sample was received on 4/7/2023 8:00 AM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 1.4°C, 1.6°C, 1.8°C, 1.8°C, 2.0°C and 2.4°C

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter

Method 9315_Ra226: Radium-226 batch 608150: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-19-F-20230405-01 (240-183219-1), (LCS 160-608150/2-A), (MB 160-608150/1-A)

Method 9320_Ra228: Radium-228 batch 608160: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-19-F-20230405-01 (240-183219-1), (LCS 160-608160/2-A), (MB 160-608160/1-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Method Summary

Client: Lightstone Generation Gavin Power LLC

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: Taylor Huffman
Lightstone Generation Gavin Power LLC
7397 OH-7
Cheshire, Ohio 45620

Generated 6/6/2023 8:58:13 AM Revision 1

JOB DESCRIPTION

Federal CCR Wells

JOB NUMBER

240-183255-1

Eurofins Cleveland

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Qualifiers

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
^1+	Initial Calibration Verification (ICV) is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.
X	Carrier is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 240-183255-1

Laboratory: Eurofins Cleveland

Narrative

Job Narrative 240-183255-1

Revised 6/06/2023 to include Calcium per client request.

Receipt

The samples were received on 4/11/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 1.6°C, 1.8°C, 2.3°C, 2.6°C and 14.0°C

Metals

Method 6020B: The continuing calibration verification (CCV) associated with batch 240-569329 recovered above the upper control limit for beryllium. The samples associated with this CCV were less than the reporting limit for the affected analyte; therefore, the data have been reported. The associated samples are impacted: BAC-11-F-20230406-01 (240-183255-1), BAC-09-F-20230406-01 (240-183255-2), DUP-004-BAC-09-F-20230406-01 (240-183255-3), BAC-17-F-20230406-01 (240-183255-4) and BAC-15-F-20230406-01 (240-183255-5).

Method 6020B: The continuing calibration verification (CCV) associated with batch lithium recovered above the upper control limit for lithium. The samples associated with this CCV were less than the reporting limit for the affected analyte; therefore, the data have been reported. The associated sample is impacted: BAC-17-F-20230406-01 (240-183255-4).

Method 6020B: The following samples were diluted due to the nature of the sample matrix: BAC-11-F-20230406-01 (240-183255-1) and DUP-004-BAC-09-F-20230406-01 (240-183255-3). Elevated reporting limits (RLs) are provided.

Method 6020B: The initial calibration verification Low (ICVL) result for batch 240-569715 was above the upper control limit. Sample results were non-detects, and have been reported as qualified data.

Method 6020B: The following sample was diluted due to the nature of the sample matrix: BAC-13-F-20230407-01 (240-183255-7). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method 300.0_28D: The following samples were diluted due to the nature of the sample matrix: BAC-11-F-20230406-01 (240-183255-1) and BAC-13-F-20230407-01 (240-183255-7). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter

Method 9315_Ra226: Radium-226 Prep Batch 160-608036: The following samples were prepared at a reduced aliquot due to Matrix: DUP-004-BAC-09-F-20230406-01 (240-183255-3), BAC-17-F-20230406-01 (240-183255-4), BAC-15-F-20230406-01 (240-183255-5), BAC-05-F-20230407-01 (240-183255-9), BAC-03-F-20230407-01 (240-183255-10) and MW-1-F-20230407-01 (240-183255-11). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

Method 9315_Ra226: Radium-228 Prep Batch 160-608036: Insufficient sample volume was available to perform a sample duplicate for the following samples: EB-001-F-20230406-01 (240-183255-6), BAC-13-F-20230407-01 (240-183255-7), BAC-04-F-20230407-01 (240-183255-8), MW-6-F-20230407-01 (240-183255-12) and EB-001-F-20230407-01 (240-183255-13). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method 9315_Ra226: Radium 226 prep batch 160-608041: The barium carrier recovery is outside the upper control limit (110%) for the following sample: BAC-11-F-20230406-01 (240-183255-1). There was physical evidence of matrix interference apparent during the initial preparation of the sample. The QC samples associated with the batch have acceptable carrier recovery indicating the presence of matrix interference.

Case Narrative

Client: Lightstone Generation Gavin Power LLC
Project/Site: Federal CCR Wells

Job ID: 240-183255-1

Job ID: 240-183255-1 (Continued)

Laboratory: Eurofins Cleveland (Continued)

Method 9315_Ra226: Radium-226 608041: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-11-F-20230406-01 (240-183255-1), BAC-09-F-20230406-01 (240-183255-2), (LCS 160-608041/2-A), (MB 160-608041/1-A)

Method 9315_Ra226: Radium-226 batch 608036: The detection goal was not met for the following samples. Samples were prepped at a reduced volume due to the presence of matrix interferences: BAC-15-F-20230406-01 (240-183255-5), (280-174618-C-5-G) and (280-174618-C-5-H DU). Analytical results are reported with the detection limit achieved.

Method 9315_Ra226: Radium-226 batch 608036: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DUP-004-BAC-09-F-20230406-01 (240-183255-3), BAC-17-F-20230406-01 (240-183255-4), BAC-15-F-20230406-01 (240-183255-5), EB-001-F-20230406-01 (240-183255-6), BAC-13-F-20230407-01 (240-183255-7), BAC-04-F-20230407-01 (240-183255-8), BAC-05-F-20230407-01 (240-183255-9), BAC-03-F-20230407-01 (240-183255-10), MW-1-F-20230407-01 (240-183255-11), MW-6-F-20230407-01 (240-183255-12), EB-001-F-20230407-01 (240-183255-13), (LCS 160-608036/2-A), (LCSD 160-608036/3-A), (MB 160-608036/1-A)

Method 9320_Ra228: Radium-228 Prep Batch 160-608040: The following samples were prepared at a reduced aliquot due to Matrix: DUP-004-BAC-09-F-20230406-01 (240-183255-3), BAC-17-F-20230406-01 (240-183255-4), BAC-15-F-20230406-01 (240-183255-5), BAC-05-F-20230407-01 (240-183255-9) and BAC-03-F-20230407-01 (240-183255-10). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

Method 9320_Ra228: Radium-228 Prep Batch 160-608040: Insufficient sample volume was available to perform a sample duplicate for the following samples: EB-001-F-20230406-01 (240-183255-6), BAC-13-F-20230407-01 (240-183255-7), BAC-04-F-20230407-01 (240-183255-8), MW-1-F-20230407-01 (240-183255-11), MW-6-F-20230407-01 (240-183255-12) and EB-001-F-20230407-01 (240-183255-13). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method 9320_Ra228: Radium 228 prep batch 160-608055: The barium carrier recovery is outside the upper control limit (110%) for the following sample: BAC-11-F-20230406-01 (240-183255-1). There was physical evidence of matrix interference apparent during the initial preparation of the sample. The QC samples associated with the batch have acceptable carrier recovery indicating the presence of matrix interference.

Method 9320_Ra228: Radium-228 batch 608040: The detection goal was not met for the following samples. Samples were prepped at a reduced volume due to the presence of matrix interferences: DUP-004-BAC-09-F-20230406-01 (240-183255-3), BAC-15-F-20230406-01 (240-183255-5). Analytical results are reported with the detection limit achieved.

Method 9320_Ra228: Radium-228 batch 608040: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DUP-004-BAC-09-F-20230406-01 (240-183255-3), BAC-17-F-20230406-01 (240-183255-4), BAC-15-F-20230406-01 (240-183255-5), EB-001-F-20230406-01 (240-183255-6), BAC-13-F-20230407-01 (240-183255-7), BAC-04-F-20230407-01 (240-183255-8), BAC-05-F-20230407-01 (240-183255-9), BAC-03-F-20230407-01 (240-183255-10), MW-1-F-20230407-01 (240-183255-11), MW-6-F-20230407-01 (240-183255-12), EB-001-F-20230407-01 (240-183255-13), (LCS 160-608040/2-A), (LCSD 160-608040/3-A), (MB 160-608040/1-A)

Method 9320_Ra228: Radium-228 batch 608055: The detection goal was not met for the following sample. Sample was prepped at a reduced volume due to the presence of matrix interferences: BAC-09-F-20230406-01 (240-183255-2). Analytical results are reported with the detection limit achieved.

Method 9320_Ra228: Radium-228 batch 608055: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-11-F-20230406-01 (240-183255-1), BAC-09-F-20230406-01 (240-183255-2), (LCS 160-608055/2-A), (MB 160-608055/1-A)

Case Narrative

Project/Site: Federal CCR Wells

Job ID: 240-183255-1

Job ID: 240-183255-1 (Continued)

Laboratory: Eurofins Cleveland (Continued)

Method 9320_Ra228: Radium-228 batch 608055: The following sample has a barium carrier recovery above the 110% QC limit. Affected samples had a barium correction applied, however, there is significant concentrations of salt-like compounds (i.e. calcium, magnesium, sodium, and strontium) that can interfere with a barium sulfate recovery. The LCS (laboratory control sample) has an acceptable spike recovery demonstrating acceptable sample preparation and instrument performance. The samples have been truncated to 100% to reduce any potential bias a high carrier recovery may have. The data have been qualified and reported. BAC-11-F-20230406-01 (240-183255-1)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: Lightstone Generation Gavin Power LLC
 Project/Site: Federal CCR Wells

Job ID: 240-183255-1

Client Sample ID: BAC-11-F-20230406-01

Lab Sample ID: 240-183255-1

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Boron	380		100	57	ug/L	1		6010D	Total Recoverable
Barium	140000		50	22	ug/L	10		6020B	Total Recoverable
Cobalt	2.7	J	10	1.9	ug/L	10		6020B	Total Recoverable
Lithium	320		80	17	ug/L	10		6020B	Total Recoverable
Magnesium	660000		10000	610	ug/L	10		6020B	Total Recoverable
Potassium	22000		10000	2200	ug/L	10		6020B	Total Recoverable
Sodium	9200000		10000	3300	ug/L	10		6020B	Total Recoverable
Calcium	2200000		10000	2500	ug/L	10		6020B	Total Recoverable
Total Alkalinity	39		5.0	2.6	mg/L	1		2320B-1997	Total/NA
Bicarbonate Alkalinity as CaCO3	39		5.0	2.6	mg/L	1		2320B-1997	Total/NA
Chloride	23000		500	64	mg/L	500		300.0	Total/NA
Total Dissolved Solids	38000		1000	780	mg/L	1		SM 2540C	Total/NA

Client Sample ID: BAC-09-F-20230406-01

Lab Sample ID: 240-183255-2

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Boron	250		100	57	ug/L	1		6010D	Total Recoverable

1. Cooler temperature upon receipt See Multiple Cooler Form
 IR GUN # 22 (CF +0.0 °C) Observed Cooler Temp. _____ °C Corrected Cooler Temp. _____ °C

2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity leach Yes No
 -Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
 -Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No NA
 -Were tamper/custody seals intact and uncompromised? Yes No NA
 3. Shippers' packing slip attached to the cooler(s)? Yes No
 4. Did custody papers accompany the sample(s)? Yes No
 5. Were the custody papers relinquished & signed in the appropriate place? Yes No
 6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
 7. Did all bottles arrive in good condition (Unbroken)? Yes No
 8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No
 9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)? Yes No
 10. Were correct bottle(s) used for the test(s) indicated? Yes No
 11. Sufficient quantity received to perform indicated analyses? Yes No
 12. Are these work share samples and all listed on the COC? Yes No
- If yes, Questions 13-17 have been checked at the originating laboratory.
13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC203864
 14. Were VOAs on the COC? Yes No NA
 15. Were air bubbles >6 mm in any VOA vials? Larger than this. Yes No NA
 16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No NA
 17. Was a LL Hg or Me Hg trip blank present? Yes No

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing North Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing North Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing North Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing North Central, LLC.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

JOB DESCRIPTION

Federal CCR Wells

JOB NUMBER

240-183288-1

Eurofins Cleveland

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job ID: 240-183288-1

Qualifiers

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
F1	MS and/or MSD recovery exceeds control limits.
F3	Duplicate RPD exceeds the control limit
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Lightstone Generation Gavin Power LLC
Project/Site: Federal CCR Wells

Job ID: 240-183288-1

Job ID: 240-183288-1

Laboratory: Eurofins Cleveland

Narrative

Job Narrative 240-183288-1

Revised 6/06/2023 to include Calcium per client request.

Receipt

The samples were received on 4/11/2023 1:45 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 0.4°C, 0.7°C, 0.9°C, 2.3°C, 3.7°C and 23.8°C

Metals

Method 6020B: The continuing calibration verification (CCV) associated with batch 240-569329 recovered above the upper control limit for beryllium. The samples associated with this CCV were less than the reporting limit for the affected analyte; therefore, the data have been reported. The associated samples are impacted: BAC-01-F-20230410-01 (240-183288-2), BAC-21-F-20230410-01 (240-183288-3), BAC-22-F-20230410-01 (240-183288-4) and EB-001-F-20230410-01 (240-183288-5).

Method 6020B: The continuing calibration verification (CCV) associated with batch lithium recovered above the upper control limit for lithium. The samples associated with this CCV were less than the reporting limit for the affected analyte; therefore, the data have been reported. The associated samples are impacted: BAC-01-F-20230410-01 (240-183288-2), BAC-21-F-20230410-01 (240-183288-3), BAC-22-F-20230410-01 (240-183288-4) and EB-001-F-20230410-01 (240-183288-5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method 2320B: Reanalysis of the following samples was performed outside of the analytical holding time due to failure of quality control parameters in the initial analysis. BAC-02-F-20230410-01 (240-183288-1), BAC-01-F-20230410-01 (240-183288-2), BAC-21-F-20230410-01 (240-183288-3), BAC-22-F-20230410-01 (240-183288-4) and EB-001-F-20230410-01 (240-183288-5)

Method 300.0_28D: The following sample(s) was analyzed outside of analytical holding time due to instrument error. BAC-02-F-20230410-01 (240-183288-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter

Method 9315_Ra226: Radium-226 Prep Batch 160-608036 The following samples were prepared at a reduced aliquot due to Matrix: BAC-02-F-20230410-01 (240-183288-1), BAC-01-F-20230410-01 (240-183288-2), BAC-21-F-20230410-01 (240-183288-3), BAC-21-F-20230410-01 (240-183288-3[MSJ]), BAC-21-F-20230410-01 (240-183288-3[MSD]) and BAC-22-F-20230410-01 (240-183288-4). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

Method 9315_Ra226: Radium-226 batch 608036: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-02-F-20230410-01 (240-183288-1), BAC-01-F-20230410-01 (240-183288-2), BAC-21-F-20230410-01 (240-183288-3), BAC-21-F-20230410-01 (240-183288-3[MSJ]), BAC-21-F-20230410-01 (240-183288-3[MSD]), BAC-22-F-20230410-01 (240-183288-4), (LCS 160-608036/2-A), (LCSD 160-608036/3-A), (MB 160-608036/1-A)

Method 9315_Ra226: Radium-226 batch 608190: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. EB-001-F-20230410-01 (240-183288-5), (LCS 160-608190/2-A), (MB 160-608190/1-A)

Method 9320_Ra228: Radium-228 Prep Batch 160-608040: The following samples were prepared at a reduced aliquot due to Matrix:

Case Narrative

Client: Lightstone Generation Gavin Power LLC
Project/Site: Federal CCR Wells

Job ID: 240-183288-1

Job ID: 240-183288-1 (Continued)

Laboratory: Eurofins Cleveland (Continued)

BAC-02-F-20230410-01 (240-183288-1), BAC-01-F-20230410-01 (240-183288-2), BAC-21-F-20230410-01 (240-183288-3), BAC-21-F-20230410-01 (240-183288-3[MSJ]), BAC-21-F-20230410-01 (240-183288-3[MSD]) and BAC-22-F-20230410-01 (240-183288-4). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

Method 9320_Ra228: Radium-228 batch 608040: The detection goal was not met for the following sample. Samples were prepped at a reduced volume due to the presence of matrix interferences: BAC-02-F-20230410-01 (240-183288-1). Analytical results are reported with the detection limit achieved.

Method 9320_Ra228: Radium-228 batch 608040: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-02-F-20230410-01 (240-183288-1), BAC-01-F-20230410-01 (240-183288-2), BAC-21-F-20230410-01 (240-183288-3), BAC-21-F-20230410-01 (240-183288-3[MSJ]), BAC-21-F-20230410-01 (240-183288-3[MSD]), BAC-22-F-20230410-01 (240-183288-4), (LCS 160-608040/2-A), (LCSD 160-608040/3-A), (MB 160-608040/1-A)

Method 9320_Ra228: Radium-228 batch 608193: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. EB-001-F-20230410-01 (240-183288-5), (LCS 160-608193/2-A), (MB 160-608193/1-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

1. Cooler temperature upon receipt See Multiple Cooler Form
IR GUN # 13 (CF +2 °C) Observed Cooler Temp. _____ °C Corrected Cooler Temp. _____ °C

- 2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity _____ Yes No
 -Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
 -Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No
 -Were tamper/custody seals intact and uncompromised? Yes No NA
- 3. Shippers' packing slip attached to the cooler(s)? Yes No
- 4. Did custody papers accompany the sample(s)? Yes No
- 5. Were the custody papers relinquished & signed in the appropriate place? Yes No
- 6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
- 7. Did all bottles arrive in good condition (Unbroken)? Yes No
- 8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No
- 9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)?
- 10. Were correct bottle(s) used for the test(s) indicated? Yes No
- 11. Sufficient quantity received to perform indicated analyses? Yes No
- 12. Are these work share samples and all listed on the COC? Yes No
 If yes, Questions 13-17 have been checked at the originating laboratory.
- 13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC203864
- 14. Were VOAs on the COC? Yes No
- 15. Were air bubbles >6 mm in any VOA vials? ● ← Larger than this. Yes No NA
- 16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No
- 17. Was a LL Hg or Me Hg trip blank present? _____ Yes No

Preservation Codes:
 A - HCL
 B - NaOH
 C - Zn Acetate
 D - Nitric Acid
 E - NaHSO4
 F - MeOH
 G - Anchlor
 H - Ascorbic Acid
 I - Ice
 J - DI Water
 K - EDTA
 L - EDA
 Other: [Redacted]

Preservation Codes:
 M - Hexane
 N - None
 O - AsNaO2
 P - Na2O4S
 Q - Na2SO3
 R - Na2S2O3
 S - H2SO4
 T - TSP Dodecahydrate
 U - Acetone
 V - MCAA
 W - pH 4-5
 Y - Trizma
 Z - other (specify)

Special Instructions/Note:
 16

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
 Return To Client Disposal By Lab Archive For Months

Special Instructions/QC Requirements:

Client: Lightstone Generation Gavin Power LLC

Job Number: 240-183288-1

Login Number: 183288

List Number: 2

Creator: Sharkey-Gonzalez, Briana L

List Source: Eurofins St. Louis

List Creation: 04/12/23 06:53 PM

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

 **ANALYTICAL REPORT****PREPARED FOR**

Attn: Taylor Huffman
Lightstone Generation Gavin Power LLC
7397 OH-7
Cheshire, Ohio 45620

Generated 6/6/2023 9:01:46 AM Revision 1

JOB DESCRIPTION

Federal CCR Wells

JOB NUMBER

240-183575-1

Eurofins Cleveland

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Authorization

Qualifiers

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
E	Result exceeded calibration range.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.
X	Carrier is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 240-183575-1

Laboratory: Eurofins Cleveland

Narrative

Job Narrative 240-183575-1

Revised 6/06/2023 to include Calcium per client request.

Receipt

The samples were received on 4/14/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 12 coolers at receipt time were 1.1°C, 1.2°C, 1.4°C, 1.6°C, 1.8°C, 1.8°C, 2.0°C, 2.3°C, 2.6°C, 2.8°C, 3.2°C and 18.1°C

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method 300.0_28D: Sample was above the highest point of the curve for chloride. Sample is being reported for in hold results. Sample will be rerun out of hold at a dilution. BAC-14-F-20230411-01 (240-183575-5)

Method 300.0_28D: Reanalysis of the following sample was performed outside of the analytical holding time due to sample needing a higher dilution: BAC-14-F-20230411-01 (240-183575-5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter

Method 9315_Ra226: Radium-226 Prep Batch 160-609082 The following samples were prepared at a reduced aliquot due to Matrix: BAC-10-F-20230411-01 (240-183575-1), BAC-14-F-20230411-01 (240-183575-5), BAC-12-F-20230411-01 (240-183575-6) and BAC-18-F-20230412-01 (240-183575-9). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

Method 9315_Ra226: Radium-226 Prep Batch 160-609082 Insufficient sample volume was available to perform a sample duplicate for the following samples: BAC-23-F-20230411-01 (240-183575-2), DUP-005-BAC-23-F-20230411-01 (240-183575-3), BAC-08-F-20230411-01 (240-183575-4), EB-001-F-20230411-01 (240-183575-7), BAC-07-F-20230412-01 (240-183575-8) and BAC-06-F-20230412-01 (240-183575-10). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method 9315_Ra226: Radium-22 Prep Batch 160-609093 Insufficient sample volume was available to perform a sample duplicate for the following samples: DUP-006-BAC-06-F-20230412-01 (240-183575-11), BAC-16-F-20230412-01 (240-183575-12) and EB-001-F-20230412-01 (240-183575-13). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method 9315_Ra226: Radium 226 prep batch 160-609082 The barium carrier recovery is outside the lower control limit (30%) for the following sample: BAC-12-F-20230411-01 (240-183575-6). There was physical evidence of matrix interference apparent during the initial preparation of the sample. The QC samples associated with the batch have acceptable carrier recovery indicating the presence of matrix interference.

Method 9315_Ra226: Radium-226 batch 609082 The detection goal was not met for the following sample(s). Sample was prepped at a reduced volume due to the presence of matrix interferences: BAC-12-F-20230411-01 (240-183575-6). Analytical results are reported with the detection limit achieved.

Method 9315_Ra226: Radium-226 batch 609082 The lower control limit (40%) for the following sample: BAC-12-F-20230411-01 (240-183575-6). There was physical evidence of matrix interference apparent during the initial preparation of the sample. The QC samples associated with the batch have acceptable carrier recovery indicating the presence of matrix interference.

Method 9315_Ra226: Radium-226 batch 609082 Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking

Case Narrative

Client: Lightstone Generation Gavin Power LLC
Project/Site: Federal CCR Wells

Job ID: 240-183575-1

Job ID: 240-183575-1 (Continued)

Laboratory: Eurofins Cleveland (Continued)

Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-10-F-20230411-01 (240-183575-1), BAC-23-F-20230411-01 (240-183575-2), DUP-005-BAC-23-F-20230411-01 (240-183575-3), BAC-08-F-20230411-01 (240-183575-4), BAC-14-F-20230411-01 (240-183575-5), BAC-12-F-20230411-01 (240-183575-6), EB-001-F-20230411-01 (240-183575-7), BAC-07-F-20230412-01 (240-183575-8), BAC-18-F-20230412-01 (240-183575-9), BAC-06-F-20230412-01 (240-183575-10), (LCS 160-609082/2-A), (LCSD 160-609082/3-A) and (MB 160-609082/1-A)

Method 9315_Ra226: Radium-226 batch 609093 Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DUP-006-BAC-06-F-20230412-01 (240-183575-11), BAC-16-F-20230412-01 (240-183575-12), EB-001-F-20230412-01 (240-183575-13), (LCS 160-609093/2-A), (LCSD 160-609093/3-A) and (MB 160-609093/1-A)

Method 9320_Ra228: Radium-228 Prep Batch 160-609091 The following samples were prepared at a reduced aliquot due to Matrix: BAC-10-F-20230411-01 (240-183575-1), BAC-14-F-20230411-01 (240-183575-5), BAC-12-F-20230411-01 (240-183575-6) and BAC-18-F-20230412-01 (240-183575-9). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

Method 9320_Ra228: Radium-228 Prep Batch 160-609091 Insufficient sample volume was available to perform a sample duplicate for the following samples: BAC-23-F-20230411-01 (240-183575-2), DUP-005-BAC-23-F-20230411-01 (240-183575-3), BAC-08-F-20230411-01 (240-183575-4), EB-001-F-20230411-01 (240-183575-7), BAC-07-F-20230412-01 (240-183575-8) and BAC-06-F-20230412-01 (240-183575-10). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method 9320_Ra228: Radium-228 Prep Batch 160-609099 Insufficient sample volume was available to perform a sample duplicate for the following samples: DUP-006-BAC-06-F-20230412-01 (240-183575-11), BAC-16-F-20230412-01 (240-183575-12) and EB-001-F-20230412-01 (240-183575-13). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method 9320_Ra228: Radium 228 prep batch 160-609091 The barium carrier recovery is outside the lower control limit (30%) for the following sample: BAC-12-F-20230411-01 (240-183575-6). There was physical evidence of matrix interference apparent during the initial preparation of the sample. The QC samples associated with the batch have acceptable carrier recovery indicating the presence of matrix interference.

Method 9320_Ra228: Radium 228 batch 609091 The detection goal was not met for the following sample(s). Samples were prepped at a reduced volume due to the presence of matrix interferences: BAC-10-F-20230411-01 (240-183575-1), BAC-14-F-20230411-01 (240-183575-5) and BAC-12-F-20230411-01 (240-183575-6). Analytical results are reported with the detection limit achieved.

Method 9320_Ra228: Radium 228 batch 609091 The Ba Carrier recovery is outside lower control limit (40%) for the following sample: BAC-12-F-20230411-01 (240-183575-6). There was physical evidence of matrix interference apparent during the initial preparation of the sample. The QC samples associated with the batch have acceptable carrier recovery indicating the presence of matrix interference.

Method 9320_Ra228: Radium 228 batch 609091 Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-10-F-20230411-01 (240-183575-1), BAC-23-F-20230411-01 (240-183575-2), DUP-005-BAC-23-F-20230411-01 (240-183575-3), BAC-08-F-20230411-01 (240-183575-4), BAC-14-F-20230411-01 (240-183575-5), BAC-12-F-20230411-01 (240-183575-6), EB-001-F-20230411-01 (240-183575-7), BAC-07-F-20230412-01 (240-183575-8), BAC-18-F-20230412-01 (240-183575-9), BAC-06-F-20230412-01 (240-183575-10), (LCS 160-609091/2-A), (LCSD 160-609091/3-A) and (MB 160-609091/1-A)

1. Cooler temperature upon receipt See Multiple Cooler Form

IR GUN # 22 (CF +0 °C) Observed Cooler Temp. _____ °C Corrected Cooler Temp. _____ °C

2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity 1 Yes No

-Were the seals on the outside of the cooler(s) signed & dated? Yes No NA

-Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No NA

-Were tamper/custody seals intact and uncompromised? Yes No NA

3. Shippers' packing slip attached to the cooler(s)? Yes No

4. Did custody papers accompany the sample(s)? Yes No

5. Were the custody papers relinquished & signed in the appropriate place? Yes No

6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No

7. Did all bottles arrive in good condition (Unbroken)? Yes No

8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No

9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)?

10. Were correct bottle(s) used for the test(s) indicated? Yes No

11. Sufficient quantity received to perform indicated analyses? Yes No

12. Are these work share samples and all listed on the COC? Yes No

If yes, Questions 13-17 have been checked at the originating laboratory.

13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC203864

14. Were VOAs on the COC? Yes No NA

15. Were air bubbles >6 mm in any VOA vials? Yes No NA  ← Larger than this.

16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No NA

17. Was a LL Hg or Me Hg trip blank present? _____ Yes No

Packing material used: Bubble Wrap Foam Plastic Bag None Other _____

COOLANT: Wet Ice Blue Ice Dry Ice Water None

1. Cooler temperature upon receipt See Multiple Cooler Form

IR GUN # 22 (CF +0 °C) Observed Cooler Temp. _____ °C Corrected Cooler Temp. _____ °C

- 2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity 1 Yes No
-Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
-Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No NA
-Were tamper/custody seals intact and uncompromised? Yes No NA
- 3. Shippers' packing slip attached to the cooler(s)? Yes No
- 4. Did custody papers accompany the sample(s)? Yes No
- 5. Were the custody papers relinquished & signed in the appropriate place? Yes No
- 6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
- 7. Did all bottles arrive in good condition (Unbroken)? Yes No
- 8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No
- 9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)? Yes No
- 10. Were correct bottle(s) used for the test(s) indicated? Yes No
- 11. Sufficient quantity received to perform indicated analyses? Yes No
- 12. Are these work share samples and all listed on the COC? Yes No
If yes, Questions 13-17 have been checked at the originating laboratory.
- 13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC203864
- 14. Were VOAs on the COC? Yes No NA
- 15. Were air bubbles >6 mm in any VOA vials? Yes No NA  ← Larger than this.
- 16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No NA
- 17. Was a LL Hg or Me Hg trip blank present? _____ Yes No

Tests that are not checked for pH by Receiving:

VOAs
Oil and Grease

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing North Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing North Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing North Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing North Central, LLC.

List Creation: 04/18/23 01:40 PM

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

240-192599-1

Eurofins Cleveland

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Qualifiers

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
^2	Calibration Blank (ICB and/or CCB) is outside acceptance limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.
X	Carrier is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Job ID: 240-192599-1

Laboratory: Eurofins Cleveland

Narrative

Job Narrative 240-192599-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method. Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 9/30/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 0.1°C, 0.8°C, 1.1°C, 2.0°C, 3.7°C, 14.4°C and 21.3°C

Metals

Method 6020B: The continuing calibration verification (CCV) associated with batch 240-589577 recovered above the upper control limit for Lithium. The samples associated with this CCV were below the reporting limits for the affected analytes; therefore, the data have been reported. The associated samples are impacted: BAC-10-F-20230926-01 (240-192599-1), BAC-06-F-20230927-01 (240-192599-3) and MW-1-F-20230928-01 (240-192599-10).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method 300.0_28D: The following sample was diluted due to the nature of the sample matrix: BAC-11-F-20230927-01 (240-192599-6). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter

Method 9315_Ra226: Radium 226 prep batch 160-630672

The barium carrier recovery is outside the upper control limit (110%) for the following sample: BAC-11-F-20230927-01 (240-192599-6). There was physical evidence of matrix interference apparent during the initial preparation of the sample. The QC samples associated with the batch have acceptable carrier recovery indicating the presence of matrix interference.

Method 9315_Ra226: Radium 226 batch 630672

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

BAC-10-F-20230926-01 (240-192599-1), BAC-07-F-20230927-01 (240-192599-2), BAC-06-F-20230927-01 (240-192599-3), BAC-19-F-20230927-01 (240-192599-4), BAC-18-F-20230927-01 (240-192599-5), BAC-02-F-20230927-01 (240-192599-7), DUP-005-F-20230927-01 (240-192599-8), EB-001-F-20230927-01 (240-192599-9), MW-1-F-20230928-01 (240-192599-10), MW-1-F-20230928-01 (240-192599-10[MS]), MW-1-F-20230928-01 (240-192599-10[MSD]), BAC-21-F-20230928-01 (240-192599-11), BAC-22-F-20230928-01 (240-192599-12), BAC-23-F-20230928-01 (240-192599-13), BAC-08-F-20230928-01 (240-192599-14), EB-001-F-20230928-01 (240-192599-15), (LCS 160-630672/2-A) and (MB 160-630672/1-A)

Method 9315_Ra226: Radium 226 batch 630672

The following sample has a barium carrier recovery above the 110% QC limit. Affected samples had a barium correction applied, however, there is significant concentrations of salt-like compounds (i.e. calcium, magnesium, sodium, and strontium) that can interfere with a

Case Narrative

Job ID: 240-192599-1 (Continued)

Laboratory: Eurofins Cleveland (Continued)

barium sulfate recovery. The LCS (laboratory control sample) has an acceptable spike recovery demonstrating acceptable sample preparation and instrument performance. The samples have been truncated to 100% to reduce any potential bias a high carrier recovery may have. The data have been qualified and reported.

BAC-11-F-20230927-01 (240-192599-6)

Method 9320_Ra228: Radium 228 prep batch 106-630677

The barium carrier recovery is outside the upper control limit (110%) for the following sample: BAC-11-F-20230927-01 (240-192599-6). There was physical evidence of matrix interference apparent during the initial preparation of the sample. The QC samples associated with the batch have acceptable carrier recovery indicating the presence of matrix interference.

Method 9320_Ra228: Radium-228 batch 630677

The following sample has a barium carrier recovery above the 110% QC limit. Affected samples had a barium correction applied, however, there is significant concentrations of salt-like compounds (i.e. calcium, magnesium, sodium, and strontium) that can interfere with a barium sulfate recovery. The LCS (laboratory control sample) has an acceptable spike recovery demonstrating acceptable sample preparation and instrument performance. The samples have been truncated to 100% to reduce any potential bias a high carrier recovery may have. The data have been qualified and reported.

BAC-11-F-20230927-01 (240-192599-6)

Method 9320_Ra228: Radium-228 batch 630677

The detection goal was not met for the following sample(s). Samples were prepped at a reduced volume due to the presence of matrix interferences: BAC-02-F-20230927-01 (240-192599-7), DUP-005-F-20230927-01 (240-192599-8) and BAC-21-F-20230928-01 (240-192599-11). Analytical results are reported with the detection limit achieved.

Method 9320_Ra228: Radium-228 batch 630677

Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date.

BAC-10-F-20230926-01 (240-192599-1), BAC-07-F-20230927-01 (240-192599-2), BAC-06-F-20230927-01 (240-192599-3), BAC-19-F-20230927-01 (240-192599-4), BAC-18-F-20230927-01 (240-192599-5), BAC-11-F-20230927-01 (240-192599-6), BAC-02-F-20230927-01 (240-192599-7), DUP-005-F-20230927-01 (240-192599-8), EB-001-F-20230927-01 (240-192599-9), MW-1-F-20230928-01 (240-192599-10), MW-1-F-20230928-01 (240-192599-10[MS]), MW-1-F-20230928-01 (240-192599-10[MSD]), BAC-21-F-20230928-01 (240-192599-11), BAC-22-F-20230928-01 (240-192599-12), BAC-23-F-20230928-01 (240-192599-13), BAC-08-F-20230928-01 (240-192599-14), EB-001-F-20230928-01 (240-192599-15), (LCS 160-630677/2-A) and (MB 160-630677/1-A)

Eurofins – Cleveland Sample Receipt Form/Narrative
Barberton Facility

Client Light Stone Site Name _____ Cooler unpacked by: Nancy Boyer
Cooler Received on 9-30-23 Opened on 9-30-23
FedEx: 1st Grd Exp Waypoint Client Drop Off Eurofins Courier Other _____
Receipt After-hours: Drop-off Date/Time _____ **Storage Location** _____

Eurofins Cooler # EC Foam Box Client Cooler Box Other _____
Packing material used: Bubble Wrap Foam Plastic Bag None Other _____
COOLANT: Wet Ice Blue Ice Dry Ice Water ~~None~~

1. Cooler temperature upon receipt See Multiple Cooler Form
IR GUN # 22 (CF -0.1 °C) Observed Cooler Temp. _____ °C Corrected Cooler Temp. _____ °C

2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity leach Yes No
-Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
-Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No
-Were tamper/custody seals intact and uncompromised? Yes No NA

3. Shippers' packing slip attached to the cooler(s)? Yes No
4. Did custody papers accompany the sample(s)? Yes No
5. Were the custody papers relinquished & signed in the appropriate place? Yes No
6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
7. Did all bottles arrive in good condition (Unbroken)? Yes No
8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No
9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)? Yes No
10. Were correct bottle(s) used for the test(s) indicated? Yes No
11. Sufficient quantity received to perform indicated analyses? Yes No
12. Are these work share samples and all listed on the COC? Yes No

If yes, Questions 13-17 have been checked at the originating laboratory.

13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC312501
14. Were VOAs on the COC? Yes No
15. Were air bubbles >6 mm in any VOA vials?  Larger than this. Yes No NA
16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No
17. Was a LL Hg or Me Hg trip blank present? Yes No

Tests that are not checked for pH by Receiving:

VOAs
Oil and Grease
TOC

Contacted PM _____ Date _____ by _____ via Verbal Voice Mail Other _____
Concerning _____

18. CHAIN OF CUSTODY & SAMPLE DISCREPANCIES additional next page Samples processed by: _____

19. SAMPLE CONDITION

Sample(s) _____ were received after the recommended holding time had expired.
Sample(s) _____ were received in a broken container.
Sample(s) _____ were received with bubble >6 mm in diameter. (Notify PM)

20. SAMPLE PRESERVATION

Sample(s) _____ were further preserved in the laboratory.
Time preserved: _____ Preservative(s) added/Lot number(s): _____

VOA Sample Preservation - Date/Time VOAs Frozen: _____

Temperature readings:

1. Cooler temperature upon receipt See Multiple Cooler Form

IR GUN # 22 (CF -0.1 °C) Observed Cooler Temp. _____ °C Corrected Cooler Temp. _____ °C

- 2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity leach Yes No NA
 - Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
 - Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No NA
 - Were tamper/custody seals intact and uncompromised? Yes No NA

Tests that are not checked for pH by Receiving:

VOAs
Oil and Grease
TOC

- 3. Shippers' packing slip attached to the cooler(s)? Yes No
- 4. Did custody papers accompany the sample(s)? Yes No
- 5. Were the custody papers relinquished & signed in the appropriate place? Yes No
- 6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
- 7. Did all bottles arrive in good condition (Unbroken)? Yes No
- 8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No
- 9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)? Yes No
- 10. Were correct bottle(s) used for the test(s) indicated? Yes No
- 11. Sufficient quantity received to perform indicated analyses? Yes No
- 12. Are these work share samples and all listed on the COC? Yes No
- If yes, Questions 13-17 have been checked at the originating laboratory.
- 13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC312501
- 14. Were VOAs on the COC? Yes No NA
- 15. Were air bubbles >6 mm in any VOA vials? Yes No NA ● ← Larger than this.
- 16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No NA
- 17. Was a LL Hg or Me Hg trip blank present? _____ Yes No

- 2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity leach Yes No
 - Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
 - Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No
 - Were tamper/custody seals intact and uncompromised? Yes No NA
- 3. Shippers' packing slip attached to the cooler(s)? Yes No
- 4. Did custody papers accompany the sample(s)? Yes No
- 5. Were the custody papers relinquished & signed in the appropriate place? Yes No
- 6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
- 7. Did all bottles arrive in good condition (Unbroken)? Yes No
- 8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No
- 9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)? Yes No
- 10. Were correct bottle(s) used for the test(s) indicated? Yes No
- 11. Sufficient quantity received to perform indicated analyses? Yes No
- 12. Are these work share samples and all listed on the COC? Yes No
If yes, Questions 13-17 have been checked at the originating laboratory.
- 13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC312501
- 14. Were VOAs on the COC? Yes No
- 15. Were air bubbles >6 mm in any VOA vials? Yes No NA **← Larger than this.**
- 16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No
- 17. Was a LL Hg or Me Hg trip blank present? _____ Yes No

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing North Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix, being analyzed, the samples must be shipped back to the Eurofins Environment Testing North Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing North Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing North Central, LLC

Possible Hazard Identification
 Unconfirmed
 Deliverable Requested: I, II, III, IV, Other (specify) _____
 Primary Deliverable Rank: 2

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
 Return To Client Disposal By Lab Archive For _____ Months
 Special Instructions/QC Requirements:

Empty Kit Relinquished by: _____ Date: _____ Method of Shipment: _____
 Relinquished by: *Rochelle H. Cooper* Date/Time: *10/23/23 9:30* Company: *EBTAC*
 Relinquished by: *Fedex* Date/Time: *10/23/2023 08:30* Company: _____

List Source: Eurofins St. Louis

List Creation: 10/03/23 12:29 PM

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

 **ANALYTICAL REPORT****PREPARED FOR**

Attn: Taylor Huffman
Lightstone Generation Gavin Power LLC
7397 OH-7

Cheshire, Ohio 45620

Generated 11/7/2023 10:16:53 AM

JOB DESCRIPTION

Federal CCR Wells

JOB NUMBER

240-192754-1

Eurofins Cleveland

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job ID: 240-192754-1

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
E	Result exceeded calibration range.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 240-192754-1

Job ID: 240-192754-1

Laboratory: Eurofins Cleveland

Narrative

Job Narrative 240-192754-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method. Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 10/4/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.1°C, 0.7°C, 0.7°C and 12.4°C

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method 300.0_28D: Reanalysis of the following sample(s) was performed outside of the analytical holding time due to failure of quality control parameters in the initial analysis. BAC-12-F-20230929-01 (240-192754-2)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter

Method 9315_Ra226: Radium-226 prep batch 160-630991: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-14-F-20230929-01 (240-192754-1), BAC-12-F-20230929-01 (240-192754-2), MW-6-F-20230929-01 (240-192754-3), FIELD BLANK-001-F-20230929-01 (240-192754-4), BAC-16-F-20231002-01 (240-192754-5), DUP-006-F-20231002-01 (240-192754-6), BAC-17-F-20231002-01 (240-192754-7), BAC-01-F-20231002-01 (240-192754-8), BAC-09-F-20231002-01 (240-192754-9), BAC-03-F-2023100-01 (240-192754-10), FIELD BLANK-001-F-20231002-01 (240-192754-11), (LCS 160-630991/2-A), (MB 160-630991/1-A)

Method 9320_Ra228: Radium-228 batch 630993: The detection goal was not met for the following sample(s). Sample was prepped at a reduced volume due to the presence of matrix interferences: BAC-09-F-20231002-01 (240-192754-9). Analytical results are reported with the detection limit achieved.

Method 9320_Ra228: Radium-228 batch 630993: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-14-F-20230929-01 (240-192754-1), BAC-12-F-20230929-01 (240-192754-2), MW-6-F-20230929-01 (240-192754-3), FIELD BLANK-001-F-20230929-01 (240-192754-4), BAC-16-F-20231002-01 (240-192754-5), DUP-006-F-20231002-01 (240-192754-6), BAC-17-F-20231002-01 (240-192754-7), BAC-01-F-20231002-01 (240-192754-8), BAC-09-F-20231002-01 (240-192754-9), BAC-03-F-2023100-01 (240-192754-10), FIELD BLANK-001-F-20231002-01 (240-192754-11), (LCS 160-630993/2-A), (MB 160-630993/1-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Eurofins Cooler # FL FL Foam Box Client Cooler Box Other _____
 Packing material used: Bubble Wrap Foam Plastic Bag None Other _____
 COOLANT: Wet Ice Blue Ice Dry Ice Water None

1. Cooler temperature upon receipt See Multiple Cooler Form
 IR GUN # 22 (CF -0.1 °C) Observed Cooler Temp. _____ °C Corrected Cooler Temp. _____ °C

2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity leach Yes No
 -Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
 -Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No
 -Were tamper/custody seals intact and uncompromised? Yes No NA

3. Shippers' packing slip attached to the cooler(s)? Yes No
 4. Did custody papers accompany the sample(s)? Yes No
 5. Were the custody papers relinquished & signed in the appropriate place? Yes No
 6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
 7. Did all bottles arrive in good condition (Unbroken)? Yes No
 8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? TR-10-4-23 Yes No
 9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)? Yes No
 10. Were correct bottle(s) used for the test(s) indicated? Yes No
 11. Sufficient quantity received to perform indicated analyses? Yes No
 12. Are these work share samples and all listed on the COC? Yes No
 If yes, Questions 13-17 have been checked at the originating laboratory.

13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC312501
 14. Were VOAs on the COC? Yes No
 15. Were air bubbles >6 mm in any VOA vials? Yes ← Larger than this. Yes No NA
 16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No
 17. Was a LL Hg or Me Hg trip blank present? Yes No

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing North Central, LLC places the ownership of method, analysis & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing North Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing North Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing North Central, LLC.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

ANALYTICAL REPORT

PREPARED FOR

Attn: Taylor Huffman
Lightstone Generation Gavin Power LLC

Cheshire, Ohio 45620
Generated 11/7/2023 5:36:57 PM

JOB DESCRIPTION

Federal CCR Wells

JOB NUMBER

240-192977-1

Eurofins Cleveland

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Job ID: 240-192977-1

Laboratory: Eurofins Cleveland

Narrative

Job Narrative 240-192977-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method. Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 10/5/2023 4:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.6°C and 3.2°C

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter

Method 9320_Ra228: Radium-228 batch 631369: The detection goal was not met for the following sample(s). Sample was prepped at a reduced volume due to the presence of matrix interferences: BAC-15-F-20231003-01 (240-192977-1). Analytical results are reported with the detection limit achieved.

Method 9320_Ra228: Radium-228 batch 631369: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-15-F-20231003-01 (240-192977-1), FIELD BLANK-001-F-20231003-01 (240-192977-2), BAC-05-F-20231003-01 (240-192977-3), BAC-04-F-20231003-01 (240-192977-4), BAC-13-F-20231003-01 (240-192977-5), DUP-007-F-20231003-01 (240-192977-6), FIELD BLANK-002-F-20231003-01 (240-192977-7), (LCS 160-631369/2-A), (MB 160-631369/1-A) and (240-192977-F-2-B DU)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

1. Cooler temperature upon receipt See Multiple Cooler Form
IR GUN # 13 (CF +0.4 °C) Observed Cooler Temp. _____ °C Corrected Cooler Temp. _____ °C

2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity _____ Yes No
-Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
-Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No
-Were tamper/custody seals intact and uncompromised? Yes No NA

3. Shippers' packing slip attached to the cooler(s)? Yes No
4. Did custody papers accompany the sample(s)? Yes No
5. Were the custody papers relinquished & signed in the appropriate place? Yes No
6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
7. Did all bottles arrive in good condition (Unbroken)? Yes No
8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No
9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)? Yes No
10. Were correct bottle(s) used for the test(s) indicated? Yes No
11. Sufficient quantity received to perform indicated analyses? Yes No
12. Are these work share samples and all listed on the COC? Yes No
If yes, Questions 13-17 have been checked at the originating laboratory.

13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC316719
14. Were VOAs on the COC? Yes No
15. Were air bubbles >6 mm in any VOA vials?  Larger than this. Yes No NA
16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No
17. Was a LL Hg or Me Hg trip blank present? Yes No

Contacted PM _____ Date _____ by _____ via Verbal Voice Mail Other _____

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing North Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing North Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing North Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing North Central, LLC.

Login Sample Receipt Checklist

Client: Lightstone Generation Gavin Power LLC

Job Number: 240-192977-1

Login Number: 192977

List Number: 2

Creator: Pinette, Meadow L

List Source: Eurofins St. Louis

List Creation: 10/09/23 01:16 PM

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

JOB DESCRIPTION

Federal CCR Wells - App III

JOB NUMBER

240-181022-1

Eurofins Canton

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Qualifiers

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
240-181022-1

Receipt

The samples were received on 2/27/2023 1:20 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.7°C

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity each Yes No
 -Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
 -Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No
 -Were tamper/custody seals intact and uncompromised? Yes No NA

3. Shippers' packing slip attached to the cooler(s)? Yes No

4. Did custody papers accompany the sample(s)? Yes No

5. Were the custody papers relinquished & signed in the appropriate place? Yes No

6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No

7. Did all bottles arrive in good condition (Unbroken)? Yes No

8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No

9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)? Yes No

10. Were correct bottle(s) used for the test(s) indicated? Yes No

11. Sufficient quantity received to perform indicated analyses? Yes No

12. Are these work share samples and all listed on the COC? Yes No
 If yes, Questions 13-17 have been checked at the originating laboratory.

13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC203864

14. Were VOAs on the COC? Yes No

15. Were air bubbles >6 mm in any VOA vials? Yes ← Larger than this. Yes No NA

16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No

17. Was a LL Hg or Me Hg trip blank present? Yes No

 - Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity each Yes No
 -Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
 -Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No
 -Were tamper/custody seals intact and uncompromised? Yes No NA
 - Shippers' packing slip attached to the cooler(s)? Yes No
 - Did custody papers accompany the sample(s)? Yes No
 - Were the custody papers relinquished & signed in the appropriate place? Yes No
 - Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
 - Did all bottles arrive in good condition (Unbroken)? Yes No
 - Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No
 - For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)? Yes No
 - Were correct bottle(s) used for the test(s) indicated? Yes No
 - Sufficient quantity received to perform indicated analyses? Yes No
 - Are these work share samples and all listed on the COC? Yes No
- If yes, Questions 13-17 have been checked at the originating laboratory.
- Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC203864
 - Were VOAs on the COC? Yes No
 - Were air bubbles >6 mm in any VOA vials?  ← Larger than this. Yes No NA
 - Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No
 - Was a LL Hg or Me Hg trip blank present? Yes No

ANALYTICAL REPORT

PREPARED FOR

Attn: Taylor Huffman
Lightstone Generation Gavin Power LLC
7397 OH-7
Cheshire, Ohio 45620
Generated 3/30/2023 3:21:48 PM

JOB DESCRIPTION

Federal CCR Wells - App IV

JOB NUMBER

240-181023-1

Eurofins Canton

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job ID: 240-181023-1

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Lightstone Generation Gavin Power LLC
Project/Site: Federal CCR Wells - App IV

Job ID: 240-181023-1

Laboratory: Eurofins Canton

Narrative

Job Narrative 240-181023-1

Receipt

The samples were received on 2/27/2023 1:20 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.9°C

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Gas Flow Proportional Counter

Method 9315_Ra226: Radium-226 batch 602324: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. MW-1-F-20230224-01 (240-181023-1), BAC-21-F-20230224-01 (240-181023-2), BAC-22-F-20230224-01 (240-181023-3), EB-001-F-20230224-01 (240-181023-4), (LCS 160-602324/2-A), (MB 160-602324/1-A)

Method 9320_Ra228: Radium-228 batch 602331: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. MW-1-F-20230224-01 (240-181023-1), BAC-21-F-20230224-01 (240-181023-2), BAC-22-F-20230224-01 (240-181023-3), EB-001-F-20230224-01 (240-181023-4), (LCS 160-602331/2-A), (MB 160-602331/1-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Rad

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity each Yes No
 -Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
 -Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No NA
 -Were tamper/custody seals intact and uncompromised? Yes No NA
3. Shippers' packing slip attached to the cooler(s)? Yes No
4. Did custody papers accompany the sample(s)? Yes No
5. Were the custody papers relinquished & signed in the appropriate place? Yes No
6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
7. Did all bottles arrive in good condition (Unbroken)? Yes No
8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No
9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)? Yes No
10. Were correct bottle(s) used for the test(s) indicated? Yes No
11. Sufficient quantity received to perform indicated analyses? Yes No
12. Are these work share samples and all listed on the COC? Yes No
 If yes, Questions 13-17 have been checked at the originating laboratory.
13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC203864
14. Were VOAs on the COC? Yes No
15. Were air bubbles >6 mm in any VOA vials? Yes No NA  ← Larger than this.
16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No
17. Was a LL Hg or Me Hg trip blank present? _____ Yes No

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

 **ANALYTICAL REPORT****PREPARED FOR**

Attn: Taylor Huffman
Lightstone Generation Gavin Power LLC

JOB DESCRIPTION

Federal CCR Wells - App III

JOB NUMBER

240-181143-1

Eurofins Canton

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job ID: 240-181143-1

Qualifiers

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Lightstone Generation Gavin Power LLC
Project/Site: Federal CCR Wells - App III

Job ID: 240-181143-1

Job ID: 240-181143-1

Laboratory: Eurofins Canton

Narrative

Job Narrative
240-181143-1

Receipt

The samples were received on 3/1/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.2°C, 1.1°C, 2.3°C and 13.6°C

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity _____ Yes No
-Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
-Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No
-Were tamper/custody seals intact and uncompromised? Yes No NA

Tests that are not checked for pH by Receiving:
VOAs
Oil and Grease
TOC

3. Shippers' packing slip attached to the cooler(s)? Yes No
4. Did custody papers accompany the sample(s)? Yes No
5. Were the custody papers relinquished & signed in the appropriate place? Yes No
6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
7. Did all bottles arrive in good condition (Unbroken)? Yes No
8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No
9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)?
10. Were correct bottle(s) used for the test(s) indicated? Yes No
11. Sufficient quantity received to perform indicated analyses? Yes No
12. Are these work share samples and all listed on the COC? Yes No
If yes, Questions 13-17 have been checked at the originating laboratory.
13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC203864
14. Were VOAs on the COC? Yes No
15. Were air bubbles >6 mm in any VOA vials? Larger than this. Yes No NA
16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No
17. Was a LL Hg or Me Hg trip blank present? Yes No

ANALYTICAL REPORT

PREPARED FOR

Attn: Taylor Huffman
Lightstone Generation Gavin Power LLC
7397 OH-7
Cheshire, Ohio 45620
Generated 4/3/2023 5:17:53 PM

JOB DESCRIPTION

Federal CCR Wells - App IV

JOB NUMBER

240-181146-1

Eurofins Canton

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job ID: 240-181146-1

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Rad

Qualifier	Qualifier Description
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

No additional comments.

Receipt

The samples were received on 3/1/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.2° C, 1.1° C, 2.3° C and 13.6° C.

RAD

Methods 9315: Radium-226 batch 602806: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-16-F-20230227-01 (240-181146-1), DUP-002-BAC-16-F-20230227-01 (240-181146-2), (LCS 160-602806/2-A), (MB 160-602806/1-A)

Methods 9315: Prep batch 160-603170: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-14-F-20230227-01 (240-181146-3), BAC-12-F-20230227-01 (240-181146-4), BAC-10-F-20230227-01 (240-181146-5), (LCS 160-603170/2-A), (LCSD 160-603170/3-A) and (MB 160-603170/1-A)

Methods 9315: Prep batch 160-602810: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. EB-001-F-20230227-01 (240-181146-6), (LCS 160-602810/2-A), (LCSD 160-602810/3-A) and (MB 160-602810/1-A)

Methods 9320: Radium-228 batch 602808: The detection goal was not met for the following sample(s). Samples were prepped at a reduced volume due to the presence of matrix interferences: BAC-16-F-20230227-01 (240-181146-1) and DUP-002-BAC-16-F-20230227-01 (240-181146-2). Analytical results are reported with the detection limit achieved.

Methods 9320: Radium-228 batch 602808: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-16-F-20230227-01 (240-181146-1), DUP-002-BAC-16-F-20230227-01 (240-181146-2), (LCS 160-602808/2-A), (MB 160-602808/1-A)

Methods 9320: Radium-228 batch 602812: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. EB-001-F-20230227-01 (240-181146-6), (LCS 160-602812/2-A), (LCSD 160-602812/3-A) and (MB 160-602812/1-A)

Methods 9320: Radium-228 batch 603171: The LCS recovered at (127%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not from this agency and are therefore held to our in-house statistical limits of (62-148%) per method requirements. The LCS passes, no further action is required. (LCSD 160-603171/3-A)

Methods 9320: Radium-228 batch 603171: The detection goal was not met for the following sample(s). Samples were prepped at a reduced volume due to the presence of matrix interferences: BAC-14-F-20230227-01 (240-181146-3), BAC-12-F-20230227-01 (240-181146-4) and BAC-10-F-20230227-01 (240-181146-5). Analytical results are reported with the detection limit achieved.

Methods 9320: Radium-228 batch 603171: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-14-F-20230227-01 (240-181146-3), BAC-12-F-20230227-01 (240-181146-4), BAC-10-F-20230227-01 (240-181146-5), (LCS 160-603171/2-A), (LCSD 160-603171/3-A) and (MB 160-603171/1-A)

Method PrecSep_0: Radium-228 Prep Batch 160-602812: The following samples were prepared at a reduced aliquot due to Matrix:

- 2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity _____ Yes No
 - Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
 - Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No
 - Were tamper/custody seals intact and uncompromised? Yes No NA

Tests that are not checked for pH by Receiving:

VOAs
Oil and Grease
TOC

- 3. Shippers' packing slip attached to the cooler(s)? Yes No
- 4. Did custody papers accompany the sample(s)? Yes No
- 5. Were the custody papers relinquished & signed in the appropriate place? Yes No
- 6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
- 7. Did all bottles arrive in good condition (Unbroken)? Yes No
- 8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No
- 9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)?
- 10. Were correct bottle(s) used for the test(s) indicated? Yes No
- 11. Sufficient quantity received to perform indicated analyses? Yes No
- 12. Are these work share samples and all listed on the COC? Yes No

If yes, Questions 13-17 have been checked at the originating laboratory.

- 13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC203864
- 14. Were VOAs on the COC? Yes No
- 15. Were air bubbles >6 mm in any VOA vials? Yes Larger than this. Yes No NA
- 16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No
- 17. Was a LL Hg or Me Hg trip blank present? Yes No

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

240-181275-1

Eurofins Canton

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Qualifiers

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments

No additional comments.

Receipt

The samples were received on 3/3/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 1.7° C, 2.3° C, 2.5° C, 2.7° C and 14.5° C.

RAD

Methods 9315: Radium-226 batch 602828: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-01-F-20230301-01 (240-181275-1), MW-6-F-20230301-01 (240-181275-2), BAC-23-F-20230301-01 (240-181275-3), BAC-08-F-20230301-01 (240-181275-4), EB-001-F-20230301-01 (240-181275-5), (LCS 160-602828/2-A), (LCSD 160-602828/3-A) and (MB 160-602828/1-A)

Methods 9320: Radium-228 batch 602829: The LCS recovered at (139%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not from this agency and are therefore held to our in-house statistical limits of (62-148%) per method requirements. The LCS passes, no further action is required. (LCSD 160-602829/3-A)

Methods 9320: Radium-228 batch 602829: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-01-F-20230301-01 (240-181275-1), MW-6-F-20230301-01 (240-181275-2), BAC-23-F-20230301-01 (240-181275-3), BAC-08-F-20230301-01 (240-181275-4), EB-001-F-20230301-01 (240-181275-5), (LCS 160-602829/2-A), (LCSD 160-602829/3-A) and (MB 160-602829/1-A)

Method PrecSep_0: Radium-228 Prep Batch 602829: The following sample was prepared at a reduced aliquot due to Matrix: BAC-01-F-20230301-01 (240-181275-1). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

Method PrecSep_0: Radium-228 Prep Batch 602829: Insufficient sample volume was available to perform a sample duplicate for the following samples: MW-6-F-20230301-01 (240-181275-2), BAC-23-F-20230301-01 (240-181275-3), BAC-08-F-20230301-01 (240-181275-4) and EB-001-F-20230301-01 (240-181275-5). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method PrecSep-21: Radium-226 Prep Batch 160-602828: The following sample was prepared at a reduced aliquot due to Matrix: BAC-01-F-20230301-01 (240-181275-1). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead of a sample duplicate (DUP) to demonstrate batch precision.

Method PrecSep-21: Radium-226 Prep Batch 160-602828: Insufficient sample volume was available to perform a sample duplicate for the following samples: MW-6-F-20230301-01 (240-181275-2), BAC-23-F-20230301-01 (240-181275-3), BAC-08-F-20230301-01 (240-181275-4) and EB-001-F-20230301-01 (240-181275-5). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6020B: The continuing calibration verification (CCV) associated with batch 240-564732 recovered above the upper control limit for Beryllium. The samples associated with this CCV were below the reporting limit for the affected analyte; therefore, the data have been reported. The associated samples are impacted: BAC-01-F-20230301-01 (240-181275-1), MW-6-F-20230301-01 (240-181275-2), BAC-23-F-20230301-01 (240-181275-3), BAC-08-F-20230301-01 (240-181275-4) and EB-001-F-20230301-01 (240-181275-5).

Method 6020B: The continuing calibration verification (CCV) associated with batch 240-564732 recovered above the upper control limit for

- 2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity 1
 - Were the seals on the outside of the cooler(s) signed & dated? Yes No
 - Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No NA
 - Were tamper/custody seals intact and uncompromised? Yes No NA

- 3. Shippers' packing slip attached to the cooler(s)? Yes No
- 4. Did custody papers accompany the sample(s)? Yes No
- 5. Were the custody papers relinquished & signed in the appropriate place? Yes No
- 6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
- 7. Did all bottles arrive in good condition (Unbroken)? Yes No
- 8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No
- 9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)?
- 10. Were correct bottle(s) used for the test(s) indicated? Yes No
- 11. Sufficient quantity received to perform indicated analyses? Yes No
- 12. Are these work share samples and all listed on the COC? Yes No

If yes, Questions 13-17 have been checked at the originating laboratory.

- 13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC293086
- 14. Were VOAs on the COC? Yes No
- 15. Were air bubbles >6 mm in any VOA vials? Yes No NA  ← Larger than this.
- 16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No
- 17. Was a LL Hg or Me Hg trip blank present? _____ Yes No

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is $<6\text{mm}$ (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Eurofins Canton

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Lightstone Generation Gavin Power LLC
Project/Site: Federal CCR Wells - App III

Job ID: 240-181277-1

Job ID: 240-181277-1

Laboratory: Eurofins Canton

Narrative

Job Narrative
240-181277-1

Receipt

The samples were received on 3/3/2023 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice.

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

2. Were tamper/custody seals on the outside of the cooler(s)? If Yes Quantity 1 Yes No
 -Were the seals on the outside of the cooler(s) signed & dated? Yes No NA
 -Were tamper/custody seals on the bottle(s) or bottle kits (LLHg/MeHg)? Yes No
 -Were tamper/custody seals intact and uncompromised? Yes No NA

3. Shippers' packing slip attached to the cooler(s)? Yes No
 4. Did custody papers accompany the sample(s)? Yes No
 5. Were the custody papers relinquished & signed in the appropriate place? Yes No
 6. Was/were the person(s) who collected the samples clearly identified on the COC? Yes No
 7. Did all bottles arrive in good condition (Unbroken)? Yes No
 8. Could all bottle labels (ID/Date/Time) be reconciled with the COC? Yes No
 9. For each sample, does the COC specify preservatives (Y/N), # of containers (Y/N), and sample type of grab/comp (Y/N)?
 10. Were correct bottle(s) used for the test(s) indicated? Yes No
 11. Sufficient quantity received to perform indicated analyses? Yes No
 12. Are these work share samples and all listed on the COC? Yes No

If yes, Questions 13-17 have been checked at the originating laboratory.
 13. Were all preserved sample(s) at the correct pH upon receipt? Yes No NA pH Strip Lot# HC293086
 14. Were VOAs on the COC? Yes No
 15. Were air bubbles >6 mm in any VOA vials? Yes No NA  ← Larger than this.
 16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # _____ Yes No
 17. Was a LL Hg or Me Hg trip blank present? _____ Yes No

ANALYTICAL REPORT

PREPARED FOR

Attn: Taylor Huffman
Lightstone Generation Gavin Power LLC
7397 OH-7
Cheshire, Ohio 45620
Generated 4/5/2023 2:09:36 PM

JOB DESCRIPTION

Federal CCR Wells - App IV

JOB NUMBER

240-181314-1

Eurofins Canton

Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job ID: 240-181314-1

Qualifiers

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Rad

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
G	The Sample MDC is greater than the requested RL.
U	Result is less than the sample detection limit.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments

No additional comments.

Receipt

The samples were received on 3/3/2023 2:35 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 0.4° C, 1.0° C and 2.3° C.

RAD

Methods 9315: Radium-226 prep batch 160-602832: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DUP-003-BAC-07-F-20230302-01 (240-181314-2), BAC-18-F-20230302-01 (240-181314-4), BAC-06-F-20230302-01 (240-181314-5), BAC-04-F-20230302-01 (240-181314-7), EB-001-F-20230302-01 (240-181314-8), (LCS 160-602832/2-A), (LCSD 160-602832/25-A) and (MB 160-602832/1-A)

Methods 9315: Radium-226 batch 602828: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-07-F-20230302-01 (240-181314-1), (LCS 160-602828/2-A), (LCSD 160-602828/3-A) and (MB 160-602828/1-A)

Methods 9315: Radium-226 batch 603346: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-02-F-20230302-01 (240-181314-3), BAC-05-F-20230302-01 (240-181314-6), BAC-05-F-20230302-01 (240-181314-6[MS]), BAC-05-F-20230302-01 (240-181314-6[MSD]), (LCS 160-603346/2-A), (LCSD 160-603346/3-A) and (MB 160-603346/1-A)

Methods 9320: Radium-228 batch 602829: The LCS recovered at (139%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not from this agency and are therefore held to our in-house statistical limits of (62-148%) per method requirements. The LCS passes, no further action is required. (LCSD 160-602829/3-A)

Methods 9320: Radium-228 batch 602829: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-07-F-20230302-01 (240-181314-1), (LCS 160-602829/2-A), (LCSD 160-602829/3-A) and (MB 160-602829/1-A)

Methods 9320: Radium-228 batch 602838: The LCS/LCSD recovered at (143% / 130%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS/LCSD are not from this agency and are therefore held to our in-house statistical limits of (62-148%) per method requirements. The LCS/LCSD pass, no further action is required. (LCS 160-602838/2-A) and (LCSD 160-602838/25-A)

Method 9320: Radium-228 batch 602838: The detection goal was not met for the following sample(s). Samples were prepped at a reduced volume due to the presence of matrix interferences: BAC-18-F-20230302-01 (240-181314-4) and BAC-04-F-20230302-01 (240-181314-7). Analytical results are reported with the detection limit achieved.

Methods 9320: Radium-228 batch 602838: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. DUP-003-BAC-07-F-20230302-01 (240-181314-2), BAC-18-F-20230302-01 (240-181314-4), BAC-06-F-20230302-01 (240-181314-5), BAC-04-F-20230302-01 (240-181314-7), EB-001-F-20230302-01 (240-181314-8), (LCS 160-602838/2-A), (LCSD 160-602838/25-A) and (MB 160-602838/1-A)

Methods 9320: Radium-228 batch 603347: The LCS recovered at (132%). The limits in our LIMS system at 75-125 reflect the requirements of a regulatory agency that represents a large amount of our work. However the samples associated with this LCS are not

from this agency and are therefore held to our in-house statistical limits of (62-148%) per method requirements. The LCS passes, no further action is required. (LCS 160-603347/2-A)

Methods 9320: Radium-228 batch 603347: The matrix spike (MS) recovery was outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits. BAC-05-F-20230302-01 (240-181314-6[MS])

Methods 9320: Radium-228 batch 603347: The detection goal was not met for the following sample(s). Samples were prepped at a reduced volume due to the presence of matrix interferences: BAC-02-F-20230302-01 (240-181314-3) and BAC-05-F-20230302-01 (240-181314-6). Analytical results are reported with the detection limit achieved.

Methods 9320: Radium-228 batch 603347: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. BAC-02-F-20230302-01 (240-181314-3), BAC-05-F-20230302-01 (240-181314-6), BAC-05-F-20230302-01 (240-181314-6[MS]), BAC-05-F-20230302-01 (240-181314-6[MSD]), (LCS 160-603347/2-A), (LCSD 160-603347/3-A) and (MB 160-603347/1-A)

Method PrecSep_0: Radium-228 Prep Batch 602829: Insufficient sample volume was available to perform a sample duplicate for the following samples: BAC-07-F-20230302-01 (240-181314-1). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

Method PrecSep_0: The following samples did not form an efficient amount of pellet after the first precipitation during the into ingrowth process.

Method PrecSep-21: Radium-226 Prep Batch 160-602828: Insufficient sample volume was available to perform a sample duplicate for the following samples: BAC-07-F-20230302-01 (240-181314-1). A laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were prepared instead to demonstrate batch precision.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6020B: The continuing calibration verification (CCV) associated with batch 240-564732 recovered above the upper control limit for Beryllium. The samples associated with this CCV were below the reporting limit for the affected analyte; therefore, the data have been reported. The associated samples are impacted: BAC-07-F-20230302-01 (240-181314-1), DUP-003-BAC-07-F-20230302-01 (240-181314-2), BAC-02-F-20230302-01 (240-181314-3), BAC-18-F-20230302-01 (240-181314-4), BAC-06-F-20230302-01 (240-181314-5), BAC-05-F-20230302-01 (240-181314-6), BAC-04-F-20230302-01 (240-181314-7) and EB-001-F-20230302-01 (240-181314-8).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method SM 2320B: Sample duplicate was not analyzed due to instrument failure. BAC-18-F-20230302-01 (240-181314-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Method Summary

Client: Lightstone Generation Gavin Power LLC
Project/Site: Federal CCR Wells - App IV

Job ID: 240-181314-1

Method	Method Description	Protocol	Laboratory
6020B	Metals (ICP/MS)	SW846	EET CAN
7470A	Mercury (CVAA)	SW846	EET CAN
2320B-1997	Alkalinity, Total	SM	EET CAN
300.0-1993 R2.1	Anions, Ion Chromatography	EPA	EET CAN
9315	Radium 226 by GFPC	SW846	EET SL
9320	Radium-228 (GFPC)	SW846	EET SL

QC Sample Results

Client: Lightstone Generation Gavin Power LLC
 Project/Site: Federal CCR Wells - App IV

Job ID: 240-181314-1

Method: 6020B - Metals (ICP/MS)

Lab Sample ID: MB 240-564268/1-A
Matrix: Water
Analysis Batch: 564732

Client Sample ID: Method Blank
Prep Type: Total Recoverable
Prep Batch: 564268

Analyte	MB	MB	RL	MDL	Unit	D	Prepared	Analyzed	Dil Fac
	Result	Qualifier							
Antimony	ND		2.0	0.57	ug/L		03/05/23 14:00	03/08/23 16:39	1
